Antipopes

Antipopes were those who falsely claimed Papal Sovereignty. The dates and, in some cases, Roman numerals after the names account for occasional discrepancies in the succession of the Popes.

Name	Birthplace	Access.	End of reign	Name	Birthplace	Access.	End of reign
St. Hippolytus	Rome	217	235	Clement III	Parma	1080	1100
Novatian	Rome	251	...	Theodoric	1100
Felix II	Rome	355	365	Albert	1102
Ursinus	366	367	Sylvester IV	Rome	1105	1111
Eulalius	418	419	Gregory VIII	France	1118	1121
Lawrence	498	501	Celestine II	Rome	1124
Dioscorus	Alexandria	530	530	Anacletus II	Rome	1130	1138
Theodore	687	Victor IV	1138	1138
Paschal	687	Victor IV*	Montecello	1159	1164
Constantine	Nepi	767	769	Paschal III	1164	1168
Philip	768	768	Callistus III	Arezzo	1168	1178
John	844	Innocent III	Sezze	1179	1180
Anastasius	855	855	Nicholas V	Corvaro	1328	1330
Christopher	Rome	903	904	Clement VII	1378	1394
Boniface VII	Rome	974	974	Benedict XIII	Aragon	1394	1423
Boniface VII	984	985	Alexander V	Crete	1409	1410
(2nd time)				John XXIII	Naples	1410	1415
John XVI	Rossano	997	998	Felix V	1439	1449
Gregory	1012				
Benedict X	Rome	1058	1059				
Honorius II	Verona	1061	1072				

* Did not recognize his predecessor of 1138, who, only two months after claiming the Papacy, submitted to the rightful Pope, Innocent II.

Roman Catholic Pontiffs

Source for Catholic information: The National Catholic Almanac.

St. Peter, of Bethsaida in Galilee, Prince of the Apostles, was the first Pope. He resided first in Antioch and then for twenty-five years in Rome, where he suffered martyrdom in 64 or 67 of the modern era. He was followed by St. Linus.

Name	Birthplace	Access.	End of reign	Name	Birthplace	Access.	End of reign
St. Linus	Tuscia	67	76	Sabinianus	Tuscia	604	606
St. Anaclethus (Cletus)	Rome	76	88	Boniface III	Rome	607	607
St. Clement	Rome	88	97	St. Boniface IV	Marsi	608	615
St. Evaristus	Greece	97	105	St. Deusdedit (Adeodatus I)	Rome	615	618
St. Alexander I	Rome	105	115	Boniface V	Naples	619	625

				Pius XII	Rome	1939	

* If the triple removal of Benedict IX was not valid, Sylvester III, Gregory VI and Clement II were antipopes.
NOTE: This list of Popes, adapted from the *Annuario Pontificio*, is in accordance with the recent revisions made by Monsignor Mercati, Prefect of the Vatican's archives. All Popes before Sylvester I are listed as martyrs; other martyrs were: St. John I, St. Silverius and St. Martin I. The accession year is that during which the Pope was elected.

(NOTE: Anglicans consider the line of Archbishops unbroken from Augustine to the present day. Roman Catholics consider the office vacant since 1558, the death of Pole.)

History of the Christian Church in England

5th century	Arrival in England of Angles, Saxons and Jutes. Church isolated from Rome.	1646	Puritan rebellion. Presbyterianism becomes state religion.
597	Augustine sent to convert Saxons.	1660	Restoration. Power of Church of England restored under Charles II.
1534	Act of Supremacy makes king head of Church of England.	1739	John Wesley founds Methodism.
1554	Church again united with Rome under reign of Mary.	1829	Catholic emancipation.
1558	Church restored to Crown at accession of Elizabeth.	1833-45	Oxford Movement attempts to bring Church of England closer to ideals of ancient Church. This movement continues as important influence.
1611	King James version of Bible.

Religious and Secular Holidays, 1958

NEW YEAR'S DAY—Wednesday, Jan. 1—
A legal holiday in all states and the Dis-
trict of Columbia, New Year's Day has its
origin in Roman times, when sacrifices
were offered to Janus, the two-faced Ro-
man deity who looked back on the past
and forward to the future.

EPIPHANY—Monday, Jan. 6—Falls the
twelfth day after Christmas and com-
memorates the manifestation of Jesus as
the Son of God, as represented by the ado-
ration of the Magi, the baptism of Jesus,
and the miracle of the wine at the marriage
feast at Cana. Epiphany originally marked
the beginning of the carnival season pre-
ceding Lent, and the evening (sometimes
the eve) is known as Twelfth Night.

LINCOLN'S BIRTHDAY—Wednesday, Feb.
12—A legal holiday in many states, this
day was first formally observed in Wash-
ington, D. C., in 1866, when both houses of
Congress gathered for a memorial address
in honor of the late President.

ST. VALENTINE'S DAY—Friday, Feb.
14—This day is the festival of two 3rd-
century martyrs, both named St. Valen-
tine. It is not known why this day is
associated with lovers. It may derive from
an old pagan festival about this time of
year, or it may have been inspired by the
belief that birds mate on this day.

SHROVE TUESDAY—Feb. 18—Falls the
day before Ash Wednesday and marks the
end of the carnival season, which once
began on Epiphany but is now usually
celebrated the last three days before Lent.
In France, the day is known as Mardi Gras
(Fat Tuesday), and Mardi Gras celebra-
tions are also held in several American
cities, particularly in New Orleans. The
day is sometimes called Pancake Tuesday
by the English because of the need of
using up fats which were prohibited dur-
ing Lent.

ASH WEDNESDAY—Feb. 19—The first
day of the Lenten season, which lasts forty
days. Having its origin sometime before
A.D. 1000, it is a day of public penance and
is marked in the Roman Catholic Church
by the burning of the palms blessed on the
previous Palm Sunday. With his thumb,
the priest then marks a cross upon the

forehead of each worshipper. The Anglican
Church and a few Protestant groups in the
United States also celebrate the day, but
generally without the use of ashes.

WASHINGTON'S BIRTHDAY—Saturday,
Feb. 22—The birthday of George Wash-
ington is celebrated as a legal holiday in
every state of the Union, the District of
Columbia and all territories. The observ-
ance began in 1796.

ST. PATRICK'S DAY—Monday, March
17—St. Patrick, patron saint of Ireland,
has been honored in America since the
first days of the nation. There are many
dinners and meetings and perhaps the
most notable part of the observance is
the annual St. Patrick's Day parade on
Fifth Avenue in New York City.

PALM SUNDAY—March 30—Is observed
the Sunday before Easter to commemorate
the entry of Jesus into Jerusalem. The
procession and the ceremonies introducing
the benediction of palms probably had
their origin in Jerusalem.

GOOD FRIDAY—April 4—This day
commemorates the Crucifixion, which is
retold during services from the Gospel ac-
cording to St. John. A feature in Roman
Catholic churches is the Liturgy of the
Passion; there is no Consecration, the
Host having been consecrated the previous
day. The eating of hot cross buns on this
day is said to have started in England.

FIRST DAY OF PASSOVER (Pesach)—
Saturday, Apr. 5 (Nisan 15)—The Feast
of the Passover, also called the Feast of
Unleavened Bread, commemorates the es-
cape of the first-born of the Jews from
the Angel of Death, who took from the
Egyptians their first-born, thus fulfilling
the prophecy of Moses. As the Jews fled
Egypt, they ate unleavened bread, and
from that time the Jews have allowed no
leavening in the houses during Passover,
bread being replaced by matzoth.

EASTER SUNDAY—April 6—Observed
in all Christian churches, Easter com-
memorates the Resurrection of Jesus. It
is celebrated on the first Sunday after the
full moon which occurs on or next after
March 21 and is therefore celebrated be-

tween March 22 and April 25 inclusive. This date was fixed by the Council of Nicaea in 325.

ASCENSION DAY—Thursday, May 15—Took place in the presence of His apostles 40 days after the Resurrection of Jesus. It is traditionally held to have occurred on Mount Olivet in Bethany.

FIRST DAY OF SHABUOTH (Hebrew Pentecost)—Sunday, May 25 (Sivan 6)—This festival, sometimes called the Feast of Weeks, or of Harvest, or of the First Fruits, falls fifty days after Passover and originally celebrated the end of the seven-week grain harvesting season. In later tradition, it also celebrated the giving of the Law to Moses on Mt. Sinai, and both aspects have come down to the present.

PENTECOST (Whitsunday)—May 25—This day commemorates the descent of the Holy Ghost upon the Apostles fifty days after the Resurrection. The sermon by the Apostle Peter, which led to the baptism of 3,000 who professed belief, originated the ceremonies that have since been followed. "Whitsunday" is believed to have come from "white Sunday" when, among the English, white robes were worn by those baptized on the day.

MEMORIAL DAY—Friday, May 30—Also known as Decoration Day, Memorial Day is a legal holiday in most of the states and in the territories, and is also observed by the armed forces. In 1868, General John A. Logan, Commander in Chief of the Grand Army of the Republic, issued an order designating the day as one in which the graves of soldiers would be decorated. The holiday was originally devoted to honoring the memory of those who fell in the Civil War, but is now also dedicated to the memory of the dead of all wars.

FLAG DAY—Saturday, June 14—This day commemorates the adoption by the Continental Congress on June 14, 1777, of the Stars and Stripes as the U. S. flag. Although it is a legal holiday only in Pennsylvania, President Truman, on Aug. 3, 1949, signed a bill requesting the President to call for its observance each year by proclamation.

INDEPENDENCE DAY—Friday, July 4—The day of the adoption of the Declaration of Independence in 1776, celebrated in all states and territories. The observance began in the next year in the city of Philadelphia.

LABOR DAY—Monday, Sept. 1—Observed the first Monday in September in all states and territories. Labor Day was first celebrated in New York in 1882 under the sponsorship of the Central Labor Union, following the suggestion of Peter J. McGuire, of the Knights of Labor, that the day be set aside in honor of labor.

FIRST DAY OF ROSH HASHANA (Jewish New Year)—Monday, Sept. 15 (Tishri 1)—This day marks the beginning of the Jewish year 5718 and opens the Ten Days of Penitence closing with Yom Kippur.

YOM KIPPUR (Day of Atonement)—Wednesday, Sept. 24 (Tishri 10)—This day marks the end of the Ten Days of Penitence that began with Rosh Hashana and is the holiest day of the Jewish year. It is described in *Leviticus* as the "Sabbath of Sabbaths," and synagogue services begin the preceding sundown, resume the following morning, and continue through the day to sundown.

FIRST DAY OF SUKKOTH (Feast of Tabernacles)—Monday, Sept. 29 (Tishri 15)—This festival, also known as the Feast of the Ingathering, originally celebrated the fruit harvest, and the name comes from the booths or tabernacles in which the Jews lived during the harvest, although one tradition traces it to the shelters used by the Jews in their wandering through the wilderness. During the festival, many Jews build small huts in their back yards or on the roofs of their houses.

COLUMBUS DAY—Sunday, Oct. 12—A legal holiday in many states, commemorating the discovery of America by Columbus in 1492. Quite likely the first celebration of Columbus Day was that organized in 1792 by the Society of St. Tammany, or Columbian Order, more widely known as Tammany Hall.

ELECTION DAY (in certain states)—Tuesday, Nov. 4—Since 1845, by Act of Congress, the first Tuesday after the first Monday in November is the date for choosing Presidential electors. State elections are also generally held on this day.

VETERANS DAY—Tuesday, Nov. 11—Armistice Day was established in 1926 to commemorate the signing in 1918 of the Armistice ending World War I. On June 1, 1954, the name was changed to Veterans Day so as to honor all men and women who have served America in its armed forces.

THANKSGIVING—Thursday, Nov. 27—Observed nationally on the fourth Thursday in November by Act of Congress (1941), the first such national proclamation having been issued by President Lincoln in 1863, on the urging of Mrs. Sarah J. Hale, editor of *Godey's Lady's Book*. Most Americans believe that the holiday dates back to the day of thanks ordered by Governor Bradford of Plymouth Colony in New England in 1621 but scholars point out that days of thanks stem from ancient times.

FIRST SUNDAY OF ADVENT—Nov. 30—Advent is the season in which the faithful must prepare themselves for the advent of the Saviour on Christmas. The four Sun-

days before Christmas are marked by special church services.

FIRST DAY OF HANUKKAH (Festival of Lights)—Sunday, Dec. 7 (Kislev 25)—This festival was instituted by Judas Maccabaeus in 165 B.C. to celebrate the purification of the Temple of Jerusalem, which had been desecrated three years earlier by Antiochus Epiphanes, who set up a pagan altar and offered sacrifices to Zeus Olympus. In Jewish homes, a light is lighted the first night, and on each succeeding night of the eight-day festival, another is lighted.

CHRISTMAS (Feast of the Nativity)—Thursday, Dec. 25—The most widely cele-

brated holiday of the Christian year, Christmas is observed as the anniversary of the birth of Jesus. Christmas customs are centuries old. The mistletoe, for example, comes from the Druids, who, in hanging the mistletoe, hoped for peace and good fortune. Use of such plants as holly comes from the ancient belief that such plants blossomed at Christmas. Comparatively recent is the Christmas tree, first set up in Germany in the 17th century, and the use of candles on trees developed from the belief that candles appeared by miracle on the trees at Christmas. Colonial Manhattan Islanders introduced the name Santa Claus, a corruption of the Dutch name for the 4th-century Asia-Minor St. Nicholas.

1966	Feb. 23	Apr. 10	May 29	Sept. 5	Nov. 8	Nov. 24	Nov. 27
1967	Feb. 8	Mar. 26	May 14	Sept. 4	Nov. 7	Nov. 23	Dec. 3

Shrove Tuesday: 1 day before Ash Wednesday.

Palm Sunday: 7 days before Easter.

Maundy Thursday: 3 days before Easter.

Good Friday: 2 days before Easter.

Holy Saturday: 1 day before Easter.

Ascension Day: 10 days before Pentecost.

Trinity Sunday: 7 days after Pentecost.

Corpus Christi: 11 days after Pentecost.

Length of Jewish holidays (O=Orthodox, C=Conservative, R=Reform):

Passover: O & C, 8 days (holy days: first 2 and last 2); R, 7 days (holy days: first and last).

Shabuoth: O & C, 2 days; R, 1 day.

Rosh Hashana: O & C, 2 days; R, 1 day.

Yom Kippur: All groups, 1 day.

Sukkoth: All groups, 7 days (holy days: O & C, first 2; R, first only). O & C observe two additional days: Shemini

Atsereth (Eighth Day of the Feast) and Simhath Torah (Rejoicing of the Law). R observes Shemini Atsereth but not Simhath Torah.

Hanukkah: All groups, 8 days.

NOTE: All holidays begin at sundown on the evening before the date given.

Legal Holidays in the United States, Alaska, Hawaii & Puerto Rico

Holidays Widely Observed

January 1, New Year's Day: All states, D. C., Alaska, Hawaii, Puerto Rico.

February 12, Lincoln's Birthday: Arizona, California, Colorado, Connecticut, Delaware, Illinois, Indiana, Iowa, Kansas, Kentucky, Maryland, Michigan, Minnesota, Montana, Nebraska, New Jersey, New Mexico, New York, North Dakota, Ohio, Oregon, Pennsylvania, South Dakota, Tennessee, Utah, Vermont, Washington, West Virginia, Wisconsin, Wyoming, Alaska.

February 22, Washington's Birthday: All states, D. C., Alaska, Hawaii, Puerto Rico.

May 30, Memorial (or Decoration) Day: All states (except Alabama, Georgia, Mississippi, South Carolina, Texas), D. C., Alaska, Hawaii, Puerto Rico.

July 4, Independence Day: All states, D. C., Alaska, Hawaii, Puerto Rico.

September (1st Monday), Labor Day: All states, D. C., Alaska, Hawaii, Puerto Rico.

October 12, Columbus Day: All states (except Arkansas, D. C., Idaho, Iowa, Maine, Mississippi, Missouri, North Carolina, Oregon, South Carolina, South Dakota, Tennessee, Virginia, Wyoming), Puerto Rico.

November (1st Tuesday after 1st Monday), Election Day: Arizona, California, Colorado, Delaware, Florida, Illinois, Indiana, Iowa, Kentucky, Maryland, Michigan, Missouri, Montana, New Hampshire,* New Jersey, New York, North Carolina, North Dakota, Ohio, Oregon, Pennsylvania, South Carolina, South Dakota, Tennessee, Texas, Virginia, Washington, West Virginia, Wisconsin, Wyoming, Alaska, Hawaii, Puerto Rico.

November 11, Veterans Day (formerly Armistice Day): All states (except Virginia), D. C., Alaska, Hawaii, Puerto Rico.

November (4th Thursday), Thanksgiving Day: All states, D. C., Alaska, Hawaii, Puerto Rico.

December 25, Christmas: All states, D. C., Alaska, Hawaii, Puerto Rico.

Other Holidays

January 6, Three Kings' Day: Puerto Rico.

January 8, Battle of New Orleans: Louisiana.

January 11, De Hostos' Birthday: Puerto Rico.

January 19, Robert E. Lee's Birthday: Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Texas, Virginia (Lee-Jackson Day).

January 20, Inauguration Day (every 4 yrs.): D. C., Louisiana (Baton Rouge, only).

January 30, F. D. Roosevelt's Birthday: Kentucky.

February or March (1 day before Ash Wednesday), Mardi Gras (Shrove Tuesday): Alabama, Louisiana (in certain parishes and municipalities).

February 14, Statehood Day: Arizona.

March (first Tuesday), Town Meeting Day: Vermont.

March 2, Texas Independence Day.

March 15, Andrew Jackson's Birthday: Tennessee.

March or April (2 days before Easter), Good

Friday: California (12 M.-3 P.M.), Delaware, Florida, Illinois, Indiana, Louisiana, Maryland, Minnesota, New Jersey, North Dakota, Pennsylvania, Tennessee, Hawaii, Puerto Rico.

March or April (1 day after Easter), Easter Monday: North Carolina.

March 22, Emancipation Day: Puerto Rico.

March 25, Maryland Day.

March 26, Kuhio Day: Hawaii.

March 30, Seward's Day: Alaska.

April (date set by governor) Arbor Day: Utah.

April 12, Halifax Resolutions Anniversary: North Carolina.

April 13, Thomas Jefferson's Birthday: Alabama, Oklahoma.

April 16, De Diego's Birthday: Puerto Rico.

April 19, Patriots' Day: Maine, Massachusetts.

April 21, San Jacinto Day: Texas.

April 22, Arbor Day: Nebraska.

April 22, Oklahoma Day.

April 26, Confederate Memorial Day: Alabama, Florida, Georgia, Mississippi.

April (4th Monday), Fast Day: New Hampshire.

May (1st Friday), Arbor Day: North Dakota.

May 4, Rhode Island Independence Day.

May (2nd Sunday), Mother's Day: Arizona, Oklahoma.

May 10, Confederate Memorial Day: North Carolina, South Carolina.

May 20, Mecklenburg Independence Day: North Carolina.

June 3, Jefferson Davis' Birthday: Alabama, Florida, Georgia, Kentucky (Confederate Memorial Day), Louisiana, Mississippi, South Carolina, Tennessee (Confederate Decoration Day), Texas.

June 11, Kamehameha Day: Hawaii.

June 14, Flag Day: Pennsylvania.

June 20, West Virginia Day.

July 13, Nathan Bedford Forrest's Birthday: Tennessee.

July 17, Muñoz Rivera's Birthday: Puerto Rico.

July 24, Pioneer Day: Utah.

July 25, Constitution Day: Puerto Rico.

July 27, Barbosa's Birthday: Puerto Rico.

August 1, Colorado Day.

August 14, World War II Memorial: Arkansas, Rhode Island.

August 16, Bennington Battle Day: Vermont.

August 30, Huey P. Long Day: Louisiana.

September (1st Saturday after full moon), Indian Day: Oklahoma.

September 9, Admission Day: California.

September 12, Defenders' Day: Maryland.

September 16, Cherokee Strip Day: Oklahoma.

October 10, Oklahoma Historical Day.

October 18, Alaska Day.

October 31, Admission Day: Nevada.

November 1, All Saints' Day: Louisiana.

November 4, Will Rogers Day: Oklahoma.

November 19, Discovery Day: Puerto Rico.

December 26, Day after Christmas: South Carolina.

* State elections only.

AWARDS

NOBEL PRIZES

The Nobel prizes are awarded under the will of Alfred Bernhard Nobel, Swedish chemist and engineer, who died in 1896. The interest of the fund is divided annually among the persons who have made the most outstanding contributions in the field of physics, chemistry, and physiology or medicine, who have produced the most distinguished literary work of an idealist tendency, and who have contributed most toward world peace.

The prizes for physics and chemistry are awarded by the Swedish Academy of Science in Stockholm, the one for physiology or medicine by the Caroline Medical Institute in Stockholm, that for literature by the academy in Stockholm, and that for peace by a committee of five elected by the Norwegian Storting. The distribution of prizes was begun on December 10, 1901, the anniversary of Nobel's death. The amount of each prize varies with the income from the fund and since 1936 has stood at approximately £8,000.

No Nobel prizes were awarded for 1940, 1941 and 1942; prizes for Literature and Peace were not awarded for 1943.

Year	Literature	Peace
1901	René F. A. Sully Prudhomme (France)	Henri Dunant (Switzerland) and Frederick Passy (France)
1902	Theodor Mommsen (Germany)	Elie Ducommun and Albert Gobat (Switzerland)
1903	Björnstjerne Björnson (Norway)	Sir William R. Cremer (England)
1904	Frédéric Mistral (France) and José Echegaray (Spain)	Institut de Droit International (Belgium)
1905	Henryk Sienkiewicz (Poland)	Bertha von Suttner (Austria)
1906	Giosuè Carducci (Italy)	Theodore Roosevelt (U. S.)
1907	Rudyard Kipling (England)	Ernesto T. Moneta (Italy) and Louis Renault (France)
1908	Rudolf Eucken (Germany)	Klas P. Arnoldson (Sweden) and Frederik Bajer (Denmark)
1909	Selma Lagerlöf (Sweden)	Auguste M. F. Beernaert (Belgium) and Baron Paul H. B. d'Estournelles de Constant de Rebecque (France)
1910	Paul von Heyse (Germany)	Bureau International Permanent de la Paix (Switzerland)
1911	Maurice Maeterlinck (Belgium)	Tobias M. C. Asser (Holland) and Alfred H. Fried (Austria)
1912	Gerhart Hauptmann (Germany)	Elhu Root (U. S.)
1913	Rabindranath Tagore (India)	Henri La Fontaine (Belgium)
1915	Romain Rolland (France)	No award
1916	Verner von Heidenstam (Sweden)	No award
1917	Karl Gjellerup (Denmark) and Henrik Pontoppidan (Denmark)	International Red Cross
1919	Carl Spitteler (Switzerland)	Woodrow Wilson (U. S.)
1920	Knut Hamsun (Norway)	Léon Bourgeois (France)
1921	Anatole France (France)	Karl H. Branting (Sweden) and Christian L. Lange (Norway)
1922	Jacinto Benavente (Spain)	Fridtjof Nansen (Norway)
1923	William B. Yeats (Ireland)	No award
1924	Wladyslaw Reymont (Poland)	No award
1925	George Bernard Shaw (England)	Sir Austen Chamberlain (England) and Charles G. Dawes (U. S.)
1926	Grazia Deledda (Italy)	Aristide Briand (France) and Gustav Stresemann (Germany)
1927	Henri Bergson (France)	Ferdinand Buisson (France) and Ludwig Quidde (Germany)
1928	Sigrid Undset (Norway)	No award
1929	Thomas Mann (Germany)	Frank B. Kellogg (U. S.)
1930	Sinclair Lewis (U. S.)	Lars O. J. Söderblom (Sweden)
1931	Erik A. Karlfeldt (Sweden)	Jane Addams (U. S.) and Nicholas M. Butler (U. S.)
1932	John Galsworthy (England)	No award
1933	Ivan G. Bunin (Russia)	Sir Norman Angell (England)
1934	Luigi Pirandello (Italy)	Arthur Henderson (England)
1935	No award	Karl von Ossietzky (Germany)
1936	Eugene O'Neill (U. S.)	Carlos de S. Lamas (Argentina)
1937	Roger Martin du Gard (France)	Lord Cecil of Chelwood (England)
1938	Pearl S. Buck (U. S.)	Office International Nansen pour les Réfugiés (Switzerland)
1939	Frans Eemil Sillanpää (Finland)	No award
1944	Johannes V. Jensen (Denmark)	International Red Cross
1945	Gabriela Mistral (Chile)	Cordell Hull (U. S.)

Year	Literature	Peace
1946	Hermann Hesse (Switzerland)	Emily G. Balch and John R. Mott (U. S.)
1947	André Gide (France)	Am. Friends Service Com. (U. S.), Brit. Soc. of Friends' Service Council (Eng.)
1948	Thomas Stearns Eliot (England)	No award
1949	William Faulkner (U. S.)	Lord John Boyd Orr (Scotland)
1950	Bertrand Russell (England)	Ralph J. Bunche (U. S.)
1951	Pär Lagerkvist (Sweden)	Léon Jouhaux (France)
1952	François Mauriac (France)	Albert Schweitzer (Fr. Eq. Af.)
1953	Sir Winston Churchill (England)	George C. Marshall (U. S.)
1954	Ernest Hemingway (U. S.)	Office of U.N. High Commissioner for Refugees
1955	Halldór Kiljan Laxness (Iceland)	No award
1956	Juan Ramón Jiménez (Spain)	No award

Year	Physics	Chemistry	Medicine
1901	Wilhelm K. Roentgen, for discovery of Roentgen rays.	Jacobus H. van't Hoff, for laws of chemical dynamics and osmotic pressure in solutions.	Emil A. von Behring, for work on serum therapy against diphtheria.
1902	Hendrik A. Lorentz and Pieter Zeeman, for work on influence of magnetism upon radiation.	Emil Fischer, for experiments in sugar and purin groups of substances.	Sir Ronald Ross, for work on malaria.
1903	A. Henri Becquerel, work on discovery of spontaneous radioactivity. Pierre and Marie Curie; study of radiation.	Svante A. Arrhenius, for his electrolytic theory of dissociation.	Niels R. Finsen, for his treatment of lupus vulgaris, with concentrated light rays.
1904	John Strutt (Lord Rayleigh) for discovery of argon in investigating gas density.	Sir William Ramsay; discovery and determination of place of inert gaseous elements in air.	Ivan P. Pavlov, for work on the physiology of digestion.
1905	Philipp Lenard, for work with cathode rays.	Adolf von Baeyer, for work on organic dyes and hydroaromatic combinations.	Robert Koch, for work on tuberculosis.
1906	Joseph J. Thomson, for investigations on passage of electricity through gases.	Henri Moissan, for isolation of fluorine, and introduction of electric furnace.	Camillo Golgi and Santiago Ramón y Cajal, for work on structure of the nervous system.
1907	Albert A. Michelson, for spectroscopic and meteorologic investigations.	Eduard Buchner; discovery of cell-less fermentation and investigations in biological chemistry.	Charles L. A. Laveran, for work with protozoa in the generation of disease.
1908	Gabriel Lippmann, for method of reproducing colors by photography.	Ernest Rutherford, for investigations into disintegration of elements and chemistry of radioactive substances.	Paul Ehrlich and Élie Metchnikoff, for work on immunity.
1909	Guglielmo Marconi and Ferdinand Braun, for development of wireless.	Wilhelm Ostwald, for work on catalysis and investigations into chemical equilibrium and reaction rates.	Theodor Kocher, for work on the thyroid gland.
1910	Johannes D. van der Waals, for work with the equation of state for gases and liquids.	Otto Wallach, for work in the field of alicyclic compounds.	Albrecht Kossel, for achievements in the chemistry of the cell.
1911	Wilhelm Wien, for his laws governing the radiation of heat.	Marie Curie, for discovery of elements radium and polonium.	Allvar Gullstrand, for work on the dioptrics of the eye.
1912	Gustaf Dalén, for discovery of automatic regulators used in lighting lighthouses and light buoys.	Victor Grignard, for reagent discovered by and named after him. Paul Sabatier, for the methods of hydrogenating organic compounds.	Alexis Carrel, for work on vascular ligature and grafting of blood vessels and organs.

Year	Physics	Chemistry	Medicine
1913	H. Kamerlingh-Onnes, for work leading to production of liquid helium.	Alfred Werner, for linking up atoms within the molecule.	Charles Richet, for work on anaphylaxis.
1914	Max von Laue, for discovery of diffraction of Roentgen rays passing through crystals.	Theodore W. Richards, for determining atomic weight of many chemical elements.	Robert Bárány, for work on physiology and pathology of the vestibular system.
1915	W. H. Bragg and W. L. Bragg, for analysis of crystal structure by means of X rays.	Richard Willstätter, for research into coloring matter of plants, especially chlorophyll.	No award.
1917	Charles G. Barkla, discovery of Roentgen radiation of the elements.	No award.	No award.
1918	Max Planck, for discoveries in connection with quantum theory.	Fritz Haber, for synthetic production of ammonia.	No award.
1919	Johannes Stark, discovery of Doppler effect in Canal rays and decomposition of spectrum lines by electric fields.	No award.	Jules Bordet, for discoveries in connection with immunity.
1920	Charles E. Guillaume, for discoveries of anomalies in nickel steel alloys.	Walther Nernst, for work in thermochemistry.	August Krogh, discovery of regulation of capillaries' motor mechanism.
1921	Albert Einstein, for discovery of the law of the photoelectric effect.	Frederick Soddy, for investigations into origin and nature of isotopes.	No award.
1922	Niels Bohr, for investigations of structure of atoms and radiations emanating from them.	Francis W. Aston, for discovery of isotopes in nonradioactive elements and for discovery of the whole number rule.	In 1923 the 1922 prize was divided between Archibald V. Hill for discovery relating to heat-production in muscles; and Otto Meyerhof, for correlation between consumption of oxygen and production of lactic acid in muscles.
1923	Robert A. Millikan, work on elementary charge of electricity and photoelectric phenomena.	Fritz Pregl, for method of microanalysis of organic substances discovered by him.	Frederick G. Banting and John J. R. Macleod, for discovery of insulin.
1924	Karl M. G. Siegbahn, for investigations in X-ray spectroscopy.	No award.	Willem Einthoven, for discovering the mechanism of the electrocardiogram.
1925	James Franck and Gustav Hertz, for discovery of laws governing impact of electrons upon atoms.	In 1926 the 1925 prize was awarded to Richard Zsigmondy, for work on the heterogeneous nature of colloid solutions.	No award.
1926	Jean B. Perrin, for works on discontinuous structure of matter and discovery of the equilibrium of sedimentation.	Theodor Svedberg, for work on disperse systems.	Johannes Fibiger, for discovery of the Spiroptera carcinoma.
1927	Arthur H. Compton, discovery of Compton phenomenon; and Charles T. R. Wilson, for method of perceiving paths taken by electrically charged particles.	In 1928 the 1927 prize was awarded to Heinrich Wieland, for investigations of bile acids and kindred substances.	Julius Wagner-Jauregg, for use of malaria inoculation in treatment of dementia paralytica.

Year	Physics	Chemistry	Medicine
1928	In 1929 the 1928 prize was awarded to Owen W. Richardson, for work on the phenomenon of thermionics and discovery of the Richardson Law.	Adolf Windaus, for investigations on constitution of the sterols and their connection with vitamins.	Charles Nicolle, for work on typhus exanthematicus.
1929	Prince Louis Victor de Broglie, for discovery of the wave character of electrons.	Arthur Harden and Hans K. A. S. von Euler-Chelpin, for research of fermentation of sugars.	Christiaan Eijkman, for discovery of the antineuritic vitamins; and Sir Frederick G. Hopkins, for discovery of growth-promoting vitamins.
1930	Sir Chandrasekhara V. Raman, for work on diffusion of light and discovery of the Raman effect.	Hans Fischer, for work on coloring matter of blood and leaves and for his synthesis of hemin.	Karl Landsteiner, for discovery of human blood groups.
1931	No award.	Karl Bosch and Friedrich Bergius, for invention and development of chemical high-pressure methods.	Otto H. Warburg, for discovery of the character and mode of action of the respiratory ferment.
1932	In 1933 the prize for 1932 was awarded to Werner Heisenberg, for creation of the quantum mechanics.	Irving Langmuir, for work in realm of surface chemistry.	Sir Charles S. Sherrington and Edgar D. Adrian, for discoveries of the function of the neuron.
1933	Erwin Schrödinger and Paul A. M. Dirac, for discovery of new fertile forms of the atomic theory.	No award.	Thomas H. Morgan, for discoveries on hereditary function of the chromosomes.
1934	No award.	Harold C. Urey, for discovery of heavy hydrogen.	George H. Whipple, George R. Minot, and William P. Murphy, for discovery of liver therapy against anemias.
1935	James Chadwick, for discovery of the neutron.	Frédéric and Irène Joliot-Curie, for synthesis of new radioactive elements.	Hans Spemann, for discovery of the organizer-effect in embryonic development.
1936	Victor F. Hess, for discovery of cosmic radiation; and Carl D. Anderson, for discovery of the positron.	Peter J. W. Debye, for investigations on dipole moments and diffraction of X rays and electrons in gases.	Sir Henry H. Dale and Otto Loewi, for discoveries on chemical transmission of nerve impulses.
1937	Clinton J. Davisson and George P. Thomson, for discovery of diffraction of electrons by crystals.	Walter N. Haworth, for research on carbohydrates and vitamin C; and Paul Karrer, for work on carotenoids, flavins and vitamins A and B.	Albert Szent-Györgyi von Nagrapolt, for discoveries on biological combustion.
1938	Enrico Fermi, for identification of new radioactivity elements and discovery of nuclear reactions effected by slow neutrons.	Richard Kuhn, for carotinoid study and vitamin research (declined the prize).	Cornelle Heymans, for importance of sinus and aorta mechanisms in the regulation of respiration.
1939	Ernest Orlando Lawrence, for the development of the cyclotron.	Adolf Friedrich Johann Butenandt, for work on sexual hormones (declined the prize); and Leopold Ružička, work with polymethylenes.	Gerhard Domagk, antibacterial effect of prontosil.

Year	Physics	Chemistry	Medicine
1943	Otto Stern, for detection of magnetic momentum of protons.	George Hevesy De Heves, for work on use of isotopes as indicators.	Henrik Dam, Edward A. Doisy for the analysis of Vitamin K.
1944	Isidor Isaac Rabi, for work on magnetic movements of atomic particles.	Otto Hahn, for work on atomic fission.	Joseph Erlanger and Herbert Spencer Gasser, for work on functions of the nerve threads.
1945	Wolfgang Pauli, for work on atomic fissions.	Artturi Ilmari Virtanen, for research in the field of conservation of fodder.	Sir Alexander Fleming, Ernst Boris Chain, and Sir Howard Florey, for discovery of penicillin.
1946	Percy Williams Bridgman, studies and inventions in high-pressure physics.	James B. Sumner, crystallizing of enzymes. John H. Northrop and Wendell M. Stanley, preparing enzymes and virus proteins in pure form.	Herman J. Muller, hereditary effects of X ray on genes.
1947	Sir Edward Appleton, for discovery of layer which reflects radio short waves in the ionosphere.	Sir Robert Robinson, for research in plant substances.	Carl F. and Gerty T. Cori, for work on animal starch metabolism; Bernardo A. Houssay, for study of pituitary.
1948	Patrick M. S. Blackett, for improvement on Wilson chamber, discoveries in cosmic radiation.	Arne Tiselius, for biochemical discoveries and isolation of mouse paralysis virus.	Paul Mueller, for discovery of insect-killing properties of DDT.
1949	Hideki Yukawa, for mathematical prediction, 14 years ago, of the meson.	William Francis Glauque, for research in thermodynamics, especially effects of low temperature.	Walter Rudolf Hess, for research on brain control of body; and Antonio Caetano de Abreu Freire Egas Moniz, for development of brain operation.
1950	Cecil Frank Powell, for method of photographic study of atom nucleus, and for discoveries about mesons.	Otto Diels and Kurt Alder for discovery of diene synthesis enabling scientists to study structure of organic matter.	Philip S. Hench, Edward C. Kendall, and Tadeus Reichstein, for discoveries about hormones of adrenal cortex.
1951	Sir John Douglas Cockcroft and Ernest T. S. Walton, for work in 1932 on transmutation of atomic nuclei.	Glenn T. Seaborg and Edwin M. McMillan, for discovery of plutonium.	Max Theller, for development of anti-yellow fever vaccine.
1952	Edward Mills Purcell and Felix Bloch, for work in measurement of magnetic fields in atomic nuclei.	Archer John Porter Martin and Richard Laurence Millington Synge, for development of partition chromatography.	Selman A. Waksman, for co-discovery of streptomycin.
1953	Fritz Zernike, for development of "phase contrast" microscope.	Hermann Staudinger, for research in giant molecules.	Fritz A. Lipmann and Hans Adolph Krebs, for studies of living cells.
1954	Max Born, for work in quantum mechanics; and Walther Bothe, for work in cosmic radiation.	Linus Pauling, for study of forces holding together protein and other molecules.	John F. Enders, Thomas H. Weller and Frederick C. Robbins, for work with cultivation of polio virus.
1955	Polykarp Kusch and Willis E. Lamb, for work in atomic measurement.	Vincent du Vigneaud, for work on pituitary hormones.	Hugo Theorell, for work on oxidation enzymes.
1956	William Shockley, Walter H. Brattain and John Bardeen for developing electronic transistor.	Cyril Hinshelwood and Nikolai N. Semenov for parallel research on chemical reaction kinetics.	Dickinson W. Richards, Jr., André F. Cournand and Werner Forssmann for new techniques in heart disease.

(For 1957 Nobel prize winners, see Nobel prizes in index.)

¹ Citation for best foreign play. ² Citation for best musical. ³ Based on a novel by Arthur Koestler. ⁴ Based on Christopher Isherwood's *Berlin Stories*. ⁵ For "distinguished and original contribution to the theater" ⁶ Based on Sidney Howard's *They Knew What They Wanted*.

The Hall of Fame

The Hall of Fame for Great Americans, established in 1900 on the campus of New York University, is an open-air colonnade with busts and tablets for 83 of the 86 persons so far honored for national achievements. New names are voted on every five years by a College of Electors of approximately 100 men and women from all the states. To be elected to the Hall of Fame, an individual must have been dead more than 25 years (before 1922, the stipulation was 10 years), must have been a citizen of the U. S., and must receive a majority vote. Nominations may be made by any citizen. The next election will be held in 1960.

Names	Elected	Names	Elected
John A. Adams (statesman)	1900	James Kent (jurist)	1900
John Quincy Adams (statesman)	1905	Sidney Lanier (poet)	1945

AVIATION

Famous Firsts in Aviation

- 1782—First balloon flight. Jacques and Joseph Montgolfier of Annonay, Fr., sent up a small smoke-filled balloon about mid-November.
- 1783—First hydrogen-filled balloon flight. Jacques A. C. Charles, Paris physicist, supervised construction by A. J. and M. N. Robert of a 13-ft. diameter balloon which was filled with hydrogen. It got up to about 3,000 ft. and traveled about 16 mi. in a 45-min. flight (Aug. 27).
- 1783—First human balloon flights. A Frenchman, Jean Pilâtre de Rozier, made the first captive balloon ascension (Oct. 15). With the Marquis d'Arlandes, Pilâtre de Rozier made the first free flight, reaching a peak altitude of about 500 ft., and traveling about 5½ mi. in 20 min. (Nov. 21).
- 1784—First powered balloon. Gen. Jean Baptiste Marie Meusnier developed the first propeller-driven and elliptically-shaped balloon—the crew cranking three propellers on a common shaft to give the craft a speed of about 3 mi. per hr.
- 1784—First woman to fly. Mme. Thible, a French opera singer (June 4).
- 1793—First balloon flight in America. Jean Pierre Blanchard, a French pilot, made it from Philadelphia to near Woodbury, Gloucester Co., N. J., in a little over 45 min. (Jan. 9).
- 1794—First military use of the balloon. Jean Marie Coutelle, using a balloon built for the French Army, made two 4 hr. observation ascents. The military value of the ascents seems to have been in damage to the enemy's morale.
- 1797—First parachute jump. André-Jacques Garnerin dropped from about 6,500 ft. over Monceau Park in Paris in a 23-ft. diameter 'chute made of white canvas with a basket attached (Oct. 22).
- 1843—First air transport company. In London, William S. Henson and John Stringfellow filed articles of incorporation for the Aerial Transit Company (Mar. 24). It failed.
- 1852—First dirigible. Henri Giffard, a French engineer, flew in a controllable (more or less) steam engine-powered balloon, 144 ft. long and 39 ft. in diameter, inflated with 88,000 cu. ft. of coal gas. It reached 6.7 mi. per hr. on a flight from Paris to Trappe (Sept. 24).
- 1860—First aerial photographers. Samuel Archer King and William Black made two photos of Boston, still in existence.
- 1872—First gas-engine powered dirigible. Paul Haenlein, a German engineer, flew in a semi-rigid frame dirigible, powered by a 4-cylinder internal combustion engine running on coal gas drawn from the supporting bag.
- 1873—First transatlantic attempt. *The New York Daily Graphic* sponsored the attempt with a 400,000 cu. ft. balloon carrying a lifeboat. A rip in the bag during inflation brought collapse of the balloon and the project.
- 1897—First successful metal dirigible. An all-metal dirigible, designed by David Schwarz, a Hungarian, took off from Berlin's Tempelhof Field and, powered by a 16-hp. Daimler engine, got several miles before leaking gas caused it to crash (Nov. 13).
- 1900—First Zeppelin flight. Germany's Count Ferdinand von Zeppelin flew the first of his long series of rigid-frame airships. It attained a speed of 18 mi. per hr. and got 3½ mi. before its steering gear failed (July 2).
- 1903—First successful heavier-than-air machine flight. Aviation was really born on the sand dunes at Kitty Hawk, N. C., when Orville Wright crawled to his prone position between the wings of the biplane he and his brother Wilbur had built, opened the throttle of their home-made 12-hp. engine and took to the air. He covered 120 ft. in 12 sec. Later that day, in one of four flights, Wilbur stayed up 59 sec. and covered 852 ft. (Dec. 17).
- 1904—First airplane maneuvers. Orville Wright made the first turn with an airplane (Sept. 15); 5 days later his brother Wilbur made the first complete circle.
- 1905—First airplane flight over half an hour. Orville Wright kept his craft up 33 min. 17 sec. (Oct. 4.).
- 1906—First European airplane flight. Alberto Santos-Dumont, a Brazilian, flew a heavier-than-air machine at Bagatelle Field, Paris (Sept. 13).
- 1908—First airplane fatality. Lt. Thomas E. Selfridge, U. S. Army Signal Corps, was in a group of officers evaluating the Wright plane at Fort Myer, Va. He was up about 75 ft. with Orville Wright when the propeller hit a bracing wire and was broken, throwing the plane out of control, killing Selfridge and seriously injuring Wright (Sept. 17).
- 1910—First licensed woman pilot. Baroness Raymonde de la Roche of France, who

- learned to fly in 1909, received ticket No. 36 on March 8.
- 1910—First flight from shipboard. Lt. Eugene Ely, USN, took a Curtiss plane off from the deck of cruiser *Birmingham* at Hampton Roads, Va., and flew to Norfolk (Nov. 14). The following January he reversed the process, flying from Camp Selfridge to the deck of the battleship *Pennsylvania* in San Francisco Bay (Jan. 18).
- 1911—First U. S. woman pilot. Harriet Quimby, a magazine writer, who got ticket No. 37.
- 1913—First multi-engined aircraft. Built and flown by Igor Ivan Sikorsky while still in his native Russia.
- 1914—First aerial combat. In August, Allied and German pilots and observers started shooting at each other with pistols and rifles—with negligible results.
- 1915—First air raids on England. German Zeppelins started dropping bombs on four English communities (Jan. 19).
- 1918—First U. S. air squadron. The U. S. Army Air Corps made its first independent raids over enemy lines, in DH-4 planes (British-designed) powered with 400-hp. American-designed Liberty engines (Apr. 8).
- 1918—First regular airmail service. Operated for the Post Office Department by the Army, the first regular service was inaugurated with one round trip a day (except Sunday) between Washington, D. C., and New York City (May 15).
- 1919—First transatlantic flight. The NC-4, one of four Curtiss flying boats commanded by Lt. Comdr. Albert C. Read, reached Lisbon, Port. (May 27) after hops from Trepassy Bay, Nfld. to Horta, Azores (May 16-17), to Ponta Delgada (May 20). The Liberty-powered craft was piloted by Walter Hinton.
- 1919—First nonstop transatlantic flight. Capt. John Alcock and Lt. Arthur Whitten Brown, British World War I flyers, made the 1,900 mi. from St. John's, Nfld. to Clifden, Ire., in 16 hr. 12 min. in a Vickers-Vimy bomber with two 350-hp. Rolls-Royce engines (June 15-16).
- 1919—First lighter-than-air transatlantic flight. The British dirigible R-34, commanded by Maj. George H. Scott, left Firth of Forth, Scot. (July 2) and touched down at Mineola, L. I., 108 hr. later. The eastbound trip was made in 75 hr. (completed July 13).
- 1919—First scheduled passenger service (using airplanes). Aircraft Travel and Transport inaugurated London-Paris service (Aug. 25). Later the company started the first trans-channel mail service on the same route (Nov. 10).
- 1921—First naval vessel sunk by aircraft. Two battleships being scrapped by treaty were sunk by bombs dropped from Army planes in demonstration put on by Brig. Gen. William S. Mitchell (July 21).
- 1921—First helium balloon. The C-7, non-rigid Navy dirigible was first to use non-inflammable helium as lifting gas, making a flight from Hampton Roads, Va., to Washington, D. C. (Dec. 1).
- 1922—First member of Caterpillar Club. Lt. (later Maj. Gen.) Harold Harris bailed out of a crippled plane he was testing at McCook Field, Dayton, Ohio (Oct. 20), and became the first man to join the Caterpillar Club—those whose lives have been saved by parachute.
- 1923—First nonstop transcontinental flight. Lts. John A. Macready and Oakley Kelly flew a single-engine Fokker T-2 nonstop from New York to San Diego, a distance of just over 2,500 mi. in 26 hr. 50 min. (May 2-3).
- 1923—First autogyro flights. Juan de la Cierva, brilliant Spanish mathematician, made the first successful flight in a rotary wing aircraft in Madrid (June 9).
- 1924—First round-the-world flight. Four Douglas Cruiser biplanes of the U. S. Army Air Corps took off from Seattle under command of Maj. Frederick Martin (Apr. 6). 175 days later two of the planes (Lt. Lowell Smith's and Lt. Erik Nelson's) landed in Seattle after a circuitous route—one source saying 26,345 mi., another saying 27,553 mi.
- 1926—First polar flight. Then-Lt. Cmdr. Richard E. Byrd, acting as navigator, and Floyd Bennett as pilot, flew a trimotor Fokker from Kings Bay, Spitsbergen, over the North Pole and back in 15½-hr. flight (May 8-9).
- 1927—First solo transatlantic flight. Charles Augustus Lindbergh lifted his Wright-powered Ryan monoplane, *Spirit of St. Louis*, from Roosevelt Field, L. I., to stay aloft 33 hr. 39 min. and cover 3,600 mi. to Le Bourget Field outside Paris (May 20-21).
- 1927—First transatlantic passenger. Charles A. Levine was piloted by Clarence D. Chamberlin from Roosevelt Field, L. I., to Eisleben, Ger., in a Wright-powered Bellanca (June 4-5).
- 1928—First east-west transatlantic crossing. Baron Guenther von Huenefeld, piloted by German Capt. Hermann Koehl and Irish Capt. James Fitzmaurice, left Dublin for New York City (Apr. 12) in a single-engine all-metal Junkers monoplane. Some 37 hr. later they cracked up on Greely Island, Labrador. Rescued.
- 1928—First U. S.-Australia flight. Sir Charles Kingsford-Smith and Capt. Charles T. P. Ulm, Australians, and two American navigators, Harry W. Lyon and James Warner, crossed the Pacific from Oakland to Brisbane. They went via

- Hawaii and the Fiji Islands in a trimotor Fokker (May 31-June 8).
- 1928—First trans-Arctic flight. Sir Hubert Wilkins, Australian explorer, piloted by Carl Ben Eielson, flew from Point Barrow, Alaska, to Spitsbergen (mid-April).
- 1929—First of the endurance records. With Air Corps Maj. Carl Spaatz in command and Capt. Ira Eaker as chief pilot, an Army Fokker, aided by refueling in the air, remained aloft 150 hr. 40 min. at Los Angeles (Jan. 1-7).
- 1929—First blind flight. James H. Doolittle proved the feasibility of instrument flying when he took off and landed entirely on instruments (Sept. 24).
- 1929—First rocket engine flight. Fritz von Opel, German auto maker, stayed aloft in his small rocket-powered craft for 75 sec., covering nearly 2 mi. (Sept. 30).
- 1929—First South Pole flight. Comdr. Richard E. Byrd, with Bernt Balchen as pilot, Harold I. June, radio operator, and Capt. A. C. McKinley, photographer, flew a trimotor Fokker from the Bay of Whales, Little America, over the South Pole and back (Nov. 28-29).
- 1930—First Paris-New York nonstop flight. Dieudonné Coste and Maurice Bellonte, French pilots, flew a Hispano-powered Breguet biplane from Le Bourget Field to Valley Stream, L. I., in 37 hr. 18 min. (Sept. 2-3).
- 1931—First flight into the stratosphere. Prof. Auguste Piccard, Swiss physicist, and Charles Knipfer, ascended in a balloon from Augsburg, Ger., and reached a height of 51,793 ft. in a 17-hr. flight that terminated on a glacier near Innsbruck, Austria (May 27).
- 1931—First nonstop transpacific flight. Hugh Herndon and Clyde Pangborn took off from Sabishiro Beach, Japan, dropped their landing gear and flew 4,860 mi. to near Wenatchee, Wash., in 41 hr. 13 min. (Oct. 4-5).
- 1932—First woman's transatlantic solo. Amelia Earhart, flying a Pratt & Whitney Wasp-powered Lockheed Vega, flew alone from Harbor Grace, Nfld., to Ireland in approximately 15 hr. (May 20-21).
- 1932—First westbound transatlantic solo. James A. Mollison, British pilot, took a de Havilland Puss Moth from Portmarnock, Ire., to Pennfield, N. B. (Aug. 18).
- 1932—First woman airline pilot. Ruth Rowland Nichols, first woman to hold three international records at the same time—speed, distance, altitude—was employed by N. Y.-New England Airways.
- 1933—First round-the-world solo. Wiley Post took a Lockheed Vega, *Winnie Mae*, 15,596 mi. around the world in 7 days 18 hr. 49½ min. (July 15-22).
- 1937—First successful helicopter. Hanna Reitsch, German woman pilot, flew Dr. Heinrich Focke's FW-61 in free, fully-controlled flight at Bremen (July 4).
- 1939—First turbojet flight. Just before their invasion of Poland, the Germans flew a Heinkel He-178 plane powered by a Heinkel S3B turbojet (Aug. 27).
- 1942—First American jet plane flight. Robert Stanley, chief pilot for Bell Aircraft Corp., flew the Bell XP-59 *Airacomet* at Muroc Army Base, Calif. (Oct. 1).
- 1947—First piloted supersonic flight in an airplane. Capt. Charles E. Yeager, U. S. Air Force, flew the X-1, rocket-powered research plane built by Bell Aircraft Corp., faster than the speed of sound at Muroc Air Force Base, Calif. (Oct. 14).
- 1949—First round-the-world nonstop flight. Capt. James Gallagher and USAF crew of 13 flew a Boeing B-50A Superfortress around the world nonstop from Ft. Worth, Tex., returning to same point; 23,452 mi. in 94 hr. 1 min., with 4 aerial refuelings enroute (Feb. 27-Mar. 2).
- 1950—First nonstop transatlantic jet flight. Col. David C. Schilling (USAF) flew 3,300 mi. from England to Limestone, Maine, in 10 hr. 1 min. (Sept. 22).
- 1950—First jet-plane battle. Four U. N. jets attacked by 8 to 12 Communist jets near Sinuiju, Korea. One enemy jet reported shot down; no U. N. losses (Nov. 8).
- 1951—First solo across North Pole. Charles F. Blair, Jr., flew a converted P-51 (May 29).
- 1952—First jetliner service. De Havilland Comet flight inaugurated by BOAC between London and Rome (Apr. 21). Round trip: 4 hr. 46 min. flying time.
- 1952—First transatlantic helicopter flight. Capt. Vincent H. McGovern and 1st Lt. Harold W. Moore piloted 2 Sikorsky H-19s from Westover, Mass., to Prestwick, Scot. (3,410 mi.). Trip was made in 5 steps, with flying time of 42 hr. 25 min. (July 15-31).
- 1952—First transatlantic round trip in same day. British Canberra twin-jet bomber flew from Aldergrove, N. Ire., to Gander, Nfld., and back in 7 hr. 59 min. flying time (Aug. 26).
- 1955—First transcontinental round trip in same day. Lt. John M. Conroy piloted F-86 Sabrejet across U. S. (Los Angeles-New York) and back—5,085 mi.—in 11 hr. 33 min. 27 sec. (May 21).
- 1957—First round-the-world, nonstop jet plane flight. Maj. Gen. Archie J. Old, Jr., USAF, led a flight of 3 Boeing B-52 bombers, powered with 8 10,000-lb.-thrust Pratt & Whitney Aircraft J57 engines around the world in 45 hrs., 19 min.; distance 24,325 mi.; average speed 525 m.p.h. (Completed Jan. 18.)

DISTANCE, AIRLINE

International: 1,217.14 mi.

Elton J. Smith (U. S.) in Bell 47-D1 helicopter powered by 200-hp. Franklin; from Ft. Worth, Tex., to Niagara Falls, N. Y., Sept. 17, 1952.

DISTANCE, CLOSED CIRCUIT

International: 1,199.078 mi.

Lt. Col. Harry L. Bush and Maj. William C. Dysinger (USA) in Vertol H21-C helicopter powered by 1275-hp. Wright R-1820-103; Robbinsville, N. J., Aug. 11, 1956.

ALTITUDE

International: 26,931 ft.

Jean Boulet (France) in S.E. "Alouette" helicopter powered by 400-hp. Turbomeca Artouste II; Buc Airport, June 6, 1955.

MAXIMUM SPEED

International: 162.743 mph.

Maj. Roy L. Anderson (USMC), pilot, Robert S. Decker, co-pilot (U. S.), in Sikorsky HR2S-1 helicopter powered by 2 Pratt & Whitney R-2800-54 engines; Windsor Locks, Conn., Nov. 11, 1956.

SPEED FOR 100 K.M. (CLOSED COURSE)

International: 141.915 mph.

Cpts. Claude E. Hargett & Ellis D. Hill (USA) in Sikorsky H-34 helicopter powered by 1275-hp. Wright R-1820; Milford, Conn., July 12, 1956.

SPEED FOR 500 K.M. (CLOSED CIRCUIT)

International: 136.014 mph.

Cpts. Claude E. Hargett & Ellis D. Hill (USA) in Sikorsky H-34 helicopter powered by 1275-hp. Wright R-1820; Milford, Conn., July 12, 1956.

SPEED FOR 1,000 K.M. (CLOSED CIRCUIT)

International: 132.633 mph.

Cpts. Claude E. Hargett & Ellis D. Hill (USA) in Sikorsky H-34 helicopter powered by 1275-hp. Wright R-1820; Milford, Conn., July 12, 1956.

ASTRONOMY AND CALENDAR

Edited by

HUGH S. RICE, A.M., Ph.D.

Research Consultant, American Museum-Hayden Planetarium

Kinds of Time

Of the three main kinds of time (sidereal, apparent solar, and mean solar), the two kinds used in our calendar pages (local civil and standard time) are both types of mean solar time.

Sidereal time is used mostly in astronomy. It is nearly but not exactly star-time, and is measured by the diurnal rotation of the vernal equinox point in the sky. Sidereal days are shorter than solar days by about $3^m 56^s$ of mean time.

Apparent solar time is measured by the apparent diurnal rotation of the sun, and is the hour-angle of the sun $+12^h$. When the sun is at lower transit we have 0^h by apparent time; when it is on the upper meridian the apparent time is 12^h . The sun is not a good timekeeper, its eastward motion along the ecliptic being irregular, so apparent days are of unequal duration.

Mean solar time is the hour-angle of the "mean sun" $+12^h$. The mean sun is an imaginary body moving uniformly along the celestial equator. When the mean sun is on the lower meridian, the mean time is 0^h . The actual sun is sometimes ahead of and sometimes behind the mean sun, and the difference at any moment is the *equation of time*. When the sun is west of the mean sun, we have the "sun fast" situation, and the sun crosses the meridian before the mean sun; when the sun is east of the mean sun, we have the "sun slow" condition, and the sun transits after the mean sun. The equation of time helps in conversion of apparent and mean solar time. No clock runs on apparent time but ordinary clocks keep mean solar time in some form.

Local civil time (L.C.T.) is the mean solar time of a designated meridian, and its day begins with the mean sun at lower transit. This is midnight, the moment of zero hour (0^h). Ordinary clocks are not set to local civil time, because this time—

at any instant—varies with any change of longitude.

Standard time is the local civil time of a standard meridian, but used over an entire time-zone. In the U. S. the four zones (Eastern, Central, Mountain, and Pacific) are based upon the standard meridians of 75° , 90° , 105° , and 120° respectively. Ordinary clocks run on standard time, a type of mean solar time. In the summer, in certain localities, they run on advanced time (as daylight saving time) but this is only a clock-setting, and is actually standard time. Daylight saving time for a certain zone is the normal standard time of one zone to the east. While popular in certain metropolitan areas, it is not used for scientific observations. Advanced time is 1^h later on the clock-face than the normal standard time of the same zone.

Time zones. A time-zone chart of the entire world shows clearly how the world is divided into 24 time zones according to longitude. In a large proportion of countries, standard time is in use, and commonly the time on the clock-face reads 1 hour later for each zone east of a given zone, and 1 hour earlier for each zone west of a given zone. The zero time-zone of the world runs thru Greenwich, Eng., and the zones are so marked that the standard time at a particular station, added algebraically to the zone-number at the bottom gives the corresponding universal time or Greenwich civil time. For example, 3 A.M., M.S.T. $+ 7^h = 10^h$ U.T. or G.C.T.

Mexico, except for the northern part of Lower California, uses 90th-meridian time entirely. Canada uses the 4 standard-time zones of the U. S., and two others: (1) 60th-meridian or Atlantic standard time, for New Brunswick, Nova Scotia, and Quebec (east of 68° w.), 4^h earlier than Greenwich, and (2) 135th-meridian or Yukon standard time, 9^h earlier than Greenwich.

Newfoundland and the Labrador coast use Newfoundland standard time, $3^h 30^m$ earlier than Greenwich. Alaska uses 4 time-zones, those based on the following meridians of west longitude: 120° (Juneau), 135° or Yukon standard time (Yakutat), 150° or Alaska standard time (Fairbanks), and 165° (Nome).

The Date-line. At any moment of time, usually there are parts of two different but contiguous days going on at different places on the earth. The change of date is made at the date-line, an imaginary line that follows essentially the course of the 180° meridian in the Pacific Ocean. At points east of the date-line the calendar day is 1 day earlier than at places to the west of

the line. At a point just west of the date-line, let us suppose it is 13^h or 6 P.M., L.C.T., on Aug. 1. At the same moment it is 12^h at long. 90° e., 6^h at long. 0° , and 0^h at long. 90° w., all of the same date, Aug. 1. West of long. 90° w., it is not yet 0^h (midnight); hence between 90° w. and 180° the date must be July 31. As one crosses the date-line going eastward his watch remains the same but the date changes abruptly to 1 day earlier, so the traveler repeats part of a calendar day. As one crosses the line going westward the date changes abruptly to one day later, causing him to omit a calendar day. (According to actual practice, the change is made at night regardless of the true moment of crossing.)

On Using the Following Calendar Pages

Sun fast and sun slow. This is the equation of time, as previously discussed.

Sunrise and sunset. For accurate results, two corrections to the tabular values are necessary: (1) interpolation for latitude, and (2) reduction to standard time. When the observer is at a latitude between two given latitudes, he computes a time for sunrise or sunset that lies between the times shown for the given latitudes. (Our table of longitudes and latitudes is a guide for one's position, but a large atlas may be consulted.) For example, on Nov. 17, the sun sets at 4:42 P.M. at lat. 40° and at 4:30 at lat. 45° , the difference being -12^m . An observer at New York, N. Y., at lat. $40^\circ 48'$ would be about $\frac{1}{2}$ the distance between 40° and 45° . $\frac{1}{2}(-12^m) = -2^m$ and therefore at his station sunset occurs at 4:42 $- 2^m$ or 4:40 P.M., L.C.T. The station (long. $73^\circ 58'$ w.) is $1^\circ 2'$ or 1° east of the 75° standard meridian. (1) $(-4^m) = -4^m$; 4:40 $- 4^m = 4:36$ P.M., E.S.T. for sunset at New York.

In the sun and moon tables, the data has to be given in LOCAL CIVIL TIME. This is not standard time, but has to be reduced to standard time.

To reduce local civil time to standard time, decrease the L.C.T. by 4^m for every degree the station is east of the standard meridian, or increase the L.C.T. by 4^m for every degree the station is west of the standard meridian.

Moonrise and moonset. For accurate results at any station in the U. S., three corrections are needed: (1) interpolation for latitude, (2) correction for longitudes west of $82\frac{1}{2}^\circ$, and (3) reduction to standard time.

(1) Interpolation for latitude follows the same method as for the sun.

(2) Use of the *a*-factor. The moon tables are exact for the given latitudes and for longitude 75° w. The *a*-factor adapts them to any longitude in the U. S. For observers in the eastern states and as far west

as long. $82\frac{1}{2}^\circ$ [Port Huron, Mich., Mansfield, Ohio, Huntington, W. Va., Asheville, N. C., Tampa, Fla.], no *a*-factor is used. For stations in the 90° zone, between $82\frac{1}{2}^\circ$ and $97\frac{1}{2}^\circ$, use the *a*-factor in the column "90". The "*a*-factor, moonrise" is always to be added to the time of moonrise as derived from the main tables, and the "*a*-factor, moonset" is added to the time of moonset as derived. The boundary at $97\frac{1}{2}^\circ$, between the 90° and the 105° zones, runs through Grafton, N. Dak., Webster, S. Dak., Norfolk, Nebr., Salina, Kans., Oklahoma City, Okla., Fort Worth and Corpus Christi, Tex. Observers in the 105° zone, between $97\frac{1}{2}^\circ$ and $112\frac{1}{2}^\circ$ long., will use the " 105° " *a*-factor, and those west of $112\frac{1}{2}^\circ$ will use the " 120° " *a*-factor, the eastern boundary ($112\frac{1}{2}^\circ$) of the 120° zone going through Butte, Mont., Pocatello, Idaho, Panguitch, Utah, and Prescott, Ariz. These zones do not correspond to the irregular divisions of the standard-time belts.

(3) Change L.C.T. to standard time.

Ex., find moonrise time on March 12 at Dubuque, Iowa, long. $90^\circ 40'$ w., lat. $42^\circ 31'$ n. (a) Moonrise for lat. 40° is 1:03 A.M.; for 45° , 1:17 A.M. The increase is $+14^m$. The station is about $2^\circ 5/5^\circ$ or 0.5 the distance between 40° and 45° . $(0.5)(+14^m) = +7^m$. $1:03 + 7^m = 1:10$ A.M., L.C.T. (b) *a*-factor, moonrise, $= 2^m$, giving 1:12 A.M., L.C.T. (c) Reduce to standard time. $90^\circ 40' - 90^\circ = 0^\circ 40' = 1^\circ$ west of the standard meridian. (1) $(+4^m) = +4^m$; $1:12 + 4^m = 1:16$ A.M., C.S.T., moonrise for Dubuque, Iowa.

Moon's transit. This data indicates the local civil time of the moon crossing the observer's meridian. The time is the same for all latitudes. It is nearly correct for all longitudes in the U. S.; for more exact work use—for every day—a mean *a*-factor of 2^m , 4^m , 6^m . That is, for the 75° zone, use no correction; for the 90° zone add 2^m to the time in the tables; for the 105° zone add 4^m ; for the 120° zone add 6^m . Afterward, reduce the L.C.T. to standard time.

Longitude, Latitude, Time and Magnetic Declination of U. S. and Canadian Cities

The last column shows the magnetic declination or angle which the magnetic meridian makes with the true (geographic) meridian. The value being marked w or e, the north end of the compass needle points west or east respectively of true north by that number of degrees.

Morning and Evening Stars and Planets in 1958

MERCURY

Morning star, Jan. 1 to Mar. 3
 Evening star, Mar. 3 to Apr. 16
 Morning star, Apr. 16 to June 18
 Evening star, June 18 to Aug. 23
 Morning star, Aug. 23 to Oct. 5
 Evening star, Oct. 5 to Dec. 10
 Morning star, Dec. 10 to Dec. 31

VENUS

Evening star, Jan. 1 to Jan. 28
 Morning star, Jan. 28 to Nov. 11
 Evening star, Nov. 11 to Dec. 31

MARS

Morning star, Jan. 1 to Nov. 16
 Evening star, Nov. 16 to Dec. 31

JUPITER

Morning star, Jan. 1 to Apr. 17
 Evening star, Apr. 17 to Nov. 5
 Morning star, Nov. 5 to Dec. 31

SATURN

Morning star, Jan. 1 to June 13
 Evening star, June 13 to Dec. 20
 Morning star, Dec. 20 to Dec. 31

Mercury may be seen over the eastern horizon before sunrise for about 10 days before and after western elongation from the sun, and similarly over the western horizon after sunset around eastern elongation times. Western elongations occur Jan. 15 (Mercury in western Sagittarius), May 14 (in southeastern Pisces), Sept. 9 (in Leo, just west of Regulus), and Dec. 29 (in southern Ophiuchus, northeast of Antares). Eastern elongations occur Mar. 29 (in eastern Pisces), July 26 (in Leo, just south of Regulus), Nov. 20 (in Ophiuchus, east of Antares).

Venus is a bright morning star most of the year and as such is observable in the east before sunrise. The greatest brilliancy occurs March 4, the planet being in northwestern Capricornus, with magnitude -4.3 . Greatest elongation west occurs Apr. 8 in western Aquarius. A fairly close conjunction with the moon occurs March 16.

Mars in January is in Scorpius and Ophiuchus, north of Antares; in March it is in Sagittarius and Capricornus. By July 1 it is in Pisces, and by Oct. 1 it is in Taurus, northwest of Aldebaran. Shortly after this it retrogrades (until late Dec.) and is observable in Taurus and Aries. It is brightest around opposition in mid-November, with magnitude -2.0 .

Jupiter for the first $3\frac{1}{2}$ months is a morning planet east of Spica; then as an evening planet it continues all summer, moving slowly eastward, still not far from Spica. Beginning in the latter part of November it is observable again in the east in Libra. The moon passes by Jupiter, and is rather close on July 22, Aug. 19 and Sept. 16.

Saturn is seen in the morning sky during the first half of the year, in the southern part of Ophiuchus, northeast of Antares. It continues as an evening planet during the summer and autumn in about the same place among the stars. Mars is in conjunction with Saturn Jan. 23, Mars being south of Saturn.

Uranus is in Cancer all the year, east of the Beehive star cluster, and 10° to 15° west of the sickle of Leo. It is observable in binoculars except when too near the sun in July and August. On Aug. 26 Venus passes close to and just north of Uranus. *Neptune* is in Virgo all the year, around 12° east of Spica, and is visible in a low-power telescope, except when the sun is too near in Oct. and Nov. On Sept. 26, Jupiter and Neptune are in conjunction, Jupiter being less than 1° south of Neptune. *Pluto* is observable only in a large telescope, and is in Leo, a short distance east of the star Gamma Leonis.

The Sun

There are countless millions of far distant, superheated, self-luminous gaseous bodies called stars and each one is in itself a sun. Our Sun—the star around which our whole solar system revolves—is at a mean distance of 93,003,000 miles from the Earth, has a diameter of 865,390 miles, a surface temperature of about 11,000° F. and an interior temperature estimated at millions of degrees. It has a surface area approximately 12,000 times that of the Earth and in volume or bulk it is about 1,306,000 times the size of the Earth. It is a star of average size and temperature.

The Sun rotates on its axis and, by observation of Sun-spots (great whirling storms in the Sun's atmosphere) and Faculae (bright streaks or areas on the Sun's surface), astronomers have discovered that the rotational speed varies from approximately 24½ days at its equator to approximately 34 days near its poles. The Sun is just one star of the great Milky Way Galaxy that is rotating on its galactic axis at a rate that gives the Sun a galactic traveling speed of 175 miles per second. Furthermore, the Sun is moving toward a point known as "the apex of the Sun's way" in the constellation Hercules at a speed of about 12 miles per second.

What we see when we look at the Sun is the glowing surface called the Photosphere. Extending above this surface is the

Sun's atmosphere consisting of two layers, one extending outward for a few hundred miles from the Sun's surface and called the Reversing Layer for spectroscopic reasons, the other an outer layer extending several thousand miles and called the Chromosphere because of its reddish color due mostly to superheated hydrogen, helium and calcium. Solar "prominences" occasionally burst out from this layer and extend hundreds of thousands of miles above the Sun's surface. Beyond these layers of solar atmosphere and extending to great height is the outermost observable solar feature, the magnificent Corona of exceedingly slight density that provides an awesome spectacle for observers during total eclipses of the Sun.

Comets

In ancient times comets were supposed to be omens of sudden death, war, revolution or other dire events in human affairs and practically nothing was known of their true nature. They still offer puzzling problems to modern astronomers and, with about 1000 listed, new ones are being discovered and charted each year. In general, comets consist of a nucleus (sometimes lacking) surrounded by a head or "coma" (from the Greek word for hair because of its hazy appearance) from which extends the great tail that makes the passage of a comet through our skies such a striking

spectacle. Comets come in varying sizes but the average diameter of the heads of a large number of observed comets is about 80,000 miles and the tail length may stretch out to more than 100,000,000 miles. The density of comets is so low, however, that we can see the stars through them and there is more actual material in one cubic inch of ordinary air than in 2000 cubic miles of the tail of a comet.

The luminous tails of comets were believed, for many centuries, to be merely clouds high in our atmosphere. Tycho Brahe, eccentric Danish astronomer, proved that the comet he observed in 1577 was a celestial object far beyond the limit of the Earth's atmosphere. But the great forward step in the study of comets came when Edmund Halley, who became England's Astronomer Royal, carefully observed a comet in 1682, checked with previous observations, calculated its orbit and pre-

dicted its return to our skies in 1758 or 1759. Halley died in 1742 but the comet, now named after him, reappeared on schedule and a search through ancient records indicated that it had been observed in repeated appearances as far back as 240 B.C. Its last appearance was marked by its perihelion passage in 1910 and its next visit to our skies will occur in 1986. Halley's fulfilled prediction was the first definite proof that comets have regular orbits and time schedules or are, as the astronomers say, "periodic". The known "periods" (time intervals between appearances) of comets vary from the 3.3 years of Encke's Comet to thousands of years for wider travelers. No known great comets are scheduled for appearance in our sky this year.

A curious thing about comets is that their tails always trail from the head in a direction away from the Sun, so that when a comet is moving away from the Sun, the

20 Famous Comets

Year and no.	Name of comet	Period, years
1744	De Chéseaux's Comet
1806	Biela's Comet	6.7
1811 I	Great Comet of 1811	3000
1812	Di Vico's Comet	70.7
1815	Olbers' Comet	74.0
1819 I	Encke's Comet	3.3
1819	Pons-Winnecke Comet	6.0
1835 III	Halley's Comet	76.3
1843 I	Great Comet of 1843	512.4
1844 II	Great Comet of 1844	102,050
1858 VI	Donati's Comet	2,040 (?)
1864 II	Great Comet of 1864	2,800,000
1871 III	Tuttle's Comet	13.8
1874 III	Coggia's Comet	6,000 (?)
1879	Brorsen's Comet	5.6
1881 II	Tebbutt's Comet
1889 VI	Swift's 2nd Comet	7.0
1892 III	Holmes' Comet	6.9
1923	d'Arrest's Comet	6.6
1925 II	Comet Schwassmann-Wachmann	16.2

tall stretches out in front of the head. A comet's tail is so tenuous as to be almost a vacuum. The Earth passed through the tail of Halley's Comet in May, 1910, and on that occasion astronomers heard nothing, felt nothing and saw nothing to indicate that such passage had any observable effect on the Earth.

The Polar Auroras

It has been definitely established that Sun-spots are the direct cause of the greatest electrical show on Earth, a double feature, the Aurora Borealis (Northern Lights) and the Aurora Australis (Southern Lights). Sun-spots are magnetic storms of vast dimensions on the surface of the Sun and they shoot out electrified particles into space. Those that come toward the Earth are drawn toward the Earth's magnetic poles and consequently these magnetic poles are the radiating centers of those spectacular electromagnetic displays in the sky that we commonly call the "Northern Lights" or the "Southern Lights", depending upon whether we see them in the northern or southern hemisphere. The electrical particles from the Sun-spots strike the upper regions of our atmosphere where the component gases (nitrogen, oxygen and extremely minor amounts of argon, helium, neon, hydrogen and carbon dioxide) are very much rarefied and cause them to vibrate and glow in colors characteristic of the various elements, just as a neon sign glows when an electric charge is passed through it. The Sun-spots that cause auroral displays also cause the magnetic storms that interfere with radio reception, telephone, telegraph and cable traffic and other electromagnetic devices such as compasses and various aviation accessories.

There is an almost infinite variety to the auroral display. The lights may sweep across the sky in waves, in streamers or in folds like draped curtains. Or it may be a stationary glow. Sometimes there is little or no color in these waves, sheets or streamers of light. At other times the lights may be rich in red or green or pastel shades. Rose color and lavender and violet and purple are common. Blue is rare but has been seen. The "Northern Lights" have been seen as far south as New Orleans and the Florida peninsula and the "Southern Lights" have been seen as far north as New Zealand and Australia, but the maximum occurrence of these auroral displays is along the borders of the Arctic and Antarctic regions. Since these are atmospheric displays, our atmosphere must extend to the extreme height at which auroral lights are observed. Prof. Carl Störmer of the University of Oslo found this to be about 600 miles. He further found that no auroral lights came closer to the Earth's surface than 50 or 60 miles.

The Change of Seasons

It is enough to state that the earth is nearer to the sun in January than it is in July to convince those who live in the northern hemisphere that there must be some other explanation than that for the seasonal changes on our globe. The reason for the change in seasons is that the axis of rotation of the earth is inclined to the perpendicular of the plane of its orbit around the sun at an angle of approximately $23\frac{1}{2}^\circ$, so there is a proportional shifting of the angle of the sun's rays falling on different portions of the earth's surface at different times of the year.

On or about June 21, the north end of the earth's axis is inclined to its limit toward the sun. In the northern hemisphere this is our summer solstice. We then have our longest daylight period and a maximum of heat and light from the sun, whose perpendicular rays are falling on the Tropic of Cancer, $23\frac{1}{2}^\circ$ north of the equator. Six months later, on or about Dec. 22, the earth has reached a position in its orbit that finds the north end of its axis inclined at its maximum away from the sun. This is our winter solstice. We then have our shortest daylight period and a minimum of heat and light from the sun, which is over the Tropic of Capricorn, $23\frac{1}{2}^\circ$ south of the equator. Conditions are reversed in the southern hemisphere for obvious reasons. Their winter is our summer; their summer is our winter. Twice a year, at the equinoxes in March and September, the sun is on the equator, the day is of equal length all over the world and each hemisphere receives the same amount of light and heat from the rays of the sun.

If the effect in the change of the angle of the sun's rays on the earth's surface were instantaneous, our coldest period would be at the winter solstice and our warmest period at the summer solstice, but because of the blanket of atmosphere

around the earth and the cumulative effect in the heating or cooling of the earth's surface, we have "the lag of the seasons", which brings our warmest and coldest periods some 5 or 6 weeks after the sun is "farthest north" or "farthest south".

Seasons for the Northern Hemisphere, 1958

Eastern Standard Time

March 20, 10:06 P.M., sun enters sign of Aries; spring begins.
 June 21, 4:57 P.M., sun enters sign of Cancer; summer begins.
 Sept. 23, 8:10 A.M., sun enters sign of Libra; autumn begins.
 Dec. 22, 3:40 A.M., sun enters sign of Capricornus; winter begins.

* Period of revolution around the earth. † This is the rotation at the equator. ‡ Rotation of Venus is uncertain but is probably a few weeks. § The equatorial diameters of the earth, Jupiter, and Saturn are given; polar diameters are: earth, 7900.0 mi., Jupiter 82,789 mi., Saturn 67,170 mi.

SATELLITES. The number of known moons in the solar system is now as follows: for the earth 1; Mars 2; Jupiter 12; Saturn 9; Uranus 5; Neptune 2.
 OTHER DATA ON THE EARTH: Equatorial circumference, 24,902.4 mi.; total area, 196,949,970 sq. mi.; mass, 6.6 sextillion tons; mean diameter, 7,917.8 mi.

The Moon

Mars has 2 small satellites or moons, Jupiter has 12, Saturn 9, Uranus 5, and Neptune 2; but the earth has one comparatively large satellite, commonly called the moon. It is a globe 2,160 mi. in diameter with a surface deeply pitted by great craters. It has no atmosphere that astronomers can detect and shines only by reflected light of the sun. Though it seems very bright to us at "full moon," it reflects only about 7% of the light from the sun.

The orbit of the moon is elliptical, with the earth at one focus. The distance of the moon from the earth varies from 221,463 mi. (perigee) to 252,710 mi. (apogee), the average being 238,857 mi. The curious thing about the moon is that it revolves around the earth in 27 days, 7 hr., 43 min., 11.47 sec., and rotates on its axis in exactly the same time, which is why we always see the same side of the moon. Because of what are known as "librations in latitude and

longitude" and also a "diurnal libration," we do see "around the edge of the moon" at different times. In this manner a total of 59% of the moon's surface has been observed, but the other 41% never has been seen by the human eye.

Although the moon revolves around the earth in approximately 27½ days, it is, on the average, a matter of 29½ days (29 days, 12 hr., 44 min., 2.78 sec.) from one new moon to the other, because the earth is moving around the sun while the moon is moving around the earth and the "new moon" depends upon the relative positions of the 3 bodies.

If the planes of orbit of the earth and the moon coincided, there would be an eclipse of the moon at every "full moon" and an eclipse of the sun at every "new moon," but the 5° angle between the planes of orbit of the earth and the moon causes the moon on most of its revolutions to miss the earth's shadow and the moon's

* t refers to the year in question, for example 1958.

shadow on most trips to miss falling onto the earth.

The tidal effects of the moon are well known. The "spring tides" occur at the "full moon" and "new moon" and the "neap tides" at first quarter and last quarter.

Meteors and Meteorites

Meteorites are meteors that have come down to Earth. Meteors are masses of mineral or metal or both that plunge into the Earth's atmosphere at great speed and become incandescent from the resultant friction so that they are seen in the sky as "fireballs" (bolides) or "shooting stars". The "fireballs" are the larger, make a greater flash across the sky and sometimes explode. Meteors come in all sizes but most of them verge on the microscopic and burn up completely in the flash that makes them visible from 40 to 60 miles above the Earth's surface. Millions of them enter our atmosphere every twenty-four hours and probably not more than one or two a day survive to strike the ground as meteorites.

The largest meteorite ever found is located near Grootfontein, Southwest Africa, and its weight is estimated between 50 and 70 tons. The second largest meteorite (the Ahnighito, weight 34 tons) was found by Admiral Peary, Arctic explorer, at Cape York, Greenland, and is now on exhibition in the Hayden Planetarium, New York City. The largest meteorite found on United States soil is the Willamette (weight 15½ tons), which fell near Portland, Oreg., and is now in the American Museum of Natural History, New York City.

Craters produced by the fall of meteorites have been found in many countries. The first to be recognized and the largest known is Meteor Crater in Arizona, a depression about 4,000 feet in diameter, about 600 feet deep, and with exterior walls rising

150 feet above the surrounding plain. Meteor craters have been found near Odessa, Texas; Haviland, Kansas; in the Arabian Desert; in Central Australia and—a notable group of fifty or more—in the region of the Stony Tunguska River in northern Siberia.

Many meteors travel in swarms, believed in some cases to be disintegrated comets. The Perseid shower that occurs annually Aug. 10–14 is thought by some astronomers to be all that remains of Tuttle's Comet and the Leonid shower, which reaches a maximum in mid-November every 33 years, similarly is suspected of being what is left of Tempel's Comet. The Leonid shower of 1833 was the greatest meteor display of which astronomers have record.

Eclipses in 1958

(1) *Annular eclipse of the sun*, Apr. 18. The central path of the annular phase begins at sunrise in the Indian Ocean, south of India, and extends across Thailand and Formosa, and goes south of Japan, ending in the north Pacific Ocean at sunset. Partial phases are observable in eastern Asia, most of the islands of Australasia, and Alaska. The middle of the eclipse at Fairbanks, Alaska, occurs at 5:41 P.M., 165th-meridian standard time, with less than 0.2 of the sun obscured.

(2) *Partial eclipse of the moon*, May 3, visible in the western part of North America, the Pacific Ocean, eastern Asia, Australia, part of the Indian Ocean and Antarctica. The following are times of events, the magnitude of the eclipse being very small:

Moon enters penumbra	2:10 A.M. P.S.T.
Moon enters umbra	4:00 A.M.
Mid-eclipse	4:13 A.M.
Moon leaves umbra	4:26 A.M.
Moon leaves penumbra	6:16 A.M. P.S.T.

(3) *Total eclipse of the sun*, Oct. 12. The path of totality extends from a point in the South Pacific Ocean, considerably northeast of Australia, across the ocean to South America, where it ends at sunset near the coast of Chile. Only a few islands are in the path of totality, and except for New Zealand, little land is covered by the partial phases. At Tutuila, Samoan Islands, the eclipse is visible in the partial phase, about 0.9 of the sun being obscured.

Important Meteor Showers

Date	Meteor stream	Radiant in constellation
Jan. 1-4	Quadrantids.....	Boötes
Feb. 5-10	Alpha Aurigids.....	Auriga
Mar. 10-12	Zeta Boötids.....	Boötes

Dec. 10-13	Geminids.....	Gemini

The Atmosphere

The atmosphere of the Earth—the blanket of air that surrounds our globe and is essential to life—is of interest to astronomers because of its effect on the light that comes to us from heavenly bodies. Air has weight and volume. It refracts (bends or changes the direction of) light rays that enter it. Due to this refraction, we are able to see the Sun and the Moon before they rise and after they set. The “twinkling” of the stars is caused by convection currents in the air that have a rapidly changing refractive effect on the light from the stars. Our twilight is produced by the diffusion in the atmosphere of light from the Sun when it is below the horizon. Meteors become visible when they are heated to incandescence by friction with the atmosphere when, from outer space, they plunge into it at terrific speed.

Prof. Carl Störmer of the University of Oslo measured the height of the atmosphere and found it to be more than 600 miles, but about half of it by weight is below 18,000 feet. Although we may remark blandly that something is “as light as air,” the Earth’s atmosphere in bulk is of such enormous weight that at sea level it exerts a pressure of approximately 14.7 pounds per square inch. At higher levels, of course, the pressure is less.

Chemically, the atmosphere is composed of nitrogen (approximately 78 per cent by volume), oxygen (approximately 21 per cent by volume), and extremely minor amounts (about 1 per cent in all by volume) of argon, neon, helium, hydrogen and carbon dioxide. There is also present in the air a varying amount of water vapor, which is known as humidity and is distressing when the percentage is high in warm weather.

THE OTHER NATIONS OF THE WORLD

A GUIDE TO MAIN HISTORICAL, POLITICAL, ECONOMIC,
GEOGRAPHIC AND SOCIAL FACTS

Prepared by the Staff of ENCYCLOPAEDIA BRITANNICA

Under the direction of

WALTER YUST, Editor-in-chief and JOHN DODGE, Managing editor

A record of later events may be found in the section: NEWS RECORD OF 1957.

Afghanistan (Kingdom)

Area: 250,966 square miles.*

Population (est. 1953): 13,000,000*

(Pushtu, 60.5%; Tajik, 30.7%; Uzbek, 5%;
Mongolian and others, 3.8%).

Density per square mile: 51.8.

Ruler: Mohammed Zaher Shah.

Prime Minister: Mohammed Daud Khan.

Principal cities (est. 1953): Kabul, 310,-
000 (capital); Kandahar, 195,000 (trading
center); Herat, 150,000 (farming center).

Monetary unit: Afghani.

Languages: Pushtu (official), Persian.

Religion: Mohammedan (Sunni, 90%;
Shiah, 10%).

* Unofficial estimate (no census ever taken).

HISTORY. Wedged between Pakistan, Iran and the U.S.S.R. in southwestern Asia without outlet to the sea, Afghanistan did not become an independent state until 1747. Previously, it had been either a cluster of small states under nominal Arab rule, part of Mongol or Mogul empires, or dismembered among India, Persia and the Uzbeks. By the 19th century it had passed into the British sphere of influence.

In 1880, Great Britain recognized Abdur Rahman Khan as Emir and gave him an annual subsidy of more than \$500,000 to delegate management of his foreign relations to Britain. His son, Habibullah, succeeded him in 1901 and kept Afghanistan neutral in World War I despite strong pressure of pro-Turkish elements.

On Aug. 8, 1919, a treaty was signed making Afghanistan free and independent of all British control. The country maintained strict neutrality in World War II, and was admitted to the United Nations in Nov. 1946. Relations with Pakistan have been strained by a dispute over areas

inhabited by the Pathans in the North West Frontier Province.

GOVERNMENT. Under the 1932 Constitution, Afghanistan is a constitutional monarchy, with authority vested in the sovereign and Parliament, which has a Senate of 50 members, who are named for life by the sovereign, and a National Assembly of 171 elected members. Executive power is exercised by the sovereign and Cabinet headed by the Prime Minister.

Military service is compulsory. The army strength is about 75,000, supplemented by tribal bands. There is a small air force.

SOCIAL AND ECONOMIC CONDITIONS. Education is nominally compulsory. Primary schools exist in many parts of the country, but secondary schools only in Kabul and provincial capitals. There were 210,000 pupils in 360 primary schools in 1955. There were also 32 secondary and vocational schools and a university at Kabul.

Only a fifth of the soil is under cultivation, the greater part of the country being mountainous and rocky. Farming is confined to the fertile valleys and plains, sometimes with the aid of irrigation. Two crops a year are usually grown. Important ones include fruits and nuts, castor beans, cereals, madder, tobacco, cotton and vegetables. Wheat is the staple food. The fat-tailed indigenous sheep is a principal source of meat and wearing apparel.

Industry is still in a primary stage of development. Manufactures include cotton and woolen textiles and clothing, soap, leather, matches, beet sugar and furniture.

Among the leading exports are karakul skins (mostly to the U.S.), cotton, wool, rugs, carpets, spices and dried fruits. Most

of the trade normally is carried on through Pakistan; wool and cotton are exported to the U.S.S.R. in return for consumers' goods. Exports in 1954 (excluding the U.S.S.R., Communist China and other people's republics) were about U. S. \$40,143,000; imports were \$25,343,000.

Afghanistan has no railways or navigable streams. Camels and pack horses are still used by the natives, but motor transport is of increasing importance. The principal trade routes lead south through the Khyber and Khojak Passes to Pakistan, and north to the Uzbek and Turkmen Soviet Socialist Republics. There are about 4,000 miles of roads suitable for motor transport.

Both mineral and forest resources are largely unexploited. There are deposits of beryllium, chromite, coal, copper, gold, iron ore, lapis lazuli, oil, silver and sulfur.

NATURAL FEATURES; CLIMATE. Afghanistan, approximately the size of Texas, is split east to west by the Hindu Kush range of the Himalayas, rising in the east to heights of 24,000 feet. Except in the southwest, most of the country is covered by high snow-capped mountains and deep valleys. The few passes are deep and narrow. The climate ranges from extremes of below zero to more than 100° in the north; however, it is not so extreme in the south, although snowfall is heavy all over the country in winter. Rainfall, chiefly in the spring, is relatively light.

Albania (People's Republic)

(Republika Popullore e Shqipërisë)

Area: 11,100 square miles.

Population (census 1955): 1,394,310 (Albanian 99.8%; others, .2%).

Density per square mile: 125.6.

Chairman of Presidium: Hadji Leshi.

Premier: Mehmet Shehu

Principal cities (est. 1949): Tirana, 80,000 (capital); Scutari, 30,000 (northern trading center); Koritsa, 28,000 (farming center).

Monetary unit: Lek.

Language: Albanian.

Religions (est. 1953): Moslem, 65%; Greek Orthodox, 23%; Roman Catholic, 11%; others, 1%.

HISTORY. A tiny, backward state approximately the size of Maryland, Albania has acquired considerable importance since World War II because of its close ties with the Soviet Union and its strategic location at the mouth of the Adriatic. After the fall of the Roman Empire, Albania became part of the Byzantine Empire and was successively invaded by Goths, Serbs and Bulgarians. From 1014 to 1204 it was again under Byzantine rule. An alliance of Albanian chieftains (1444-66) under Skanderbeg failed to halt the advance of the Turks,

and the country remained under at least nominal Turkish rule for more than four centuries, until it proclaimed its independence on Nov. 28, 1912.

During World War I Albania was variously occupied by Italian, Greek, French, Serb and Austro-Bulgarian forces. On Aug. 2, 1920, Italy recognized Albanian independence and evacuated the country. Ahmed Zogu, Premier in 1922-23, ousted the government of Mgr. Fan Noli in 1924 and became President of a newly constituted republic in 1925. Three years later, after concluding pacts which placed Albania in Italy's sphere of influence, Zogu proclaimed himself King Zog I.

In 1939, Italy occupied the country in a matter of days. During the Greco-Italian war of 1940-41, the Greek armies pushed the Italians back from the Albanian border and occupied a large part of southern Albania. When Germany attacked Greece and Yugoslavia in April 1941, however, the Greeks withdrew quickly, and the Axis occupation of Albania was complete.

Albania was free of the Axis yoke by the end of 1944, and a leftist provisional government under Colonel General Enver Hoxha was established. That regime was confirmed in power by subsequent elections and full Soviet recognition, although provisional British and U. S. recognition was withdrawn in 1946. Since then, Albania has collaborated closely with the Soviet Union. It was admitted to the U.N. in 1955.

GOVERNMENT. Under its 1945 Constitution, Albania has a typical Soviet government. Supreme power is vested in the popularly elected National Assembly, to which the Cabinet, headed by the Premier, is responsible. The army, estimated at 30,000 men, has liaison with the U.S.S.R.

SOCIAL AND ECONOMIC CONDITIONS. Primary education is nominally compulsory, but illiteracy is high, especially among women. There is a teachers' college at Tirana.

Albania is still a primitive country where each family tries to provide most of its own needs. Nearly the whole population is engaged in combined farming and stock-raising. Only a small portion of the central part is fit for tilling. Corn is the chief crop. Others are wheat, tobacco, oats, barley, rye, spelt, olives and citrus fruit. Factories produce food products, cement and textiles; a large dam and power station was completed near Tirana in 1950.

Albania's postwar trade has been limited for the most part to the Soviet bloc. Important exports include crude oil, copper and chrome ore.

Railway mileage totaled only about 81 in 1951, linking Durazzo with Tirana and Elbasan. Good highways were developed by the Italians for strategic purposes, and the

Russians continued such construction. The only fully equipped port is Durazzo.

Mineral wealth, thought to be considerable, is relatively unexploited. The principal mineral is petroleum (production 1955: about 1,900,000 bbl.). Others include asphalt, bitumen, bauxite, chromite, copper, lignite and pyrites.

NATURAL FEATURES; CLIMATE. Albania is a mountainous state, largely over 3,000 ft. above sea level, with a narrow marshy coastal plain crossed by several rivers. The interior mountain plateaus and basins contain the centers of population.

The climate is typically Mediterranean, with dry, hot summers and moderate winters. Inland temperatures are lower than those on the coast.

Arabia

The Arabian peninsula is at the southwestern extremity of Asia. Its rich oil deposits and proximity to Palestine gave it special importance after World War II. Once a political unit, today it consists of the kingdoms of Saudi Arabia and Yemen, the British colony of Aden and six British protectorates.

The peninsula, with an area more than three times that of Texas, and an extreme length of 1,400 miles, is generally a plateau sloping gently eastward from a mountain range that averages 5,000 feet in elevation and runs along its entire west side within ten or fifteen miles of the Red Sea. The range reaches a maximum of 12,336 feet in Yemen to the southwest. Arabia has no rivers and no forests and is principally a desert dotted with many oases.

Most of the peninsula, particularly the interior, has a hot desert climate with frequent changes in temperature. The highlands of the Yemen and southwestern Saudi Arabia, however, together with parts of Oman, have a temperate climate. Jidda, on the Red Sea, has an average daily high temperature of 93° during August. Rainfall is almost nonexistent, amounting at Aden to less than two inches annually.

Mohammed united all Arabs in the 7th century A.D., and his followers, led by the caliphs, founded a great empire with its capital at Medina. Later, the caliphate capital was transferred to Damascus and then Baghdad, but Arabia retained its importance because of the holy cities of Mecca and Medina. In the 16th and 17th centuries, the Turks established at least nominal rule over much of Arabia, and in the middle of the 18th century it was divided into separate principalities.

Through agreements with local rulers, the British extended their rule over the southern and eastern coasts in the 19th century. At the same time, the Wahhabis,

a religious sect advocating strict adherence to Mohammed's teachings, gained control over most of central and eastern Arabia, and their work was the beginning of the present Saudi Arabia.

POLITICAL DIVISIONS OF ARABIA

Name	Area (sq. mi.)	Population (est. 1955)
Aden colony (British)	108	138,441†
Aden protectorate*	112,000	800,000
Bahrein Islands		
(Sultanate)*	231	120,000
Kuwait (Sheikdom)*	8,000	200,000‡
Oman and Masqat		
(Sultanate)*	82,000	550,000
Qatar (Sheikdom)*	8,500	35,000
Saudi Arabia		
(Kingdom)	617,760	7,000,000‡
Trucial Coast (Sheikdoms)*	5,792	80,000
Yemen (Kingdom)	75,290	4,500,000

* British protectorate. † 1955 census. ‡ Estimate 1952. § Estimate 1954.

Aden and Bahrein Islands. See British Commonwealth: Asia

Kuwait (Sheikdom)

Kuwait, on the northwestern shore of the Persian Gulf, is an independent state ruled by Sheik Abdullah as-Salim as-Subah. British protection, first exercised in 1898, has several times prevented it from being absorbed by Saudi Arabia. The territory surrounding Al Kuwait, its port, is largely desert; its trade consists of exchanging Arab goods from the interior for textiles, rice, sugar and other necessities. Kuwait's petroleum reserves, estimated at 9 billion barrels, are under concession to the Kuwait Oil Co. Ltd. (owned jointly by Gulf Oil Corp. and British Petroleum Co. Ltd.), which pays one-half its profits to the Sheik. Production, which began only in 1945, totaled 400,468,382 barrels in 1956. Production is concentrated at the Burgan field, from which petroleum is piped to the new port of Ahmadi for shipment.

South of Kuwait on the Persian Gulf is the Saudi Arabian-Kuwait neutral zone, which under the Treaty of Uqair (1922) belongs in undivided one-half interest to Kuwait and Saudi Arabia. It consists of about 2,000 sq. mi. of uninhabited desert. Oil was discovered in 1953 by American Independent Oil Co. Production totalled 11,724,585 barrels in 1956.

Oman and Masqat (Sultanate)

Occupying the mountainous southeastern part of the peninsula, Oman is nominally an independent state under the rule of Sultan Sayyid Sa'id bin Taimur. It has been under British protection since the 19th century. The state is best known for its date cultivation, and its riding camels are considered the best in the world. Trade

is mainly to and from India. The capital is Masqat (population 1954: 5,500).

Qatar (Sheikdom)

Qatar occupies the whole of the Qatar peninsula in the Persian Gulf. It is ruled, under British protection, by Sheik Ali bin Abdullah al-Thani. The whole area is claimed by Saudi Arabia. Oil deposits are being exploited by a subsidiary of the Iraq Petroleum Co.; output in 1956 was about 45,147,600 barrels.

Saudi Arabia. See page 703.

Trucial Coast (Sheikdoms)

This area, extending along part of the Gulf of Oman and the southern coast of the Persian Gulf, is ruled by 7 semi-independent sheiks. Treaties signed with Britain in 1853 and 1892 provided that the sheiks should not cede or sell any part of their land to any other power.

Yemen. See page 725.

Argentina (Republic)

(República Argentina)

Area: 1,084,359 square miles.

Population (est. 1956): 19,470,000 (approximately 97% of European descent, chiefly Spanish and Italian; 3% Indian and other).

Density per square mile: 18.0.

President: Pedro E. Aramburu.

Principal cities (est. 1955): Buenos Aires, 3,555,000 (capital and chief port); (est. 1950) Rosario, 467,937 (flour milling); Córdoba, 369,886 (northwest farming center); Avellaneda, 278,621 (industrial suburb of Buenos Aires); La Plata, 207,031 (seaport, meat packing); Lanús, 244,473 (suburb of Buenos Aires).

Monetary unit: Peso.

Languages: Spanish (official), Italian.

Religions (census 1947): Roman Catholic, 92.7%; Protestant, 1.9%; Jewish, 1.6%; others and unknown, 3.8%.

HISTORY. Discovered in 1516 by Juan Díaz de Solís, Argentina developed slowly under Spanish colonial rule. Buenos Aires was settled permanently in 1580 and became a prosperous city; the cattle industry of the Argentine pampas was thriving as early as 1600.

Invading British forces were expelled in 1806-07, and when Napoleon conquered Spain, the Argentinians set up their own government in the name of the Spanish King in 1810. On July 9, 1816, independence was formally declared. Internal dissension, particularly between Buenos Aires and the provinces, was put down under the dictator Juan Manuel de Rosas, who brought about unification from 1829 to 1852. Rosas was

overthrown by Justo José de Urquiza, who became the first President under the 1853 Constitution, modeled after that of the U. S.

President Hipólito Irigoyen (1916-22) refused to abandon Argentinian neutrality in World War I. Re-elected in 1928, Irigoyen, a radical, was ousted two years later by a conservative revolution led by General José Uriburu. The latter's successor, General Agustín Justo (1932-38) followed a moderate policy and undertook a large public works program.

Argentina proclaimed neutrality at the outbreak of World War II, but in general co-operated in hemispheric defense programs. In the closing months of the war, the nation declared war on the Axis (March 27, 1945) and signed the Act of Chapultepec the following April 4. Diplomatic recognition and admission to the U. N. followed. Juan D. Perón, then an army colonel, emerged as strongman and won the 1946 presidential elections. Congress became completely controlled by Perón supporters. Perón was re-elected Nov. 11, 1951.

Long-smouldering opposition, fanned by worsening relations with the Catholic Church, finally resulted in Perón's overthrow in Sept. 1955 in a coup led by the armed forces. Maj. Gen. Eduardo Lonardi became provisional President on Sept. 23; he was replaced by Maj. Gen. Pedro E. Aramburu on Nov. 13. Perón fled to exile and his party as well as Congress was dissolved. The provisional regime was beset by severe economic difficulties and counter-revolutionary activity.

GOVERNMENT; DEFENSE. Argentina is a federal union of 22 provinces and the federal district. Under the Constitution of 1853 (restored by decree on May 1, 1956), the President and Vice President are elected every 6 years by electors who are chosen by direct vote. The President appoints his Cabinet. The Vice President presides over the Senate but has no other powers. Neither is eligible for immediate re-election. The Congress has two houses—a 46-member Senate elected by the provincial legislatures for 9-year terms and a Chamber of Deputies popularly elected for 4-year terms.

Each province has its own constitution, elected governor, legislature and judiciary, but the President may in a crisis take over the local government.

Under legislation enacted Nov. 29, 1946, all men and women 12 to 50 are subject to military service at the President's discretion. Service from 20 to 22 is compulsory. Active strength of the army is about 100,000 officers and men.

The air force has about 150 combat planes. The navy in 1956 included two

modernized battleships, five light cruisers, 15 fleet destroyers and 9 frigates and escort vessels.

SOCIAL AND ECONOMIC CONDITIONS.

Education. Argentina's estimated illiteracy rate of 7-10 per cent is the lowest in all Latin America. Education is free, secular and compulsory between six and fourteen. In 1951 there were 15,874 primary schools with 2,446,138 pupils, 3,264 public and private secondary, normal and special schools with 521,132 students and 6 national universities with 90,201 students.

Agriculture. A farming and stock-raising nation, Argentina devotes some 40% of its area to pasture and 10% to cultivation. Cotton, sugar cane and fruits are important, and Argentina is the world's largest producer of yerba maté (Paraguay tea), the national beverage. The 1956 wine production (preliminary) was 354,300,000 gallons (1951-55 average: 412,000,000 gallons).

Estimated crop production in the 1955-56 crop year, in metric tons, was as follows: wheat, 5,250,000; rye, 653,000; barley, 951,000; oats, 732,000; maize, 3,870,000; rice, 174,000; linseed, 231,000.

Cattle raising predominates on the pampas, especially in Buenos Aires province. Sheep raising is more important in Patagonia. In 1956 there were 49,028,000 cattle, 47,371,000 sheep, 3,858,000 pigs; 7,265,000 horses (1951). Wool production in 1955 was about 355,000,000 lb., greasy basis.

Manufacturing. Industrial expansion was accelerated during World War II by the shortage of imports, but industry is still closely allied to agriculture. The principal industry is meat packing, followed by flour milling, textiles, sugar refining, dairy products, quebracho extraction and wine. Jeep production was started in 1956 and a steel plant is under construction at San Nicolas.

Trade. Statistics are as follows (in millions of U. S. dollars):

	1954*	1955*	1956*
Exports	1,079.4	928.1	910.9
Imports	954.8	1,172.5	1,113.3

* Provisional.

Leading exports in 1956 were cereals and linseed (31%), meat (26%), wool (13%) and hides (7%); leading imports, machinery and vehicles (23%), fuel and lubricants (12%) and iron and steel and manufactures (8%). Leading customers were the United Kingdom (23%), the U. S. (12%), Germany (12%) and Italy (6%); leading suppliers, the U. S. (20%), Germany (10%), Brazil (7%) and Venezuela (7%).

Communications. According to *Lloyd's Register*, the merchant fleet on June 30, 1956, was composed of 364 steamers and motorships (100 tons and over) aggregating 1,049,869 gross tons. Chief Argentine ports

are Buenos Aires, second only to New York in the western hemisphere, and La Plata, both on the Plata estuary; and Rosario, a port on the Paraná River.

Railway mileage is about 27,000, nearly all of which radiates outward from Buenos Aires. With the purchase in 1947-48 of the British- and French-owned railways, the system became government-owned. It is badly in need of repair and rehabilitation. Highway mileage is upwards of 300,000, largely unimproved. The air transport system is government-owned; domestic air routes extend as far south as Tierra del Fuego. Direct connections with the rest of the world are maintained by international airlines.

FINANCE. The preliminary 1957 budget projected total government expenditure at 31,300,000,000 pesos, but did not provide for anticipated operating deficits in the government transportation systems. The net public debt on Dec. 31, 1954, was 41,684,000,000 pesos; this figure did not include the debt of official agencies and of provincial and municipal governments.

NATURAL FEATURES AND RESOURCES. Second in South America to Brazil in size and population, Argentina is about 2,070 miles long and 860 miles wide at the maximum. In general, it is a plain, rising from the Atlantic to the Chilean border and the towering Andes peaks, including Aconcagua, 22,835 feet, the highest peak in the world outside Asia. The northern area of the Argentine plain is the swampy and partly wooded Gran Chaco. South of that to the Río Negro are the rolling, fertile pampas, rich for agriculture and grazing, and supporting most of Argentina's population. Next southward is Patagonia, a region of cool, arid steppes with some wooded and fertile sections. The eastern part of Tierra del Fuego, the island southern tip of South America, belongs to Argentina.

The three great rivers which make up the Plata system—the Paraná, Paraguay and Uruguay—are important commercial arteries in northern Argentina. Rosario and Santa Fé, 260 and 360 miles respectively above Buenos Aires on the Paraná, are accessible to ocean vessels.

Minerals. Argentina must import most of nearly every mineral it uses. Oil is produced in Patagonia (1956: 31,080,000 barrels), and there is small mining of coal, tungsten, lead, gold, zinc, tin, silver and beryllium. The government announced discovery of uranium deposits in Feb., 1947. Imports of fuels and lubricants totaled 9,993,900 metric tons in 1956.

Forests. The Gran Chaco area is the world's chief source of quebracho extract. Total exports of this tanning agent obtained from quebracho logs in 1954 were

153,000 metric tons, part of which was re-exported from Paraguay. Other forest products—hardwoods, dyewoods, lignum vitae, red quebracho, medicinal gums and other tannins—are consumed locally for the most part.

CLIMATE. Except for the northern Gran Chaco, which has mild winters and torrid summers, Argentina lies in the south temperate zone. The pampas region has an average temperature of 60°, and freezing is rare. Temperature extremes increase progressively southward. All over Argentina, January is the warmest month and June and July are coolest. At Buenos Aires, the mean annual temperature in January-February is about 73°; in June-July, 50°. The heaviest rainfall, over sixty inches a year, hits the Gran Chaco, while on the pampas it ranges from twenty inches in the west to forty in the northeast; at Buenos Aires it is 37.2 inches.

Austria (Republic) (Republik Österreich)

Area: 32,374 square miles.

Population (est. 1956): 6,983,000 (practically all Austrian).

Density per square mile: 215.7.

President: Dr. Adolf Schärf.

Chancellor: Julius Raab.

Principal cities (census 1951): Vienna, 1,766,102 (capital, industrial center); Graz, 226,453 (industrial center); Linz, 184,685 (industrial center); Salzburg, 102,927 (tourist center); Innsbruck, 95,055 (tourist center).

Monetary unit: Schilling.

Language: German.

Religions (census 1951): Roman Catholic, 89%; Protestant, 6%; others, 5%.

HISTORY. The history of Austria before World War I was largely that of the Austro-Hungarian Empire and the Hapsburgs. Its origin was in the province of Ostmark, separated from Bavaria and given to Leopold of Babenberg (A.D. 976) by the Holy Roman Emperor, Otto II. It was ruled by the Babenbergs until 1246, and later passed to Ottakar of Bohemia, who lost it to Rudolf of Hapsburg (1276). In 1437, the three kingdoms of Austria, Hungary and Bohemia were united under the rule of Albert V. For three centuries thereafter, despite almost constant warfare, the states remained for the most part under a single crown. The Hapsburgs gradually added to their possessions, until Charles V, during the 16th century, ruled a vast part of Europe. Emperor Francis I laid down the Holy Roman crown in 1806 at the height of the Napoleonic Wars, in which Austria and its allies were finally victorious. Influence in Germany was lost through defeat by Prussia in the Seven Weeks' War (1866). In 1867, the Dual Monarchy of Austria and Hungary was established,

united in the person of the sovereign, Franz Josef I, who ruled until 1916.

Following the defeat of the Central Powers in World War I, the republic of Austria was established in Nov. 1918. It was confined to its present borders by the Treaties of St. Germain (1919) and Trianon (1920). The years immediately following the war were a period of privation, dissension and riots, with Austrian currency becoming worthless and the nation bankrupt. Establishment of a semidictatorship by Engelbert Dollfuss, who had become Chancellor in 1932, was followed by an unsuccessful Socialist revolt (Feb. 1934) and an attempted Nazi *coup d'état*, which failed, although Dollfuss was killed. He was succeeded by Kurt von Schuschnigg, whose futile efforts to maintain Austria's independence ended (March 12, 1938) with the bloodless occupation of Austria by Germany. Hitler proclaimed the *Anschluss* of Germany and Austria the next day.

Following the liberation of Vienna (April 13, 1945), Dr. Karl Renner, veteran Socialist, formed a provisional government. Elections held Nov. 25, 1945, were won by the People's party, whose leader, Leopold Figl, became Chancellor. Dr. Renner was elected President of the Second Austrian Republic (Dec. 20, 1945). Upon his death (Dec. 31, 1950) Dr. Theodor Koerner was elected President and on the latter's death (Jan. 4, 1957) Dr. Adolf Schärf was elected (May 5, 1957); both were Socialists.

Julius Raab of the People's party headed coalition cabinets after the elections of 1953 and 1956.

After World War II, Austria within its 1937 frontiers was divided into 4 national zones, as was the city of Vienna. The 4 occupying powers (the U. S., the U.S.S.R., Britain and France) exercised control through the Allied Council for Austria.

Austria finally regained its independence on May 15, 1955, when a state treaty was signed with the 4 occupying powers. The U.S.S.R. exacted substantial economic concessions as the price for its consent; they included the delivery of 10,000,000 tons of oil over a 10-year period as well as the delivery of \$150,000,000 worth of goods over a 6-year period. Austria was admitted to the U.N. in 1955.

NATIONAL GOVERNMENT. Austria is a federal republic comprised of nine provinces (including Vienna), each of which has its own elected assembly for the control of regional affairs. The federal Parliament consists of two houses—the *Bundesrat* whose 50 members are chosen by the provincial assemblies and the *Nationalrat* whose 165 members are chosen by national election. The President of the republic is elected by national popular vote for a term of six years. The government is administered by the Chancellor

and his Cabinet. Party standing in the *Nationalrat* after the elections of May 13, 1956, was: People's party 82, Socialist 75, Independent 5, Communist 3.

SOCIAL AND ECONOMIC CONDITIONS. In 1955-56 Austria had 5,352 primary schools with 764,217 pupils, 300 secondary, vocational and teachers' training schools with 115,746 pupils, and 14 institutions of higher learning, including 4 universities, with 21,093 students. Illiteracy is practically unknown.

Agriculture employs approximately one-third of the population but the country is heavily dependent on imported food-stuffs. Mixed farming predominates. Rye and wheat are the leading cereals. Recent production figures (in metric tons):

	1954	1955	1956*
Wheat	451,832	549,186	570,500
Rye	369,973	416,107	434,000
Oats	334,264	363,704	374,400
Barley	311,537	345,738	384,500
Potatoes	2,791,627	3,005,356	3,229,000
Bett sugar	1,844,625	1,438,902	1,330,000

* Preliminary.

Stock raising and dairy farming both in the Alpine pastures and the lowlands of the east are of importance.

Austria is primarily an industrial country, with 41% of the population engaged in industry. Most important are the metallurgical, engineering, textile and food processing industries. Medium- and small-sized firms with specialized lines predominate, although a few large enterprises exist. Nationalized plants employ about one-fifth of the industrial labor force. The major steel and aluminum plants are in Upper Austria. Production (1956) included pig iron, 1,736,676 metric tons; steel, 2,077,548 tons; aluminum, 70,764 tons.

Trade statistics are as follows (in millions of schillings):

	1954	1955	1956
Exports	15,852	18,169	22,080
Imports*	16,478	23,013	25,080

* Commercial.

Leading exports in 1956 were iron and steel and other metals (23%), timber (21%) and machinery, electrical equipment and vehicles (13%); leading imports, machinery, electrical equipment and vehicles (20%), food (15%) and mineral fuels (14%). Leading customers were western Germany (24%), Italy (15%), Switzerland (6%) and the United Kingdom (5%); leading suppliers, western Germany (35%), the U. S. (13%), Italy (8%) and the United Kingdom (8%).

There were 3,750 miles of railway in 1954, partly electrified. Water traffic is restricted for the most part to the Danube River. The major river ports are Linz and, especially, Vienna, which is also an important rail, road and air center.

Recent government financial data are as follows (in millions of schillings):

	1955	1956*	1957*
Revenue	27,482	33,903	31,812
Expenditure	26,780	31,410	30,952

* Budget estimate.

The postwar public debt totaled 13,670,600,000 schillings in 1954.

NATURAL FEATURES AND RESOURCES; CLIMATE. Austria covers an area about equal to that of Scotland and includes much of the mountainous territory of the eastern Alps (about 92.3 per cent of the country is classified as mountainous). The country contains many snow-fields, glaciers and snow-capped peaks. The principal river is the Danube. Forests and woodlands cover about 40%.

Austria possesses valuable mineral resources. In Styria lies one of the largest European deposits of iron ore. Copper is mined in Salzburg, Tyrol and lower Austria, and lead and zinc in Carinthia. Other minerals include bauxite, graphite, sulfur and manganese. Fuel resources comprise small coal deposits in lower Austria and large quantities of lignite, found everywhere except in Salzburg. Large supplies of coal and coke must be imported, but extensive water power resources are available for exploitation. Petroleum fields in the Zistersdorf and Mühlberg areas, both in eastern Austria, produced an estimated 23,220,000 barrels in 1956. Production of lignite in 1956 was 6,729,816 metric tons; coal, 165,600 tons; iron ore (metal content 30%), 2,252,000 tons.

Variety is the keynote of Austria's climate. The mean annual temperature in the north ranges between 45° and 48°, and in no month does the average exceed 68°. Rainfall amounts to about 40 in. annually. In the Tyrol, mild winters and warm summers are customary.

Belgium (Kingdom)

(Royaume de Belgique—
Koninkrijk België)

Area: 11,779 square miles.*

Population (est. Dec. 31, 1956): 8,951,443 (Wallon, Flemish).

Density per square mile: 759.9.

Sovereign: Baudouin I.

Premier: Achille van Acker.

Principal cities (est. 1956, including certain suburbs): Brussels, 985,793 (capital); Antwerp, 611,035 (port and commercial center); Liège, 445,378 (iron and steel); Charleroi, 281,541 (industrial center); Ghent, 229,937 (textiles).

Monetary unit: Belgian franc.

Languages (est. 1954): Flemish, 50%; French, 34%; Flemish and French, 15%; German, 1%.

Religion: Predominantly Roman Catholic.

* Including areas taken over from Germany in 1949.

HISTORY. In 1914 and again in 1940, Belgium was crushed by German armies because its position in the Low Country area made it a highway on the invasion route to France. Highly industrial, a bit larger than Maryland and second most densely populated major European nation, Belgium emerged from World War II in fair economic condition; but, politically, the country suffered crisis after crisis in the struggle between conservatives and elements of the left, especially over the return of King Leopold III to the throne. Leopold returned to Belgium on July 22, 1950, but violent Socialist-led rioting forced him to agree to turn over his powers to his son, Baudouin. He formally abdicated July 16, 1951, and his son (born Sept. 7, 1930) became King as Baudouin I.

Perhaps the earliest mention of the Belgians in history was in 57-50 B.C., when they were conquered by Julius Caesar. In the Middle Ages the Belgian towns became wealthy and virtually autonomous as great textile centers. Belgium became part of Burgundy in 1385 and, later, part of the Spanish domains of Charles V. By the Treaty of Utrecht, in 1713, Belgium went to Austria, though retaining its autonomy, and from 1792 to 1815 it held a similar status under France. United with the Kingdom of the Netherlands by the Congress of Vienna in 1815, the Belgians revolted and proclaimed independence on Oct. 4, 1830, choosing as their sovereign Leopold of Saxe-Coburg. Taking the title of King Leopold I, he ruled 1831-65.

Belgium progressed peacefully under Leopold I and his son, Leopold II, who reigned from 1865 to 1909, and was succeeded by his nephew, Albert I (1909-34).

Despite heroic Belgian resistance under the personal leadership of Albert, the country was overrun by the Germans in 1914 and occupied throughout World War I. The treaty of 1919 gave Belgium the regions of Moresnet, Eupen and Malmédy, and a mandate over Ruanda-Urundi.

The Germans overran the country again in May 1940 with little difficulty, and Leopold III, who had succeeded his father on the latter's accidental death in 1934, surrendered unconditionally. He was taken prisoner, but a government-in-exile was set up in London; it returned to Belgium in Sept. 1944. In Leopold's absence his brother, Prince Charles, was elected Regent on Sept. 20, 1944, and held that post until Leopold returned to Belgium in 1950.

Economically, Belgium made more rapid progress than the rest of Europe in the immediate postwar years. Politically, however, controversy over the return of Leopold made matters difficult for postwar cabinets, composed for the most part of Christian Socialist and Liberal members.

In elections held June 4, 1950, the

Christian Socialists won control of the Chamber of Deputies; succeeding Christian Socialist Cabinets were headed by Jean Duvieusart (June 8), Joseph Pholien (Aug. 15) and Jean van Houtte (Jan. 15, 1952). The Christian Socialists lost their majority in the parliamentary elections of April 1954, and Socialist Achille van Acker formed a Socialist-Liberal Cabinet on April 22, 1954.

On March 17, 1948, Belgium signed a 50-year defense treaty with Britain, France, Luxemburg and the Netherlands; and in April 1949, the nation joined the North Atlantic alliance.

GOVERNMENT AND DEFENSE. Under the 1831 Constitution, Belgium is a constitutional monarchy. The ministers who constitute the Cabinet must have the confidence of Parliament, which consists of a 212-member Chamber of Deputies popularly elected and a Senate of varying membership, elected both directly and indirectly. All members serve for four years unless one or both houses are dissolved by the King, in which case new elections must be held in forty days. Belgium's nine provinces and 2,666 communes have Crown-appointed officials but retain considerable autonomy with their locally elected councils.

The election of Apr. 11, 1954, returned 95 Christian Socialists (as against 108 in the June 1950 election), 86 Socialists (77), 25 Liberals (20), 4 Communists (7) and 2 others to the Chamber of Deputies.

The authorized strength of the armed forces in 1957 was 145,300, of which 115,100 were in the army. The Belgian air force has about 350 combat planes. The navy, abolished in 1928, was reformed after World War II and in 1956 had 1 frigate, 6 ocean and 26 coastal minesweepers, 1 auxiliary transport and various other minor craft.

SOCIAL AND ECONOMIC CONDITIONS.

Education. Education, free and universal for children from six to fourteen, is under state control in three divisions: primary, intermediate and higher. Primary schools (Oct. 1953) numbered 8,745 with 826,328 pupils; secondary schools (1952), 774 with 140,047 students; technical schools, 1,513 with 176,766 students. There are four universities: official, Ghent and Liège; unofficial (private), Brussels and Louvain with a total of 17,879 students in 1953-54. There are also private schools, many under religious auspices. The rate of illiteracy in 1947 (7 years of age and over) was 3%. **Agriculture.** About 60% of the total area of Belgium is under cultivation, and one-half the farmed area is devoted to forage crops. Recent production figures for the country are as follows (in thousands of metric tons):

	1948-52	1954	1955	1956*
Wheat	525	589	731	597
Oats	483	452	481	484
Barley	244	247	280	288
Rye	222	245	220	196
Sugar beets	2,135	2,132	2,246	2,204
Potatoes	2,127	2,634	2,184	2,034

* Provisional.

Other crops are fodder beets, flax and fruit. The pastoral industry, especially dairy farming, flourishes. On Jan. 1, 1957, Belgium had 2,254,924 cattle, 1,276,437 hogs, 175,003 horses and 37,540 sheep.

Manufacturing. Belgium is one of the most highly industrialized nations in Europe, largely because of vast, readily accessible coal reserves. Industry chiefly processes imported raw materials for re-export in semifinished or finished form. Of primary importance are iron and steel, nonferrous metals, fabricated metal products and textiles. Steel production totaled 6,382,000 metric tons in 1956; pig iron, 5,761,000 tons. Associated with iron and steel is a considerable engineering industry, shipbuilding in Antwerp, and machinery and railway stock in Brussels. The centuries-old textile industry produces linen (Courtrai); cotton (the southeast); and synthetic fibers. Antwerp, using the output of mines in the Congo and Angola, rivals Amsterdam in diamond cutting.

Foreign trade is especially vital to the Belgian economy. The Belgian-Dutch-Luxembourg customs union (Benelux), established on Jan. 1, 1948, is one of the five great trading areas in the world. Trade of Belgium and Luxembourg (in billions of francs) is as follows:

	1954	1955	1956*
Exports	115.0	138.8	158.1
Imports	126.7	141.5	163.6

* Provisional.

Chief customers in 1956 were the Netherlands (22%), France (11%), western Germany (10%), the U. S. (10%) and Britain (6%). Leading sources of imports were western Germany (15%), the Netherlands (13%), the U. S. (12%), France (12%) and Britain (8%). Chief exports were iron and steel and products (28%), thread and fabric (7%), coal, coke and petroleum and products (6%), copper and products (5%) and precious stones and metals (5%).

Communications. Inland transportation facilities are highly developed. Railroad mileage is 3,127. Inland waterways total 983 mi., including the well-developed canal system; in 1955, rivers and canals carried 56,850,000 metric tons of freight. The highway system comprises 6,200 mi. of major roads, generally of good quality. The merchant fleet on June 30, 1956, totaled 192 ships (100 tons and over) aggregating 539,829 gross tons, according to *Lloyd's Register*. Sabena, the government-controlled

airline, flew 31,906,448 kilometers and carried 526,594 passengers in 1956.

Finance. Recent data are as follows (in billions of francs):

	1955*	1956†	1957‡
Revenue	90.4	85.4	89.9
Expenditure	95.3	105.4	102.4

* Provisional. † Revised budget estimate. ‡ Preliminary budget estimate.

The national debt, consolidated, short and middle term and at sight, totaled 339,220,461,571 fr. on Dec. 31, 1956.

NATURAL FEATURES AND RESOURCES; CLIMATE. The northern third of Belgium is a plain extending eastward from the coast of the North Sea. North of the Sambre-Meuse Rivers is a low plateau, varying from 250 to more than 600 feet in height, and to the south lies the Ardennes plateau, rising to a maximum of about 2,300 feet. The shallowness of the North Sea off Belgium precludes the development of good harbors; some of the port advantages of Antwerp, on the Schelde River, are offset by the fact that the approaches to it are through Dutch territory.

The principal mineral is coal; production in 1956 was 29,555,000 metric tons. The Ardennes coalfield, now nearly exhausted, extends southward into France. The Campine field lies in the northeast.

Forests cover about 20% of Belgium, but their products are relatively unimportant. Fishing is of little economic importance.

The climate is temperate. Ostend, on the sea, has an average annual temperature of 49° and annual rainfall of 27.5 inches, about like that of Chicago. Baraque Michel, in the Ardennes heights, has an average temperature of 43°, rainfall of 59.5 inches, and considerable snow in the winter.

BELGIAN COLONIAL EMPIRE

Country	Area (sq. mi.)	Population
Belgian Congo (colony)	904,991	12,956,950*
Ruanda-Urundi (U. N. trust terr.)	20,742	4,402,577†

* Dec. 31, 1956. † Dec. 31, 1955.

BELGIAN CONGO—Status: Colony.

Capital: Léopoldville (population Dec. 31, 1954: 299,806; Europeans, 16,887).

Governor General: Léo Pétillon.

Monetary unit: Congolese franc.

Foreign trade (1956)*: exports, 27,379,881,000 fr. (53% to Belgium, 14% to the U. S.); imports, 20,658,187,000 fr. (35% from Belgium, 20% from the U. S.). Chief exports: copper (40%), coffee (8%), cotton (7%), palm oil (5%), diamonds (5%).

Agricultural exports (1956, in metric tons)*: coffee, 52,045; cotton, 52,523.

Mineral exports (1956, in metric tons)*: copper (smelter), 253,748; tin (ingots), 2,717; cassiterite, 16,419; diamonds (mainly industrial), 13,445,866 carats; gold (refined), 370,000 oz.; cobalt, 4,639; zinc, 40,766; uranium.

Forest exports (1956, in metric tons)*: palm oil, 152,247; palm kernels, 35,496; rubber, 32,027; gum copal, 4,950.

* Including Ruanda-Urundi.

The mineral-rich Belgian Congo, in central Africa, with a narrow outlet to the Atlantic through the northwestern tip of Portuguese Angola, was acquired Nov. 15, 1908, by the Belgian state from the Belgian King, Leopold II. The latter had backed exploration of the area by the English explorer, H. M. Stanley, and in 1885 had been recognized by the great powers as personal sovereign and proprietor of the Congo Free State, as it was then called. The area is now administered by a Governor General responsible to the Cabinet minister for the colonies. The Governor General has unrestricted executive and legislative powers, and the colony has no representative institutions of its own. During World War II it furnished vital war materials to the Allies. The European population on Dec. 31, 1956, was 107,413, of whom 84,444 were Belgians.

RUANDA-URUNDI—Status: U. N. trust territory, united administratively with the Belgian Congo.

Capital: Usumbura.

Governor General: Léo Pétillon.

Principal products: tin, coffee, gold, cotton, hides.

Ruanda-Urundi, in east Africa, was assigned to Belgium as a mandate by the League of Nations at the end of World War I, before which it was a portion of German East Africa. It is administered under the direction of the Governor General of the Belgian Congo by a Vice Governor General. The area, placed under U. N. trusteeship in Dec. 1946, is largely mountainous, with livestock grazing the principal native activity. The European population on Dec. 31, 1955 was 6,052.

Bhutan (Kingdom)

Area: 19,305 square miles.

Population (est. 1955): 623,000 (mostly Bhotiya).

Density per square mile: 32.3.

Ruler: Maharaja Jigme Dorji Wangchuk.

Capital: Punakha.

Monetary unit: Indian rupee.

Language: Tibetan dialect.

Religion: Buddhism.

HISTORY. Bhutan is a semi-independent state lying on the southeast slope of the Himalayas, bordered on the north and east by Tibet and on the south and west by the Republic of India. The area is said to have been invaded and settled by Tibetan troops in the 9th century A.D. After almost a century of conflict between the Bhutanese and the British in India, British troops invaded the country in 1865 and negotiated an agreement under which Britain undertook to pay an annual allowance to Bhutan

on condition of good behavior. A treaty signed with India in Aug. 1949 increased this subsidy and placed Bhutan's foreign affairs under Indian control.

Until 1907, Bhutan's government was under the dual control of the clergy and laity, but the country is now ruled by a hereditary Maharaja.

The dominant people are the Bhotiyas, who are of Tibetan origin, speak a Tibetan dialect, and profess the same form of Buddhism as is prevalent in Tibet.

ECONOMIC CONDITIONS. The chief crops are rice, corn and millet; the fields, laid out on hillside terraces, are watered by an ingenious system of irrigation. Bhutan is famous for its small though sturdy mountain ponies. The chief industries are metal work, cloth weaving and fine basket and mat work. Trade is insignificant, and much of it is conducted by barter.

NATURAL FEATURES; CLIMATE. The whole of Bhutan presents a succession of lofty and rugged mountains running generally from north to south and separated by deep valleys. Mountains in the north reach a height of 24,000 feet. The climate varies according to the topography. In the extreme south, rainfall amounts to as much as 200-300 inches annually.

Bolivia (Republic) (República Boliviana)

Area: 424,162 square miles.

Population (est. Dec. 31, 1955): 3,198,139 (1950: Indian 52.9%, mestizo 32%, white 14.8%, others .3%).

Density per square mile: 7.5.

President: Hernán Siles Zuazo.

Principal cities (census 1950): La Paz, 321,063 (de facto capital); Cochabamba, 80,795 (commercial center); Oruro, 62,975 (tin mines); Potosí, 45,758 (mining); Sucre, 40,128 (legal capital).

Monetary unit: Boliviano.

Language: Spanish.

Religion: Roman Catholic.

HISTORY. Famous since Spanish colonial days for its mineral wealth, modern Bolivia was once a part of the ancient Incan Empire. After the Spaniards had defeated the Incas during the first part of the 16th century, Bolivia was subjected to the Spanish Viceroyalty of Peru, and its predominantly Indian population was reduced to slavery. During the successive South American revolts against Spain in the early 19th century, Upper Peru (as Bolivia was then called) was a vast battlefield contested by Spanish and patriot troops. The country finally won its independence in 1825; the new republic was named after Simón Bolívar, South America's famed liberator.

Bolivia's political history since independence has been extremely stormy. Since

1825 it has had more than 60 revolutions, 70 Presidents and 11 Constitutions. No elected President has served out his term.

Harassed by internal strife, Bolivia lost great slices of territory to three neighbor nations. Several thousand square miles and its outlet to the Pacific were taken by Chile after a disastrous war in 1879-83. In 1903 a piece of Bolivia's Acre province, rich in rubber, was ceded to Brazil. And in 1938, after a war with Paraguay, Bolivia gave up claim to nearly 100,000 square miles of the Gran Chaco.

Recent years have been typical of Bolivia's turbulent political history, with several illegal seizures of power culminating in a leftist revolution on July 21, 1946. Elections held May 6, 1951, were indecisive, although an exiled leftist, Victor Paz Estenssoro, obtained a near majority. A military junta which took over on May 16, 1951, was overthrown on April 11, 1952, and Paz Estenssoro became President on April 16. The three major tin mining companies were nationalized in Oct. 1952. Another leftist, Hernán Siles Zuazo, was elected President June 17, 1956.

GOVERNMENT. Under the 1938 Constitution, Bolivia is a republic, electing by popular vote a President every four years, an 18-member Senate every six years, and a 68-member Chamber of Deputies every four years. The President appoints the members of his Cabinet. The Indian majority was virtually disfranchised until July 1952, when the franchise was conferred on all those who had reached the age of 20, whether literate or illiterate.

Military service is compulsory, with a two-year training period beginning at nineteen and service on reserve until fifty. The army is fixed by law at 15,000, and there are about 12,000 federal police.

SOCIAL AND ECONOMIC CONDITIONS. Bolivia has an illiteracy rate estimated in 1950 at 69%, the highest in South America. A contributing factor is the high proportion of pure Indian population. In 1952, enrollment in primary schools was reported to be 234,000 and in secondary schools, 24,000. There are five universities.

The 5,000,000 acres under cultivation produce wheat, rice, sugar, potatoes, cacao, barley, maize, coca (source of cocaine), tobacco and cotton. Production of such basic foodstuffs as wheat and rice, however, is insufficient for domestic needs, and considerable quantities must be imported. Cattle are raised in the more temperate regions of the east and south, sheep in the departments of La Paz and Cochabamba, and llamas, alpacas and vicuñas, important sources of hides, wool and meat, are raised on the plateaus by Indians whose economy is largely dependent upon them. The fur-bearing chinchilla, a native of the colder plateau regions, is also bred.

Tin and other minerals comprise almost the whole of Bolivia's exports. Since the country is landlocked, foreign trade must pass through free ports in Chile and river ports on the Amazon. Trade statistics for 3 years (in millions of U. S. dollars):

	1953*	1954*	1955*
Exports	124.5	85.3	100.6
Imports	68.0	65.5	82.4

* Partially estimated.

Chief exports in 1955 were tin (58%), tungsten (16%), lead (6%) and zinc (6%). Leading customers in 1955 were the U. S. (60%) and the United Kingdom (33%); leading suppliers, the U. S. (38%), Argentina (10%) and Germany (9%).

Railway mileage (1955) totaled 1,690, largely in western Bolivia; the principal lines connect La Paz with the Chilean ports of Arica and Antofagasta. The highway system was estimated officially at 9,806 mi. in 1955. Airlines play an important role in Bolivian transportation. In the lowlands, thousands of miles of navigable streams are the chief means of transportation.

NATURAL FEATURES AND RESOURCES; CLIMATE. Landlocked Bolivia is a low alluvial plain throughout 60 per cent of its area toward the east, drained by the Amazon and Plata river systems. The western part, enclosed by two chains of the Andes, is a great plateau—the Altiplano—measuring 500 by 80 miles at an average altitude of 12,000 feet. More than 80 per cent of the population lives on the plateau, which also contains La Paz, the highest capital city in the world. Lake Titicaca, half the size of Lake Ontario, is one of the highest large lakes in the world, at an altitude of 12,507 feet. Islands in the lake hold ruins of the ancient Incan civilization.

Mining is the backbone of the economy. Tin, accounting normally for 70 per cent of Bolivian exports, is by far the most important mineral, most of it coming from the plateau regions of Potosí and Oruro. During World War II, Bolivia was the world's largest tin producer.

Mineral production in 1956 was: tin, 26,842 long tons; silver, 7,543,129 ounces; copper, 4,897 short tons; zinc, 18,818 tons. Antimony, gold, lead, manganese ore, tungsten concentrates, and mercury are also produced; and uranium deposits have been reported. Southern Bolivia is rich in oil, as yet relatively unexploited. Production in 1956 was about 3,201,000 barrels, six times the 1948-53 average.

From its lowland tropical forests, Bolivia gets rubber, quinine bark, almonds and brazil nuts, dyewoods, mahogany, quebracho and other hardwoods.

The climate varies from the humid heat of the equatorial lowlands in the east to

the arctic cold of the Andean peaks. In the lowlands, the average temperature is about 77°, with no great departures; rainfall is fairly heavy throughout the year (30-50 inches or more). At higher elevations in the west (to 11,000 ft.) the climate is temperate, with occasional winter frost. In the great central plateau, the weather is always cool. In La Paz it averages about 50.4°; rainfall there averages about 23 inches annually.

Brazil (Republic)

(Estados Unidos do Brasil)

Area: 3,287,195 square miles.

Population (est. July 1, 1956): 60,080,341 (1950: white, 61.7%; mestizo, 26.5%; Negro, 11.0%; other, 0.8%).

Density per square mile: 18.3.

President: Juscelino Kubitschek de Oliveira.

Principal cities (est. 1955): Rio de Janeiro, 2,725,274 (capital, chief port); (est. 1953) São Paulo, 2,500,000 (coffee and industrial center); Recife (Pernambuco), 560,000 (seaport); Salvador (Baía), 460,000 (seaport); Porto Alegre, 440,000 (seaport); Belo Horizonte, 430,000 (mining); Fortaleza (Ceará), 300,000 (seaport).

Monetary unit: Cruzeiro.

Language: Portuguese.

Religion: Roman Catholic, 95%.

HISTORY. Brazil, the only Latin American nation deriving its culture and language from Portugal, is by far the largest country in South America, covering nearly half the continent. In the Western Hemisphere it is second to Canada. In the world, it ranks after the U.S.S.R., China and Canada.

Brazil was discovered in 1500 by the Portuguese admiral, Pedro Alvares Cabral. Portuguese colonization efforts began in 1532 and Brazil became a royal colony seventeen years later. The later attempts of France and Holland to colonize Brazil were defeated by the Portuguese.

During the Napoleonic wars, the Prince Regent of Portugal (later King John VI) fled his country in advance of the French armies, and set up his royal court at Rio de Janeiro in 1808. John was drawn home by a revolution in 1820 and the Brazilians, after holding the seat of Portuguese government, rebelled at resuming colonial status and declared their independence in 1822 under Pedro, son of John VI. Harassed by trouble with his parliament, Pedro I abdicated in 1831 in favor of his five-year-old son, who became Emperor in 1840 as Pedro II. He was a popular monarch.

Despite his good works, however, Pedro II was forced to abdicate in 1889 following a military revolt, after which a republic was set up. Until 1893 Brazil was under

two military dictators, Marshal Deodoro da Fonseca and Marshal Floriano Peixoto. After a revolt against the latter in 1893, Brazil returned gradually to stability under a succession of civilian Presidents.

The President during World War I, Wenceslau Braz, co-operated with the Allies and declared war on Germany Oct. 26, 1917. Pres. Washington Luiz Pereira da Souza, 1926-30, had to cope with the world depression and was overthrown by a revolutionary group under Getúlio Vargas, who took over as provisional President.

Vargas' new Constitution in 1934 sharply curtailed state's rights and emphasized a nationalistic policy. In 1937 Vargas seized absolute power, setting up another Constitution which extended his term of office indefinitely. In World War II, Brazil co-operated well with the United Nations. Allied air bases were set up in Brazil, Brazilian naval forces patrolled the South Atlantic, and a Brazilian expeditionary force fought in Italy after the nation's declaration of war against the Axis in Aug. 1942.

Vargas was overthrown on Oct. 29, 1945. In elections held Dec. 2, 1945, victory went to the Vargas candidate—Gen. Eurico Gaspar Dutra, inaugurated as President on Jan. 31, 1946.

Vargas won the 1950 elections, taking office Jan. 31, 1951. He committed suicide Aug. 24, 1954, and was succeeded by João Café Filho. The latter took a leave of absence on Nov. 8, 1955, and a temporary regime took over until Jan. 31, 1956, when Juscelino Kubitschek de Oliveira of the Social Democratic party, who won the 1955 elections, was inaugurated.

GOVERNMENT AND DEFENSE. Under the Constitution of 1946, Brazil is a union of twenty states, five territories and one federal district. The President is popularly elected for a five-year term and may not succeed himself. The national Congress is composed of two houses—the Senate, whose members serve for eight-year terms, and the Chamber of Deputies, elected for four-year terms. Members of Congress are elected by equal, direct, compulsory and secret suffrage under a system of proportional representation.

Defense. Military service is compulsory beginning at twenty-one, with an initial training period of one year and service on reserve until forty-five.

The army received a considerable amount of U. S. lend-lease military goods during World War II. The air force, under a separate Ministry of Aviation since 1941, expanded during the war and took an active part in the Italian campaign.

The navy in Dec. 1956 had in active service 2 cruisers, 9 fleet destroyers, 8 frigates and escort vessels, 3 submarines, and other smaller craft.

SOCIAL AND ECONOMIC CONDITIONS.

Education. Education is free and compulsory; under the 1946 Constitution it is given in Portuguese only. According to the 1950 census, 48.6% of the population 10 years of age and over could read and write. In 1952 there were 82,254 primary schools with 5,651,564 pupils, (1954) 2,485 secondary schools with 535,775 students, 795 commercial schools with 97,531 students and 598 superior schools with 64,645 students. There are 11 universities, of which 3 are private (Catholic), 7 state and one federal.

Agriculture. Agriculture is a mainstay of Brazil's economy, but only 4 per cent of its area is under cultivation, the rest being grazing, forest, or non-productive land. Brazil leads the world in production of coffee and castor beans, and ranks second in cacao. Production and export of both coffee and cacao are government-controlled. Coffee production in the 1956-57 season totaled 18,000,000 bags of 132 lb. each. Official estimates for other leading crops are as follows (in thousands of metric tons):

	1953	1954*	1955*
Cacao	137.0	151.6	162.0
Rice (rough)	3,072.4	3,448.0	3,920.0
Wheat	771.7	823.8	983.0
Maize	5,984.3	7,071.2	6,906.0
Tobacco	132.1	134.3	141.0
Cotton	374.9†	447.3†	406.0‡

* Preliminary. † Unginned. ‡ Ginned.

Other crops include sugar cane, sisal, fruit, bananas and coconuts.

Livestock is raised nearly everywhere, with the great centers in the central and northern states. On Dec. 31, 1954, there were 35,555,000 hogs, 17,503,000 sheep and 61,442,000 cattle.

Manufacturing. Manufacturing is still primarily for domestic consumption, but industrialization is progressing rapidly.

Production figures for 1956 included cement, 3,490,400 metric tons; pig iron, 1,144,800 tons; steel, 1,333,200 tons. The state of São Paulo is by far the leading industrial area.

Trade statistics for 3 years follow (in millions of U. S. dollars):

	1954	1955	1956
Exports	1,561.8	1,423.3	1,482.6
Imports	1,633.5	1,306.8	1,233.9

Leading exports in 1956 were coffee (70%), cotton (6%) and cacao (5%). Leading customers were the U. S. (50%), Germany (6%), Argentina (4%) and Sweden (4%); leading suppliers, the U. S. (29%), Venezuela (10%), Germany (6%) and the Netherlands Antilles (5%).

Major imports include machinery, food-stuffs (largely Argentine wheat), vehicles and petroleum products.

Communications. The coastwise and river steamers are the main links between north and south Brazil, especially within the Amazon basin where inland waterways are the only means of land communication. Navigable waterways total 26,713 miles. Coastwise traffic is restricted to Brazilian ships, but the Amazon is open to all ships. According to *Lloyd's Register*, the merchant marine had 386 vessels (100 tons and over) aggregating 862,066 gross tons on June 30, 1956.

Railway mileage (Dec. 31, 1954) was 23,-104, mostly located south of Recife. Railway development has been hampered by natural obstacles, especially by coastal mountains, but extensive government and private building is under way. Highways and roads totaled 225,000 mi. on Dec. 31, 1954. Brazil is served by numerous domestic and foreign airlines; mileage flown by domestic lines in 1955 was 70,287,000; passengers carried totaled 2,988,724.

Finance. Recent data are as follows (in billions of cruzeiros):

	1954	1955	1956*	1957*
Revenue	46.5	55.7	71.0	93.0
Expenditure	53.7	63.3	71.5	111.0

* Budget estimate.

NATURAL FEATURES AND RESOURCES; CLIMATE. Brazil covers about three-sevenths of South America, extends 2,965 miles north-south, 2,691 miles east-west, and borders every South American state except Chile and Ecuador. Its area would more than blanket that of the U. S.

There are two principal physical divisions of the Brazilian surface. The lowlands are made up of the heavily forested tropical river basin of the Amazon, the world's largest drainage area; and the less heavily forested basin of the Plata to the south. The intermediate highland is a vast plateau, 1,000 to 3,000 feet above sea level, traversed by several low mountain ranges, and extending almost from the seacoast to the Bolivian frontier and south to the plains of Rio Grande do Sul. The Central plateau comprises more than half of the country and, with the narrow coastal plain, supports 90% of the population.

More than a third of Brazil is drained by the Amazon and its more than 200 tributaries. The Amazon is navigable for ocean steamers to Iquitos, Peru, 2,300 miles upstream. Southern Brazil is drained by the Plata system—the Paraguay, Uruguay and Paraná Rivers. The most important stream entirely within Brazil is the São Francisco, navigable for a thousand miles but broken near its mouth by the 260-foot Paulo Afonso Falls, with estimated potential of 1,000,000 horsepower.

Mineral Resources. Brazil's vast mineral

resources are among her least developed assets. The most important are coal (estimated reserves of 5,000,000,000 tons; estimated 1955 production, 2,292,000 metric tons) and iron ore (metal content 65%), found mainly in Minas Gerais (1955 output, 3,600,000 metric tons). Other important minerals are gold, (1955) 111,500 troy oz.; manganese ore, (1955) 380,000 tons; petroleum, (1956) 3,885,000 barrels (over 10 times the 1950 output); diamonds; bauxite; tungsten; silver; quartz crystals; uranium; chrome ore; graphite and titanium.

Forests and Fisheries. More than half of Brazil's total area is forested, but the extensive resources are relatively undeveloped. The largest single forest commodities are timber, chiefly pine from the southern states, and the wax of the carnauba palm, used for insulation and phonograph records and produced commercially only in

Brazil (exports 1955: 12,000 metric tons). Rubber production, mostly in the Amazon basin, was estimated in 1955 at 21,600 metric tons, but it has not developed as extensively as was once expected. Other forest products are Brazil nuts, yerba maté (Paraguay tea), medicinal plants, and vegetable oils. There are vast fishing banks and grounds in the rivers and along the coast, with some 2,500 species of fish.

Climate. Brazil is almost wholly in the torrid zone, but such factors as altitude, prevailing winds, rainfall and distance from the sea combine to vary the climate from tropical to temperate. Manaus on the Amazon has an average temperature of 80.9° and annual rainfall of 71.65 inches. The corresponding figures for Rio de Janeiro are 72.5° and 44 inches. February is usually the warmest month in Rio de Janeiro. In much of the Amazon basin, rainfall averages 80 inches.

BRITISH COMMONWEALTH OF NATIONS

This is a world-wide community of ten independent nations, officially termed The Commonwealth of Nations (the United Kingdom, Australia, Canada, Ceylon, Ghana, India, the Federation of Malaya, New Zealand, Pakistan and the Union of South Africa) and their dependencies or semidependent territories bound together by allegiance to the British Crown or by recognition of the British sovereign as head of the Commonwealth and symbol of free and equal association of countries within its framework.

EUROPE

United Kingdom of Great Britain and Northern Ireland

Area: 93,599 square miles (excluding Channel Islands and Isle of Man).

Population (est. June 1956): 51,209,000 (English, Scotch, Welsh, Irish).

Density per square mile: 547.1.

Ruler: Queen Elizabeth II.

Prime Minister: Harold Macmillan.

Principal cities (census 1951): London (Greater), 8,346,137 (capital); Birmingham, 1,112,340 (iron and steel); Glasgow, 1,089,555 (seaport, shipbuilding); Liverpool, 789,532 (seaport); Manchester, 703,175 (textiles); Sheffield, 512,834 (steel, cutlery); Leeds, 504,954 (clothing); Edinburgh, 466,770 (capital, Scotland).

Monetary unit: Pound sterling (£).

Languages: English, Welsh, Gaelic.

Religion: Church of England (established church); Church of Wales (disestablished); Church of Scotland (established church—Presbyterian); Church of Ireland (disestablished); Roman Catholic; Methodist; Congregational; Baptist; Jewish.

HISTORY. Roman invasions of the 1st century B.C. brought Britain into contact with the continent. When the Roman legions withdrew in the 4th century A.D., Britain fell easy prey to the invading hordes of Angles, Saxons and Jutes from Scandinavia and the Low Countries. Seven large kingdoms were established, and the original Britons were forced into Wales and Scotland. It was not until the 11th century that the country finally became united under the Danish King Canute. Following the death of Edward the Confessor (1066), a dispute about the succession arose, and William Duke of Normandy invaded England, defeating the Saxon noble, Harold II, at the Battle of Hastings (1066). The Norman conquest was accompanied by the introduction of Norman law and feudalism, changing the customs of England.

The reign of Henry II (1154-89), first of the Plantagenets, saw an increasing centralization of royal power at the expense of the nobles, but in 1215 John (1199-1216) was forced to sign the Magna Carta, which awarded the people, especially the nobles, certain basic rights. Edward I (1272-1307) continued the conquest of Ireland, reduced Wales to subjection, and made some gains in Scotland. In 1314, however, English forces led by Edward II were ousted from Scotland after the battle of Bannockburn. The late 13th and early 14th centuries saw the development of a separate House of Commons with tax-raising powers.

Edward III's claim to the throne of France led to the Hundred Years' War

(Note: Each population figure is followed by superior number denoting the year of estimate or census: ¹ for 1957, ^a for 1956, ³ for 1955, etc.)

(1338–1453), which ended with the loss of almost all the large English territory in France. In England the great poverty and discontent caused by the war was intensified by the Black Death, a plague which reduced the population by about one-third. The Wars of the Roses (1455–85), a struggle for the throne between the House of York and the House of Lancaster, were ended by the victory of Henry Tudor (Henry VII) at Bosworth Field (1485).

During the reign of Henry VIII (1509–47), the Church in England asserted its

independence from the Roman Catholic Church. Under Edward VI and Mary, the two extremes of religious fanaticism were reached and it remained for Henry's daughter, Elizabeth I (1558–1603), to set up the Church of England on a moderate basis. In 1588 the Spanish Armada, a fleet sent out by Catholic King Philip II of Spain, was defeated by the English and destroyed during a storm. It was during Elizabeth's reign that England became a world power.

Elizabeth's heir was of the house of

Stuart—James VI of Scotland—who joined the two crowns as James I (1603-25). The Stuart Kings incurred large debts and were forced either to depend on Parliament for taxes or to raise money by illegal means. In 1642 war broke out between Charles I and a large portion of the Parliament; Charles was defeated and executed in 1649, and the monarchy was then abolished. The Puritan Commonwealth endured for ten years, but after the death (1658) of Oliver Cromwell, the Lord Protector, the government fell to pieces and Charles II was restored to the throne in 1660. The struggle between the King and Parliament continued, but Charles II knew when to compromise. His brother James II (1685-88) possessed none of his ability and was ousted by the Revolution of 1688, which confirmed the predominant position of Parliament. James' daughter, Mary, and her husband, William of Orange, now ruled jointly.

The reign of Queen Anne (1702-14) was marked by the Duke of Marlborough's victories over France at Blenheim, Oudenarde and Malplaquet in the War of the Spanish Succession. England and Scotland meanwhile were joined together by the Act of Union (1707). Upon the death of Anne, the distant claims of the elector of Hanover were recognized, and he became King of England as George I.

The 18th century was a period of gradual growth and change. At home the unwillingness of the Hanoverian Kings to rule resulted in the formation by the King's ministers of a Cabinet, headed by a Prime Minister, which directed all public business. Abroad the constant wars with France resulted in expansion of the British Empire all over the globe, particularly in North America and India. This imperial growth was checked by the revolt of the American colonies (1775-81).

The age-long struggle with France broke out again in 1793, and during the lengthy Napoleonic Wars, which ended at Waterloo (1815), England was pitted at one time against almost all of Europe.

The Victorian era, named after Queen Victoria (1837-1901), saw the growth of a democratic system of government which had begun with the Reform Bill of 1832. The two important wars in Victoria's reign were the Crimean War against Russia (1853-56) and the Boer War (1899-1902). The latter was accompanied by enormous extension of England's sway in Africa.

The reign of Edward VII (1901-10) was marked by increasing uneasiness at home and abroad. Within four years after the accession of George V (1910), England entered World War I when Germany invaded Belgium. The nation was led by coalition Cabinets headed first by Herbert Asquith and then (Dec. 1916) by the Welsh states-

AREA AND POPULATION OF MAJOR SUBDIVISIONS*

Subdivision	Area sq. mi.	Population, est. June 1956
England	50,871	44,667,000
Wales	7,474	
Scotland	29,795	5,145,000
Northern Ireland	5,459	1,397,000

* Not including Channel Islands and Isle of Man.

man, David Lloyd George. The years after the war were marked by labor unrest which culminated in the general strike of 1926. A Labour ministry formed early in 1924 by Ramsay MacDonald fell in October of that year. In 1929 a second Labour government was formed, but the world economic depression forced a change in 1931, and a national government was formed composed chiefly of Conservative members, although MacDonald remained Prime Minister until 1935. King Edward VIII succeeded to the throne in 1936 on his father's death but abdicated eleven months later (in order to marry an American, Wallis Warfield Simpson, whose second divorce was then pending) in favor of his brother, who became King George VI.

The efforts of Prime Minister Neville Chamberlain to meet by peaceful means the rising threat of Nazism in Germany failed with the German invasion of Poland (Sept. 1, 1939), which was followed by England's entry into World War II (Sept. 3, 1939). Serious Allied reverses in the spring of 1940 led to Chamberlain's resignation and the formation of another coalition war Cabinet by Conservative leader Winston Churchill, who led England through most of World War II. Churchill resigned as the coalition leader shortly after V-E Day, but then formed a "caretaker" government which remained in office until after the parliamentary elections of July 5, 1945, in which the Labour party won an overwhelming victory. The government formed by Clement R. Attlee on July 26 began a moderate socialistic program.

Internationally, the Attlee government continued Britain's close co-operation with the United States through the North Atlantic Treaty and in the Korean war, at the same time solidifying its position in Western Europe in opposition to the U.S.S.R. The Labour regime, returned to office by a slight majority in the parliamentary elections of Feb. 1950, lost by a narrow margin in the Oct. 1951 elections. On Oct. 26 Winston Churchill again became Prime Minister at the head of a Conservative government. George VI died Feb. 6, 1952, and was succeeded by his daughter, Elizabeth II.

Churchill voluntarily stepped down on April 5, 1955, in favor of Sir Anthony Eden, who led the Conservatives to an-

other victory in elections May 26, 1955. The Suez crisis and the abortive Anglo-French invasion of Egypt (Oct. 31, 1956) were followed by Eden's resignation on grounds of ill health (Jan. 9, 1957). Harold Macmillan succeeded him.

RULER. Queen Elizabeth II, born April 21, 1926, elder daughter of King George VI and Queen Elizabeth, succeeded to the throne on the death of her father, Feb. 6, 1952; married Nov. 20, 1947, to Prince Philip, Duke of Edinburgh, born June 10, 1921; their children are Prince Charles (heir presumptive), born Nov. 14, 1948, and Princess Anne, born Aug. 15, 1950. The Queen's sister is Princess Margaret Rose, born Aug. 21, 1930; her uncles are Prince Edward Albert, Duke of Windsor (formerly King Edward VIII), born June 23, 1894, and Prince Henry William, Duke of Gloucester, born March 31, 1900.

GOVERNMENT & DEFENSE. The United Kingdom is a constitutional monarchy, with a Queen and a Parliament which has two houses: the House of Lords with about 830 hereditary peers, 26 spiritual peers, 16 Scottish representative peers, a number of Irish representative peers (vacancies are no longer filled), and a few life peers who hold or have held high judicial office; and the House of Commons, numbering since 1955 630 members elected by practically universal suffrage. Supreme legislative power is vested in Parliament, which holds office for five years unless sooner dissolved. The executive power of the Crown is exercised by the Cabinet, headed by the Prime Minister. The latter, normally the head of the party commanding a majority in the House of Commons, is appointed by the sovereign, with whose consent he in turn appoints the rest of the Cabinet. All ministers must be members of one or the other house of Parliament; they are individually and collectively responsible to the Crown, the Prime Minister and Parliament. The Cabinet proposes bills and arranges the business of Parliament but it depends entirely on the votes of confidence in Commons. The lords cannot hold up "money" bills, but they can delay other bills for a period of at least one year.

By the Act of Union (1707) the Scottish Parliament was assimilated with that of England, and Scotland is now represented in Commons by 71 members. The Secretary of State for Scotland, a member of the Cabinet, is responsible for the administration of Scottish affairs.

Parliamentary elections held on May 26, 1955, returned 345 Conservatives and associates, 277 Labour party, 6 Liberals and 2 Irish nationalists. Polling at contested elections was: Conservatives and associates, 13,336,182; Labour, 12,405,130; others, 295,772 (including Communist, 33,144).

The members of the Cabinet (June 1957): Harold Macmillan (Prime Minister, First Lord of the Treasury), Richard A. Butler (Secretary of State for Home Affairs, Lord Privy Seal), Viscount Kilmauir (Lord Chancellor), Peter Thorneycroft (Chancellor of the Exchequer), Selwyn Lloyd (Secretary of State for Foreign Affairs), Earl of Home (Lord President of the Council, Secretary of State for Commonwealth Relations), Alan Lennox-Boyd (Secretary of State for the Colonies), John S. MacLay (Secretary of State for Scotland), Duncan Sandys (Minister of Defense), Derek Heathcoat-Amory (Minister of Agriculture, Fisheries and Food), Iain Macleod (Minister of Labor and National Service), Henry Brooke (Minister of Housing and Local Government and for Welsh Affairs), Viscount Hailsham (Minister of Education), Sir Percy Mills (Minister of Power), Harold Watkinson (Minister of Transport and Civil Aviation), Dr. Charles Hill (Chancellor of the Duchy of Lancaster).

Local Government. Both England and Wales are divided into 62 administrative counties, including the county of London, and 83 county boroughs. The counties are administered by the justices and by popularly elected county councils. All incorporated towns are administered by a municipal corporation consisting of the mayor, aldermen and burgesses. Local government in Scotland is comparable to that in England and Wales.

Judiciary. The ultimate British court of appeal is the House of Lords; the final court of appeal for certain of the Dominions is the Judicial Committee of the Privy Council. Below the House of Lords on the civil side is the High Court of Judicature, divided into two parts, the Court of Appeal, and the High Court of Justice. On the criminal side is the Court of Criminal Appeal, which is the court of last resort barring the rare allowance of an appeal to the Lords. Actually these superior courts hear only a small fraction of the cases, and most of the trials are held in a complicated system of inferior courts, exercising original jurisdiction. The Lord Chancellor, Lord Chief Justice, Lords of Appeal in Ordinary (law members of the House of Lords), and Lord Justices of Appeal are appointed by the Prime Minister.

Defense. Compulsory military service, introduced in May 1939, is still in effect, and will continue until 1959 under the terms of National Service acts since passed. An act passed in 1950 makes 2 years' national service compulsory for men between 18 and 26. The armed forces are comprised of three separate services—the Army, the Royal Navy and the Royal Air Force. The Prime Minister retains responsibility for defense, but the Minister of Defense has coordinating and executive duties.

Service ministers are no longer Cabinet members but continue to be members of the Defense Committee headed by the Prime Minister.

Military-budget estimates for the fiscal years 1956-57 and 1957-58 follow:

	1956-57	1957-58
Navy	\$351,500,000	\$316,150,000
Army	\$519,000,000	\$445,500,000
Air	\$527,000,000	\$506,150,000

The estimated strength of the armed forces on April 1, 1957, was 718,800, including 451,900 regulars, 251,700 national servicemen and 15,200 women; the projected strength for April 1, 1958, was 654,300.

Control of the land forces is exercised by the Army Council, headed by the Secretary of State for War. Its members include the Chief of the Imperial General Staff, the Adjutant General and Quartermaster General.

The Royal Navy is controlled by the Board of Admiralty, headed by the First Lord of the Admiralty, who is responsible to Parliament. Other members include the First Sea Lord and Chief of Naval Staff. In Dec. 1956, the Royal Navy had in active service and in reserve 5 fleet carriers, 9 light aircraft carriers, 5 battleships, 22 cruisers, 68 destroyers, 54 submarines, 168 frigates and escort vessels and many other smaller craft. Several aircraft carriers, cruisers and smaller craft were under construction.

Control of the Royal Air Force is vested in an Air Council analogous to the Army Council and headed by the Secretary of State for Air. The Fleet Air Arm was transferred to the Royal Navy in 1937.

A total of 5,896,000 men served in the armed forces during World War II; there were also 640,000 in the Women's Auxiliary Forces. Units of the navy, army and air force served in Korea.

Research and development in the field of atomic energy and weapons is the responsibility of the Atomic Energy Authority.

SOCIAL AND ECONOMIC CONDITIONS.

Education. The school system in England and Wales has undergone considerable change since enactment of the Education Act of 1944. This measure makes primary and secondary training available for all children at public expense, with the secondary stage starting at the age of 11. The school-leaving age was raised from 14 to 15 on April 1, 1947. Statistics are:

England and Wales (Jan. 1955): 24,272 primary schools, pupils 4,796,763; 5,562 secondary schools, pupils 2,077,816; special schools 743, pupils 58,034. Scotland (1954-55): 2,871 primary schools, pupils 598,011; 809 secondary schools, pupils 234,875.

In 1955-56 the 14 English universities had 66,813 students; the 3 university colleges 2,191 students; the University of Wales 4,459 students and the 4 Scottish universities 15,118 students.

Agriculture. Agriculture remains one of Britain's chief industries, employing about 800,000 persons.

LEADING AGRICULTURAL PRODUCTS (in thousands)

	1955		1956*	
	Acres	Long tons	Acres	Long tons
Wheat	1,948	2,599	2,293	2,845
Barley	2,296	2,936	2,323	2,800
Oats	2,581	2,709	2,564	2,486
Sugar beets	424	4,556	426	5,169
Potatoes	874	6,278	921	7,533

* Provisional.

Livestock (June 30, 1956) included 10,907,000 cattle, 23,594,000 sheep, 5,474,000 hogs and 92,464,000 poultry. Cattle occupy a predominant position in British agriculture, accounting for about 40 per cent of the total farm output. Production of cheese (1955-56, including farmhouse) was 75,000 long tons; butter (including farmhouse), 27,000 tons; beef and veal, 687,000 tons; mutton and lamb, 191,000 tons; bacon and ham, 311,000 tons; wool (fleece), 31,000 tons.

Industry. The most important British manufacture is heavy goods such as machinery, tools, bridges and locomotives; industry is concentrated in the north and Midlands of England. Sheffield is the center of the steel industry, while the china industry is concentrated in the Midlands. The cotton industry is centered in Lancashire; Liverpool, Manchester, Oldham, Preston and Bolton are the main manufacturing towns. The wool industry, England's oldest large trade, is located just east of the cotton towns, at Leeds, Bradford and Hull in Yorkshire. An important industrial region is the central Lowlands of Scotland, where woollens and other fabrics, lace, glass, paper, steel and pig iron are produced. Important shipyards are located along the coast. Vessels aggregating 1,457,000 gross tons were completed in 1956; they represented about 26% of the world total. On Dec. 31, 1956, 328 vessels of 2,135,218 gross tons were under construction in the United Kingdom. Steel production in 1956 was 20,659,600 long tons; that of pig iron, 13,156,000 tons. The iron and steel industry passed into public ownership in 1951 but was denationalized in 1953. In 1956, 707,600 cars and 297,000 trucks and other commercial vehicles were produced.

In April, 1948, there were 51,050 industrial establishments having more than 10 employees; the total working population on Dec. 31, 1956, was 24,087,000.

Trade. The United Kingdom's economic prosperity is dependent on its foreign trade, and the nation made great efforts after World War II to build up its volume of exports.

Sweden	116.9	139.6	145.0
India	148.4	159.0	141.5

Communications. The merchant marine on June 30, 1956, totaled 5,508 ships (100 tons and over) with a gross tonnage of 19,545,875—about 18.5% of the world total and second only to the U. S. merchant fleet.

Nationalization of the railway and canal systems in Great Britain became effective Jan. 1, 1948, and they are now operated by the government's Transport Commis-

sion. Railway mileage in the United Kingdom (1955) was 20,586; in 1956, 1,005,300,000 passengers and 275,800,000 long tons of freight were carried in Great Britain. The total length of public highways is 183,477 miles, of which 157,089 are in England and Wales and 26,388 in Scotland. In Nov. 1956 licensed motor vehicles totaled 6,711,000, including 3,801,000 cars and 1,091,000 commercial trucks. Radio receiving licenses in April 1957 numbered 7,509,000; television and radio sets, 7,050,000.

British air services throughout the world are nationalized under the Minister of Civil Aviation. Service is supplied by two public corporations—British Overseas Airways (BOAC) and British European Airways.

Finance. Recent data are as follows (in millions of pounds sterling):

	1955-56	1956-57	1957-58*
Revenue	4,893.1	5,157.8	5,288.8
Expenditure	4,496.0	4,868.0	4,826.9

* Budget estimate.

The net deadweight debt on Mar. 31, 1956, was £27,040,000,000; 1955, £26,933,000,000; 1950, £25,986,000,000; Sept. 1939, £8,400,000,000.

ESTIMATED REVENUE AND EXPENDITURE 1957-58

	Estimated Revenue
Income tax	£2,176,250,000
Surtax	149,000,000
Death duties	170,000,000
Stamps	60,000,000
Profits tax, excess profits tax and excess profits levy	255,000,000
Other inland revenue duties	500,000
Total inland revenue	£2,810,750,000
Customs	1,204,500,000
Excise	912,850,000

NATURAL FEATURES AND RESOURCES;
CLIMATE.The United Kingdom, consisting of England, Wales, Scotland and Northern Ireland, is a third the size of Texas. England, in the southeast part of the British Isles, is separated from Scotland on the north by the granite Cheviot Hills; from

them the Pennine chain of uplands extends south through the center of England, reaching its highest point in the Lake district in the northwest. To the west along the border of Wales—a land of steep hills and valleys—are the Cambrian Mountains while the Cotswolds, a range of hills in Gloucestershire, extend into the surrounding shires. The remainder of England is plain land, though not necessarily flat, with the rocky sand-topped moors in the southwest, the rolling downs in the south and southeast and the reclaimed marshes of the low-lying Fens in the east central districts. Scotland is divided into three physical regions—the Highlands, the Central Lowlands, containing two-thirds of the population, and the Southern Uplands. The western Highland coast is intersected throughout by long narrow sea-lochs or fiords. Scotland also includes the Outer and Inner Hebrides and other islands off the west coast, and the Orkney and Shetland Islands off the north coast.

Wales is generally hilly; the Snowdon range in the northern part culminates in Mt. Snowdon (3,557 ft.), highest in either England or Wales.

In addition to the numerous inlets and bays of the coast, England has a group of lakes in the northwest which includes Windermere, Coniston, Derwentwater, Ullswater and Grasmere. Important rivers flowing into the North Sea are the Thames, Humber, Tees and Tyne. In the west are the Severn and the Wye, which empty into the Bristol Channel and are navigable, as are the Mersey and Ribble. Scotland has many picturesque lakes; its most important river is the Clyde.

Minerals. Great Britain's most important mineral resource is coal, which was responsible to a large extent for British industrial supremacy during the late 18th and the 19th centuries. The coal mines were nationalized in 1946. Reserves have been variously estimated at from 150,000 million to 200,000 million tons. Prior to World War II, coal was exported in declining amounts to the continent, mainly to France, Sweden, Denmark and Italy. Since the war, however, exports have been negligible, and Britain has been hard put to meet her own minimum domestic requirements.

Most of the British iron ore is produced in England, especially in Cumberland, Lancashire and Staffordshire. Tin ore and copper are obtained almost exclusively from Cornwall, while lead comes mainly from Flint, Durham and Derbyshire. Zinc occurs mainly in North Wales, the north of England, the Isle of Man and the county of Dumfries in Scotland. The whole British supply of china clay (kaolin)—of great importance in the ceramic, papermaking, bleaching and chemical industries—comes from Cornwall. Petroleum production is

negligible, but oil shale exists in large quantities.

MINERAL PRODUCTION, 1955 and 1956 (in thousands of long tons)

	1955	1956
Coal *	221,630	222,650
Iron ore	16,175†	16,245†
Aluminum	120	124
Superphosphates (P ₂ O ₅ content)	168	179
Zinc (smelter)	81	81

* Excluding No. Ireland. † 52 weeks

Water Power. The most important potential sources of water power are in the highlands of Scotland, North Wales and Cumberland. Electricity generated in England, Scotland and Wales averaged 7,263,000,000 kwh. monthly in 1956. Gas manufacture averaged 1,427,000,000 cu. m. monthly in that year. Nationalization of the electric and gas industries became effective in 1948.

Forests and Fisheries. Great Britain was once heavily forested, but centuries of timber cutting and clearing have denuded the country of the original forests. Woodland of all types approximates 3,000,000 acres, and barely 40 per cent of Britain's surface is covered with timber. Consequently the nation is heavily dependent on imported timber.

Great Britain's sea fishing industry is among the most important in the world. The principal kinds of fish caught are herring, cod, haddock, plaice and hake, classed as wet fish, and, among shellfish, oysters, crabs and lobsters. The most important factor in the export trade is salted herring, which ordinarily represents about 70 per cent of the total. The principal grounds frequented by British fishermen are the North Sea; off Iceland; the Faeroes; south of Ireland; west of Scotland; west of Ireland; the Irish Sea and English Channel. The catch of wet fish in 1956 was 932,817 long tons valued at £46,628,299; most important was cod (387,611 tons valued at £18,641,029).

Climate. Although Great Britain lies in the same approximate latitude as Labrador, its climate is tempered by the westerly winds blowing off the warm Gulf Stream. The sea winds also prevent excessive summer heat. Rainfall is abundant, especially in the early fall. London's famed "pea-soup" fogs occur most frequently in November and March. It has been estimated that clouds, fogs or mists obscure the sun for approximately two-thirds of the daylight hours.

The mean annual temperature of England and Wales is about 50°; the west coast is somewhat warmer than the east. January is the coldest month (average about 40°) and July the hottest (about 61.5°). Highest July temperatures usually occur around London, where the mean is somewhat above 64°. Coldest months in

the capital are December (about 38°) and January (about 39°). The mean annual rainfall in London is 23½ inches.

North of Birmingham, the summers are cool, and in Edinburgh the mean temperature in July is usually below 60°. Rainfall is less than in London.

NORTHERN IRELAND

(Part of United Kingdom)

Area: 5,459 square miles.

Population (est. June 1956): 1,397,000.

Density per square mile: 255.9.

Governor: Lord Wakehurst.

Prime Minister: Viscount Brookeborough.

Principal cities (census 1951): Belfast, 443,671 (capital); Londonderry, 50,092 (clothing).

Monetary unit: Pound sterling.

Language: English, Gaelic.

Religions (census 1951): Roman Catholic (34.4%), Presbyterian (29.9%), Church of Ireland (25.8%), Methodist (4.9%), others (5%).

Northern Ireland comprises the six predominantly Protestant counties of Antrim, Armagh, Down, Fermanagh, Londonderry and Tyrone (collectively known as Ulster), which form the northern part of the island of Ireland. The area is an integral part of the United Kingdom, but under the terms of the Government of Ireland Act (1920) it has a semi-autonomous government.

The government has only limited powers for local purposes, and many matters are reserved to the central government at Westminster. Executive authority is vested in the Crown-appointed Governor, who is advised by a Cabinet of eight ministers headed by the Prime Minister. The Parliament consists of the House of Commons of 52 members elected for 5-year terms, and the Senate of 26 members elected by the House of Commons. The general elections of Oct. 22, 1953, returned 38 Unionists, 9 Nationalists and 5 representatives of other groups to the House. The area is also represented by 12 members in the British Parliament at London.

In 1954-55 there were 1,606 primary schools (up to 11 years) in Northern Ireland, with enrollment of 203,055, and 81 secondary schools, with enrollment of 30,899. Students at Queen's University (Belfast) numbered 2,590.

Agriculture is the largest single industry; about two-thirds of the country is devoted to crops and pasture under a system of mixed farming. The leading crops include potatoes, oats and flax. In 1955 there were 905,890 cattle, 878,480 sheep and 696,410 hogs.

The two principal manufacturing industries are linen and shipbuilding, both centered in Belfast. The linen industry was established by Huguenot weavers who fled France after the revocation of the Edict of Nantes in 1685.

On Dec. 31, 1956, 19 ships of 243,687 tons were under construction at Belfast.

The topography of Northern Ireland is somewhat similar to that of the rest of the island, with two ranges (Donegal and Sperrin) and an extensive plateau (Antrim) in the northeastern part. Mineral resources are limited to deposits of basalt, clay, sandstone and granite. Fishing is an important industry, off the coast and in the numerous lakes and rivers which abound in salmon, eels and trout. Lough Neagh, covering about 153 square miles, is the largest lake in the British Isles.

The climate is comparable to that of the rest of the United Kingdom, although somewhat more equable. The highest mean summer temperature is about 59° in July, and the mean winter temperature rarely falls below 40°. Most of the comparatively light rainfall occurs in the autumn.

ISLE OF MAN

Lieutenant Governor: Sir Ambrose Dundas.

Located in the Irish Sea, equidistant from Scotland, Ireland and England, the Isle of Man is administered according to its own laws by a government composed of the Lieutenant Governor (appointed by the Crown), a Legislative Council of 11 members, and a House of Keys of 24 elected members, one of the most ancient legislative assemblies in the world. All sitting together constitute the court of Tynwald, which controls revenue and has executive power. Acts of the British Parliament do not affect the island unless it is named.

Agriculture and fishing are the principal industries. The island is a popular English summer resort.

CHANNEL ISLANDS

Lieutenant Governor of Jersey: Adm. Sir Randolph Nicholson.

Lieutenant Governor of Guernsey: Air Marshal Sir Thomas Elmhirst.

This group of islands, lying in the English Channel off the northwest coast of France, is the only portion of the Duchy of Normandy belonging to the English Crown, to which it has been attached since the conquest of 1066. It was the only British possession occupied by Germany during World War II.

For purposes of government the islands are divided into Jersey (45 sq. mi.) and the bailiwick of Guernsey (24 sq. mi.), including Alderney (3 sq. mi.), Sark (2 sq. mi.), Herm and Jethou. The islands are administered according to their own laws and customs by local governments headed by Crown-appointed Lieutenant Governors. Acts of Parliament in London are not binding on the islands unless they are specifically mentioned.

The two main sources of income for the population are agriculture, especially stock-raising, and the tourist trade. French is still the official language, although English is the main language of commerce.

GIBRALTAR—Status: Colony.

Governor: Lt. Gen. Sir Harold Redman.

Gibraltar, at the south end of the Iberian Peninsula, is a rocky promontory commanding the western entrance to the Mediterranean. Aside from its strategic importance, it is also a free port, naval base and coaling station. It was captured by the Arabs crossing from Africa into Spain in A.D. 711. In the 15th century it passed to the Moorish ruler of Granada and later became Spanish. It was captured by an Anglo-Dutch force in 1704 during the War of the Spanish Succession and passed to Britain by the Treaty of Utrecht in 1713. Most of the inhabitants are of Spanish, Italian and Maltese descent. There are no important industries. Gibraltar's climate is equable, with summer temperatures averaging about 84° maximum. Mean annual temperature is 64.4° and annual rainfall is about 35 inches.

MALTA—Status: Self-governing colony.

Capital: Valletta (population 18,801).

Governor: Maj. Gen. Sir Robert Laycock.

Prime Minister: Dominic Mintoff.

Foreign trade (1955): exports, £850,625 (52% to Britain); re-exports, £1,882,296 (largely fuel for ships and aircraft); imports, £21,187,115 (39% from Britain). Chief domestic export: potatoes (22%).

Agricultural products: potatoes, onions, cereals, fruits.

The Maltese islands lie between Europe and Africa, in the central channel linking the eastern and western Mediterranean. The inhabited islands are Malta (95 sq. mi.), Gozo (26 sq. mi.) and Comino (1 sq. mi.). The Knights of St. John (Malta), who obtained the islands from Charles V in 1530, reached their highest fame when they withstood an attack by superior Turkish forces in 1565. Napoleon seized Malta in 1798, but the French forces were ousted by British troops in 1799, and British rule was confirmed by the Treaty of Paris (1814). The principal importance of Malta is its strategic location as a naval base; it was heavily attacked by German and Italian aircraft during World War II but was never invaded by the Axis. Most of the population are Maltese, speaking the Phoenician Maltese language, a tongue akin to Syriac and Arabic. The islands are densely populated (2,554 per square mile in 1956).

Under its 1947 Constitution, Malta enjoys a measure of self-government. The locally-elected Assembly has complete control over domestic affairs, but the British government keeps control over matters dealing with defense and foreign affairs.

The climate is temperate and healthful. Annual mean temperature is 64.5°, with June–September the hottest months and December–February the coldest (56°). Rainfall is irregular, averaging about 20 inches annually.

AFRICA

BRITISH SOUTH AFRICAN TERRITORIES

High Commissioner: Sir Percivale Lieching.

The three British territories in southern Africa—Basutoland, Bechuanaland and Swaziland—are not part of the Union of South Africa, but are administered by a High Commissioner responsible to the Secretary of State for Commonwealth Relations in the British Cabinet. He also holds the office of High Commissioner for the United Kingdom in the Union of South Africa.

BASUTOLAND—Status: Colony.

Capital: Maseru (population 4,000).

Resident Commissioner: A. G. Chaplin.

Foreign trade (1954): exports, £1,954,105; imports, £2,612,007. Chief exports: wool, mohair.

Agricultural products: corn, wheat, sorghum.

Basutoland is a mountainous enclave surrounded by the Union of South Africa and bounded by the Orange Free State, Cape Province and Natal. It was constituted a native state under British protection by a treaty signed with the native chief Moshesh in 1843. It was annexed to Cape Colony in 1871, but on Mar. 13, 1884, was restored to direct control by the Crown. The Resident Commissioner is advised by a council of 100, of whom 95 are nominated by the native chiefs who administer the affairs of their tribes.

The population is restricted almost entirely to the lowland strip in the west; the white population (1,676 by the last census, in 1946) consists solely of officials, missionaries, traders and a few labor agents for employers in the Union of South Africa. About 100,000 natives are regularly employed in the Union. Sheep raising is highly developed. Land is the common property of the nation and is held in trust by the chiefs.

The climate is dry and variable; temperatures range from 11° to 93°. Rainfall also is variable, but it is heaviest during the summer months; it averages about 30 inches annually.

BECHUANALAND—Status: Protectorate. Administrative center: Mafeking, in Cape Province (population 4,666).

Resident Commissioner: M. O. Wray.

Foreign trade (1955): exports, £2,821,647;

imports, £2,462,495. Chief export: pastoral products.

Agricultural products: hides and skins, cattle, butter, millet, maize.

Minerals: gold and silver.

Bechuanaland lies in south central Africa, bounded on the south and southeast by the Union of South Africa, on the west by South-West Africa, on the north by Angola and Northern Rhodesia and on the northeast by Southern Rhodesia. Its average elevation is 3,300 feet and the greater part is gently undulating. The area was placed under British protection on Sept. 30, 1885, to prevent further Boer encroachment and has since remained a British protectorate. The form of government is similar to that of Basutoland.

Most of the inhabitants are Bantu, but there were 2,325 Europeans in 1946, a few of them farmers. The country is essentially pastoral, with cattle raising and dairy farming the chief industries. Gold is mined in the Tati district near Francistown. There is also some mining of silver and copper. Timber is produced for use as fuel and pit props.

The summers are intensely hot; winters (May–August) are pleasant. Rainfall occurs mostly between December and May, and averages about 18 inches annually.

SWAZILAND—Status: Protectorate.

Capital: Mbabane (population 1,600).

Resident Commissioner: B. A. Marwick.

Foreign trade (1954): exports, £3,134,462; imports, £2,386,332. Chief exports: cattle, asbestos.

Agricultural products: cattle, hides and skins, butter, tobacco, corn, millet.

Minerals: asbestos, tin, gold.

Swaziland lies at the southeastern corner of the Transvaal. It is largely hilly, with an average elevation of 4,000 feet in the west. It came under the protection of the Transvaal Republic in 1894 but was made a British protectorate in 1906 under the High Commissioner for South Africa.

The natives are mostly Swazi; there were 3,204 Europeans in 1946, mostly farmers. Grazing is the principal native occupation; there is excellent pasture in the high land to the west. Tropical and subtropical crops are raised in the lower areas. Tin is mined near Mbabane.

Rainfall is moderate throughout the protectorate (about 20 inches a year) and is heaviest in summer. Average temperature ranges from about 65° in July to 80° or more in January.

EAST AFRICA HIGH COMMISSION

The East Africa High Commission, comprising the Governors of Kenya, Tanganyika and Uganda, administers the public utilities and other central services of those territories, and has power to legislate with

respect thereto with the advice and consent of a Central Legislative Assembly. The governments of the three areas are otherwise independent of one another.

KENYA—Status: Colony and protectorate.

Capital: Nairobi (pop. 1948: 118,976).

Governor: Sir Evelyn Baring.

Foreign trade (1956)*: domestic exports, £28,983,451 (25% to Britain); re-exports, £4,051,042; imports, £69,823,272 (51% from Britain). Chief exports: coffee (47%), tea (9%), sisal (7%).

Agricultural products (exports 1956): coffee (26,670 long tons), tea (6,956 tons), sisal (35,206 tons).

Minerals: gold (exports 1956: 13,636 oz.), sodium carbonate, silver, salt.

Forest products: wattle bark extract (exports 1956: 21,817 long tons), timber.

* Import and re-export figures exclude outward transfers of imported goods to Tanganyika and Uganda.

Kenya extends along the Indian Ocean between Ethiopia and Tanganyika Territory and westward to Lake Victoria and Uganda. Formerly known as the East Africa Protectorate, it was held under a concession from the Sultan of Zanzibar by the Imperial British East Africa Company from 1888 to 1905. It became a Crown colony in 1920, the coastal strip leased from the Sultan becoming a protectorate.

The colony is predominantly agricultural, and a large area is cultivated by Europeans. Altitude ranges from sea level to more than 9,000 ft.; hence, the cultivation of tropical, subtropical and temperate crops is possible. Non-natives (1956) included 57,700 Europeans, 151,900 Indians and Goans and 33,000 Arabs.

Kenya has been plagued since 1952 by serious outbreaks of native terrorism inspired by the anti-white Mau Mau secret society, which have taxed strengthened security forces, including British regular army units.

The coastal zone of Kenya is hot and humid; February to April are the hottest months, with a mean temperature of 82° at Mombasa. June and July are coolest (76° at Mombasa). The yearly average rainfall is about 48 inches. In the interior highlands the climate is temperate, and the rainfall comparatively heavy. Yearly average temperatures at Nairobi are 60° to 66°.

TANGANYIKA TERRITORY—Status: U. N. trust territory.

Capital: Dar es Salaam (pop. 1952: 99,140).

Governor: Sir Edward F. Twining.

Foreign trade (1956)*: domestic exports, £44,804,789 (31% to Britain); re-exports, £1,422,860; imports, £35,885,139 (41% from Britain). Chief exports: sisal (24%), coffee (21%), cotton (17%), diamonds.

Agricultural products (exports 1956): sisal (185,588 long tons), coffee (21,630

tons), cotton (27,440 tons), peanuts, sugar cane, tea.

Minerals (exports 1956): gold (59,293 troy oz.), diamonds (357,982 carats).

Forest products: gum arabic and copal, beeswax, timber.

* Import and re-export figures exclude outward transfers of imported goods to Kenya and Uganda.

Tanganyika Territory, with the Belgian Ruanda and Urundi, constituted German East Africa from 1884 until 1919. It was administered under League of Nations mandate by Britain until 1946, when it was placed under United Nations trusteeship, with Great Britain as the administering power.

Tanganyika's narrow coastal plain is bordered on the west by the precipitous eastern side of the Central African plateau. Mount Kilimanjaro (19,565 ft.) is the highest point on the African continent. The territory also includes adjacent islands in the Indian Ocean.

The territory is sparsely populated; two-thirds of it is uninhabited. In 1956 there were 27,700 Europeans, 76,400 Indians and Goans, 16,900 Arabs. It is the world's largest producer of sisal hemp. Most of the hemp, which is of the highest grade, is grown in the drier parts of the coast belt under European supervision. Stock raising is also important, but its progress is hampered by prevalence of the tsetse fly.

The climate generally is hot and humid on the coastal areas, with the temperature averaging 80° at Dar es Salaam. Rainfall in the capital averages 60 inches. Inland the rainfall and temperature are lower.

UGANDA—Status: Protectorate.

Capital: Entebbe (pop. 1948: 7,942).

Governor: Sir Frederick Crawford.

Foreign trade (1956)*: domestic exports, £40,417,520 (28% to India); re-exports, £1,090,203; imports, £28,105,774 (30% from Britain). Chief exports: cotton (48%), coffee (39%).

Agricultural products (exports 1956): cotton (67,214 long tons), coffee (61,646 tons), sugar cane, rubber, tea, sisal.

Minerals: gold, tin.

* Import and re-export figures exclude outward transfers of imported goods to Kenya and Tanganyika.

Uganda lies immediately south of Anglo-Egyptian Sudan and west of Kenya, along the northwest shore of Lake Victoria. The surface is extremely diversified, with lofty plateaus, snow-capped peaks, swamps, forests and arid areas. A British protectorate over the area was proclaimed in 1894. A large measure of home rule is given the native states, notably Buganda, whose *kabaka* (king) is assisted by a ministry and native parliament.

Agriculture, including livestock, is the basis of the economy. Cotton is raised, principally by natives, and coffee, tea and rubber are grown on large plantations.

Most natives possess large herds of cattle and sheep. In 1956 there were 8,400 Europeans, 54,300 Indians and Goans and 2,000 Arabs.

Like the topography, the climate is extremely variable. At Entebbe, the mean temperature is about 70°.

GAMBIA—Status: Colony and protectorate.

Capital: Bathurst (population 19,602).

Governor: Sir Percy Wyn Harris.

Foreign trade (1956): exports, £2,552,-834; imports, £3,729,501. Chief export: peanuts (90%).

Agricultural products: peanuts (exports 1956: 38,107 long tons), hides and skins, millet, rice, palm kernels.

Gambia, smallest of the British West African dependencies, is a stretch of land 200 miles long on both sides of the lower Gambia River, surrounded on all land sides by French West Africa and fronting on the Atlantic Ocean. During the 17th century it was settled by various companies of English merchants; slavery was the chief source of revenue until it was abolished in 1807. Gambia became a Crown colony in 1843. Except for the island of St. Mary, on which the capital stands, the area is administered as a protectorate.

The inhabitants, mostly Negroes or Negroids, are predominantly Mohammedan. The principal economic activity is the cultivation of peanuts. Internal transportation is by steamer and launch. Temperatures are fairly regular throughout the year, ranging from about 60° to 85°. Maximum rainfall is in August and September.

Ghana

(Member of Commonwealth of Nations)

Area: 91,843 square miles.

Population (est. 1956): 4,691,000 (almost entirely African).

Density per square mile: 51.1.

Ruler: Queen Elizabeth II.

Governor General: Earl of Listowel.

Prime Minister: Kwame Nkrumah.

Principal cities (census 1948): Accra, 135,926 (capital); Kumasi, 59,420 (rail center); Sekondi-Takoradi, 44,557 (rail terminus and port).

Monetary unit: Gold Coast pound.

Languages: Native tongues (Twi, Fanti, Ga), English.

Religions: Pagan, Mohammedan, Christian.

Ghana, the newest independent member of the British Commonwealth, was known until 1957 as the Gold Coast. It was discovered by the Portuguese in 1471 and later became a center of the slave trade and of European rivalry. The original British Gold Coast colony (coastal and southern areas) was constituted in 1874; Ashanti was proclaimed a colony in 1901 and the Northern Territories a protectorate in 1902.

Togoland, formerly German, was divided into French and British spheres and placed under League of Nations mandate after World War I, and under U. N. trusteeship in 1946. As a result of a plebiscite held under U. N. auspices in 1956, British Togoland became, with U. N. approval, an integral part of Ghana.

In the years after World War II, Ghana won an increasing degree of self-government and finally gained independence within the Commonwealth on March 6, 1957. It became the 81st member of the U. N. two days later.

Under the 1957 Constitution, Ghana's government is headed by the Crown-appointed Governor General, who is advised by a Council of Ministers headed by the Prime Minister. Legislative power is vested in the popularly elected National Assembly consisting of a speaker and 104 members. The maximum life of the assembly is five years. The Constitution vests considerable power in the chiefs and the five regions into which Ghana is divided.

Except for about 12,000 non-Africans (1955), the population is all Negro. Paganism is predominant; there are Mohammedan and Christian minorities. The population is highly tribalized and over 50 different languages are spoken.

The mainstay of the economy is the cultivation of cacao, in the production of which Ghana leads the rest of the world (exports 1956: 234,406 long tons). Secondary export crops include palm kernels, copra, kola nuts, coffee and rubber. Livestock raising is important in the Northern Territories and along the coast east of Accra. Industrial development is in its infancy.

Recent foreign trade data (in millions of pounds):

	1953	1954	1955	1956
Exports	89.9	114.7	96.2	86.6
Imports	73.8	71.2	87.9	88.8

Chief exports in 1956 were cacao (59%), wood and lumber (11%), diamonds (9%), gold (9%) and manganese ore (8%). Chief customers in 1955 were Britain (41%), the U. S. (18%) and the Netherlands (11%); leading suppliers, Britain (47%), Japan (10%) and the Netherlands (8%).

Railways total about 600 mi.; in 1956, 4,200 mi. of trunk roads were open. The only deepwater port is at Takoradi; at all others loading and discharge is by surf boat.

Mineral resources are abundant. Most important is gold, mined at Tarkwa, Bibiani and Obuasi (exports 1956: 599,316 oz.). Others include diamonds (2,518,563 carats), manganese ore (635,851 long tons) and bauxite. Forest resources are extensive and large amounts of hardwoods, notably mahogany, are exported from the forest

zone of the interior; exports in 1956 totaled 26,951,818 cu. ft.

The coastal belt of the new nation, extending about 270 mi. along the Gulf of Guinea, is sandy, marshy and generally exposed. Behind it is a gradually widening grass strip. The forested plateau region to the north is broken by ridges and hills. The climate on the coast is hot and humid, ranging on the average from 78° to 80°. Rainfall is about 27 inches annually at Accra.

KENYA (See EAST AFRICA HIGH COMMISSION)

MAURITIUS—Status: Colony.

Capital: Port Louis (pop. 1954: 74,950).

Governor: Sir Robert Scott.

Foreign trade (1956): exports (including re-exports), 280,739,754 rupees* (82% to Britain); imports, 224,149,482 rupees (34% from Britain). Chief export: sugar (96%).

Agricultural products: sugar (1956: 572,000 metric tons), tea, tobacco, copra.

* Includes value of sugar preference certificates.

Mauritius is a mountainous island of volcanic origin in the Indian Ocean, about 500 miles east of Madagascar. It was seized in 1810 from the French, who had settled it in 1715, and was formally ceded to Great Britain by the Treaty of Paris in 1814.

With over 700 persons per square mile, the island is one of the most densely populated regions in the world. The population has a large white element, chiefly French and British, but British Indians are predominant. There are many half-castes. The leading industry is sugar cultivation.

The climate is pleasant during the cool season, but extremely hot from December to April (90° to 96° at Port Louis). During this period there are also frequent torrents of rain and occasional severe cyclones.

NIGERIA, FEDERATION OF—Status: Colony and protectorate.

Governor general: Sir James Robertson.

Principal cities (census 1952-53): Ibadan, 459,196 (native metropolis); Lagos, 267,407 (capital); Ogbomosho, 139,535 (native city); Kano, 130,173 (textiles, leather goods, cattle).

Monetary unit: Nigerian pound.

Languages: Native tongues, Arabic, English.

Religions: Mohammedan, Pagan, Christian.

Nigeria, with an area twice that of California, is situated on the Gulf of Guinea in West Africa. It was visited by European traders and explorers in the 16th and 17th centuries, and by the end of the 18th century British operators had a virtual monopoly in the area. Between 1879 and 1914, a series of private colonial developments by the British, together with reorganizations of the Crown's interest in the region, resulted in the formation of Nigeria as it exists today. During World

War I, native troops of the West African frontier force joined with French forces to defeat the German garrison in the Cameroons. The Cameroons, a narrow strip along Nigeria's eastern border, became a League mandate after World War I, divided between France and Britain. Today the British Cameroons, a U. N. trust territory, is attached to Nigeria for administrative purposes.

Under the Constitution of Oct. 1, 1954, Nigeria is a federation of 3 regions (Northern, Western and Eastern), and the quasi-federal territory of the Southern Cameroons. The administration is headed by the Governor General, assisted by a Council of 14 ministers, of whom 4 are ex officio and 10 are selected from the federal House of Representatives of 184 popularly elected members. Certain subjects are reserved to the federal government; each region has an elected Assembly and a Cabinet headed by a Premier. Administration of the Southern Cameroons is headed by a Federal Commissioner; there is a Legislative Assembly and an Executive Council. The Northern Cameroons is attached to the Northern Region.

The vast majority of the population is Negro, although in the north there has been an admixture caused by invasions of Fula, Berber and Arab or Arabized people. Mohammedanism is the dominant religion.

Most of the people are agriculturists. The staple food crops are durra (guinea corn), millet, yams, bananas and maize. Among the leading export crops are cacao (1956 exports: 117,113 long tons), peanuts (decorticated) (448,084 tons), palm kernels (451,069 tons), palm oil (147,551 tons) and rubber (32,731 tons). Hides and skins are also important export items. Aside from small native industry, there is no manufacturing.

Recent foreign trade figures are as follows (in millions of pounds):

	1954	1955	1956
Exports	150.0	132.0	134.6
Imports	114.0	135.8	152.6

Chief exports in 1956 were peanuts (21%), cacao (18%), palm kernels (15%) and palm oil (9%). Leading customers were Britain (63%), the Netherlands (10%) and the U. S. (9%); leading suppliers, Britain (45%), Japan (13%) and western Germany (8%).

There is a substantial internal trade; Kano is a busy terminal for caravan routes. The Niger and several other rivers are navigable; otherwise, the 1,901 miles of railway are the chief means of transportation. Highway mileage totals about 21,000. The main ports, except Lagos, are on rivers. Air service is supplied by BOAC, Air France and other international lines.

Nigeria is a leading tin producer—13,364 long tons in 1956—from mines on the Bau-chi plateau. Other minerals are coal, gold, lead, silver and tungsten. Over half the area is forested, but forest resources are comparatively unexploited. Mahogany is the main timber export.

All of Nigeria lies within the tropics, but the climate varies from tropical in the south to near temperate on some parts of the plateau. In the south the temperature varies between 70° and 100°, and averages upwards of 80°. Rainfall there is over 100 inches a year.

FEDERATION OF RHODESIA AND NYASALAND

Governor General: Earl of Dalhousie.

Prime Minister: Sir Roy Welensky.

Foreign trade (1956): exports, £181,747,-655 (58% to Britain, 10% to Union of South Africa); imports, £159,265,842 (41% from Britain, 34% from Union of South Africa). Chief exports (1955): copper (38%), tobacco (15%), asbestos (4%).

This is a federation of three British central African territories—Northern Rhodesia, Nyasaland and Southern Rhodesia. The federation embraces a block of territory (area 489,854 sq. mi.) extending southward for about 1,000 mi. from Tanganyika and the Belgian Congo to Bechuanaland and the Union of South Africa.

The federation came into existence on Oct. 23, 1953, when its Constitution took effect. The government is headed by the Crown-appointed Governor General, who is advised by a council of ministers headed by the Prime Minister. Legislative authority is vested in the Federal Assembly of 35 members, 17 from Southern Rhodesia, 11 from Northern Rhodesia and 7 from Nyasaland. Of these, 9 members (6 Africans and 3 Europeans) are specially elected or appointed to represent African interests. The federal government has exclusive control of several matters, including foreign affairs, defense, immigration, foreign trade, currency, transport and postal service.

The first general election for the Assembly took place on Dec. 15, 1953, and the first Assembly convened on Feb. 2, 1954.

NORTHERN RHODESIA—Status: Protectorate.

Capital: Lusaka (pop. 1954: 64,500).

Governor: Sir Arthur Benson.

Agricultural products: tobacco, maize, wheat.

Minerals: copper (1956: 429,000 short tons), cobalt, vanadium, lead, zinc.

Northern Rhodesia is in south central Africa. Much of the country consists of high plateau, with the Congo-Zambezi watershed rising in places to 5,000 feet. Rhodesia was assigned in 1889 to the British South Africa Company, headed by Cecil

Rhodes. Administrative control was transferred to the Crown on Apr. 1, 1924.

Native tribes number from 50 to 60; there were 64,800 Europeans in 1956. More than 3,000,000 acres are owned and occupied by Europeans. Metals constitute almost all exports by value. Lead and zinc deposits occur at Broken Hill; copper at Bwana M'Kuba. The main line of the Rhodesian railway crosses the northern part of the colony from Livingstone to the Congo border. A number of the rivers are navigable.

Average temperature in the south ranges from about 65° in July to 80° or more in October. The rainfall occurs principally between November and April; it varies widely in different parts of the protectorate.

NYASALAND—Status: Protectorate.

Capital: Zomba (pop. 1953: 5,000).

Governor: Sir Robert Armitage.

Agricultural products: tobacco (sales 1956: 34,337,000 lb.), tea, cotton.

Nyasaland, a British protectorate since 1891, is a narrow area lying between Mozambique, Northern Rhodesia and Tanganyika Territory along the southern and western shores of Lake Nyasa. Agriculture is the chief occupation, both of the European settlers and natives. Europeans numbered 6,700 in 1956.

The climate is extremely humid along the shores of Lake Nyasa, although the temperature rarely rises above 95°. In the highlands, above 3,000 feet, average temperatures are considerably lower. The dry season, from May to September, is comparatively cool. Annual rainfall is about 35 inches in the lowlands and 50 inches in the highlands.

SOUTHERN RHODESIA—Status: Self-governing colony.

Capital: Salisbury (pop. 1953: 90,000).

Governor: Vice-Adm. Sir Peveril William-Powlett.

Prime Minister: R. S. Garfield Todd.

Agricultural products: tobacco (sales 1956: 173,608,926 lb.), corn, peanuts, meat, hides and skins.

Minerals (1956): asbestos (118,000 short tons), gold (535,000 fine oz.), coal (3,917,000 tons), chrome ore (448,000 tons).

Southern Rhodesia is separated from Northern Rhodesia by the Zambezi River.

The country was settled in 1890 by the British South Africa Company, led by Cecil Rhodes. With the expiration of the company's charter, the white residents voted (1922) in favor of a responsible government of their own, and on Sept. 12, 1928, the country was annexed to Britain.

Southern Rhodesia has responsible government and a popularly elected Legislative Assembly of 30 members, but control of foreign relations and certain other matters is reserved to the federal government.

Most of the inhabitants are natives, but the country is well-adapted to European settlers, who in mid-1956 numbered 175,-800. In addition, there were 13,030 Asiatics and half-castes. Mining is the basis of the economy. Farming ranges from ranching to tobacco growing, but mixed farming is becoming more common. Conditions for cattle raising and dairy farming are especially favorable. Manufacturing is of growing importance, with the factories producing goods valued at £61,871,000 in 1953. The colony is well served with railways, roads and airlines, and has abundant electric power.

The hottest month is October (mean maximum 85.2°); the coolest are June, July and August, when frost is likely to occur. Generally the days are hot throughout the year, and the nights are frequently cool. Rainfall, averaging 28 inches annually, is greatest in October to December.

ST. HELENA—Status: Colony.

Capital: Jamestown (population 1,547).

Governor: Sir James Harford.

Foreign trade (1956): exports, £64,147 (71% to Britain); imports, £206,792 (44% from Britain). Chief export: hempen products (82%).

Agricultural products: flax, potatoes.

St. Helena is a volcanic island (47 sq. mi.) in the South Atlantic about 1,200 miles from the west coast of Africa. It is famous as the place of exile of Napoleon (1815-21). It was taken for Britain in 1651 by the British East India Company and became a Crown colony in 1833. Attached to it are Ascension Island (34 sq. mi.), 800 miles northwest, and the Tristan da Cunha group (45 sq. mi.), about 1,500 miles southwest. Most of the inhabitants are of mixed European, East Indian and African descent.

Although St. Helena is in the tropical zone, its climate is temperate and healthful; the temperature varies from 68° to 84° in summer and 57° to 90° in winter. Rainfall is extremely variable.

SEYCHELLES—Status: Colony.

Capital: Victoria (population 10,000).

Governor: Sir William Addis.

Foreign trade (1956): exports (domestic), 6,617,929 rupees (69% to India); imports, 7,484,576 rupees (38% from Britain). Chief export: copra (69%).

Agricultural products: cinnamon, patchouli oil, coconuts, maize, sugar cane.

This archipelago of about 92 islands in the Indian Ocean was seized from France by British troops in 1794 and was ceded to Great Britain by the Treaty of Paris in 1814. The principal island is Mahé (55 sq. mi.), about 600 miles northeast of Madagascar. The climate is temperate.

SIERRA LEONE—Status: Colony and protectorate.

Capital: Freetown (population: 64,576).

Governor: Sir Maurice Dorman.

Chief Minister: M. A. S. Margai.

Foreign trade (1956): exports, £13,184,-605 (63% to Britain); imports, £23,093,-100 (54% from Britain). Chief exports: diamonds (41%), iron ore (30%), palm kernels (11%).

Agricultural products: palm kernels (exports 1956: 57,645 long tons), palm oil, rice, millet, cassava, rubber.

Minerals (exports 1956): iron ore (1,328,-019 long tons), diamonds (647,797 carats), gold (452 troy oz.).

Forest products: palm kernels, piassava.

Sierra Leone lies on Africa's west coast between French Guinea and Liberia. It is a well-watered hilly country but has a low swampy coastland with an extremely unhealthy climate. The coastal area (colony proper) was ceded to English settlers in 1788 as a home for Negroes discharged from the British armed forces and also for runaway slaves who had found asylum in London. The British protectorate over the hinterland was proclaimed in 1896. It was not until 1928 that slavery was totally abolished in the protectorate. Under the 1951 Constitution as amended the House of Representatives has 57 members, of whom 51 are elected directly or indirectly.

Freetown is the best harbor on the west coast. Iron ore (60% metal content) from deposits at Marampa is shipped from Pepel, northeast of Freetown.

SOMALILAND—Status: Protectorate.

Administrative center: Hargeisa (population, about 20,000 in hot season and 40,-000 in cold season).

Governor: Sir Theodore Pike.

Foreign trade (1955): exports, £1,373,000; imports, £2,880,000. Chief export: hides and skins.

Agricultural products: cattle, hides and skins, grains.

Forest products: gums and resins.

British Somaliland extends along the Gulf of Aden for about 400 miles and inland for 80 to 220 miles. The interior is an elevated plateau falling in steep escarpments to the coastal plain. It came under Egyptian influence in 1875, but during the years 1884-86 treaties guaranteeing British protection were signed with the various Somali chiefs. Italian troops occupied the protectorate in 1940, but it was retaken by British troops in 1941. Both executive and legislative power is exercised by the Governor.

Most of the inhabitants are nomadic Somalis of Mohammedan faith. Their principal activity is stock raising. The climate is extremely hot and arid, with rainfall in the coastal areas averaging less than 8 inches. The average temperature at Berbera, on the coast, is 77° in January and about 98° in July.

SOUTH-WEST AFRICA (See **UNION OF SOUTH AFRICA**)

SWAZILAND (See **BRITISH SOUTH AFRICA PROTECTORATES**)

TANGANYIKA & UGANDA (See **EAST AFRICA HIGH COMMISSION**)

Union of South Africa

(Member of Commonwealth of Nations)

Area: 472,733 square miles.*
Population (est. June 30, 1957): 14,167,000* (European, 20.9%; Bantu, 66.9%; mixed, 9.2%; Asiatic, 3.0%).

Density per square mile: 30.0.*
Ruler: Queen Elizabeth II.
Governor General: Ernest G. Jansen.
Prime Minister: Johannes G. Strijdom.
Principal cities (est. 1956): Johannesburg, 1,006,500 (gold, industrial center); Capetown, 687,900 (seat of legislature, seaport); Durban, 591,300 (seaport); Pretoria, 327,200 (seat of administration); Port Elizabeth, 231,400 (seaport).

Monetary unit: South African pound (RSA).

Languages: English, Afrikaans.
Religions (European pop., 1946): Dutch Reformed Churches, 55%; Anglican Church, 19%; Methodist, 6%; Presbyterian, 5%; Roman Catholic, 5%; others 10%.

* Excluding South-West Africa.

HISTORY. After the discovery of the Cape of Good Hope in 1488 by Bartholomeu Diaz, the Dutch sent the first colonists to the area in 1652. The British seized the territory in 1814 near the close of the Napoleonic wars, when Holland was France's ally. In protest against the British rule, thousands of Boers, settlers of Dutch descent, trekked northward between 1835 and 1838 and set up the republics of Orange Free State and Transvaal, subsequently recognized by the British.

The discovery of gold in Transvaal in 1886 brought an influx of English and other foreigners. British demands that these immigrants be enfranchised by the Transvaal government precipitated the South African War of 1899-1902, won by the British. By the Treaty of Vereeniging (May 31, 1902) the Boers renounced the independence of Transvaal and Orange Free State. In 1910, Cape Colony, Transvaal, Natal and the Orange Free State were set up as the Union of South Africa, with dominion status and with Louis Botha, a former Boer general, as the first prime minister. During World War I, South African forces seized German South-West Africa, over which the Union later received a mandate by the Treaty of Versailles.

When World War II broke out, there was considerable pro-German and anti-British feeling in South Africa. The country went to war against the Axis, however, under Prime Minister Jan C. Smuts.

In the elections of May, 1948, Smuts' United party was defeated by a Nationalist-Afrikaner coalition, which favored strict racial segregation. Enforcement of this policy led to severe racial disturbances and unrest and a prolonged constitutional crisis. The National party (merged with the Afrikaner party in 1951) was continued in office in the April 1953 elections.

GOVERNMENT AND DEFENSE. The Union, as a self-governing nation, has its own Legislature, a Senate of 89 elected or appointed for ten years, and a House of Assembly of 159 members elected for five years. All legislators must be Union nationals of European descent, and suffrage is virtually limited to whites. The Queen is represented by a Governor General named by her after consultation with the Union. He can summon or dissolve the Senate and House, but a general election must be held at least once every five years.

In parliamentary elections held April 15, 1953, the National party won 94 seats, United party 57 and Labour party 5. Three seats are held by representatives of natives.

Political considerations made the draft inexpedient in World War II, and all members of the armed forces were volunteers. The postwar strength of the defense forces is fixed as follows: army, 4,640; air force, 3,319; navy, 863; a total strength of 8,822 as opposed to 5,549 in the prewar establishment. The navy, only slightly expanded in World War II, has 60 small vessels, including 2 destroyers and 3 frigates.

SOCIAL AND ECONOMIC CONDITIONS.
Education. Education for white children is compulsory from 7-16. Primary education is free and, except for vocational schools and the 9 universities, all education is under provincial control.

In 1953 there were 2,676 state and state-aided primary and secondary schools for European scholars, who numbered 540,165, and 7,325 non-European schools with enrollment of 1,172,474. The 9 universities had 24,703 students in 1955.

The official languages are English and Afrikaans. The latter, derived from 17th-century Dutch, is taught in almost all the schools. About 70 per cent of the population over 7 years old understands both languages. European and Asiatic immigration is strictly controlled.

Agriculture. South Africa is predominantly a pastoral country, with less than 15 per cent of its area considered arable. Sheep and cattle raising are the principal occupations, especially in the high veldt. Wool production in 1955-56 was estimated at 314,000,000 lb. In 1954 there were 37,141,579 sheep, 11,604,249 cattle and 491,140 hogs.

Climate and differences in terrain combine to give a great variety of agricultural

products. The staple crop is maize, grown widely with a production varying from 1½ to 3 million tons annually. In southwest Cape Province, products of the Mediterranean type predominate, while in the coastal belt of Natal and in northern Transvaal, subtropical crops, especially sugar, are grown.

Production of leading crops in 1955-56 was estimated as follows: maize, 3,283,000 metric tons; wheat, 795,000 tons; tobacco, 17,900 tons; sugar, 842,000 tons.

Manufacturing and trade. Food, beverages and tobacco, and metal products are leading products. As a result of the need for armaments in World War II, the Union's manufacturing is no longer mainly devoted to agricultural processing. A war-time iron and steel industry was established, and cement, chemical, textile and auto assembly plants were expanded. Steel production (1956) was 1,608,000 metric tons; pig iron, 1,365,600 tons; cement, 2,470,800 tons. In 1952-53 there were 16,064 factories with 819,658 workers; gross value of production was £SA1,165,224,000. The major industrial area is southern Transvaal.

Trade statistics (in millions of South African pounds):

	1954	1955†	1956†
Exports*	321.4	368.9	412.6
Imports	443.6	482.2	494.7

* Excluding gold. † Including South-West Africa.

Chief exports in 1956 (besides gold estimated at £SA193,200,000) were wool (15%) and diamonds (8%). Main customers (1956) were Britain (26%), Rhodesia and Nyasaland (13%) and the U. S. (7%); leading suppliers, Britain (32%), the U. S. (20%) and Germany (6%). Principal imports included textiles, farm and industrial machinery, motor vehicles and petroleum products.

Communications. The well-organized railway system, mostly Union-controlled, totaled 13,400 miles in 1954. Roads suitable for motor traffic amounted to 100,000 miles. According to *Lloyd's Register*, the merchant marine had 141 vessels (100 tons and over) aggregating 166,802 gross tons on June 30, 1956.

Finance. Recent data are as follows (in millions of South African pounds):

	1955-56	1956-57*	1957-58†
Revenue	317.0	275.7	286.5
Expenditure	342.8	263.7	273.0

* Revised budget estimate. † Budget estimate.

The gross public debt of the Union on Dec. 31, 1956, was £SA1,007,200,000, of which £SA73,000,000 was external.

NATURAL FEATURES AND RESOURCES; CLIMATE. The Union has a high interior plateau, or veldt, nearly half of which averages 4,000 feet in elevation. There are no important mountain ranges, although

the Great Escarpment, separating the veldt from the coastal plain, rises to over 10,000 feet. The principal river is the Orange, rising in Basutoland and flowing westward for 1,300 miles through the Union's center to the Atlantic.

Extensive mineral resources account for the economic prosperity. The Union is the world's leading gold producer. Diamond production is now surpassed in importance by coal. Mineral production for 1956 included gold, 15,896,693 oz.; coal, 35,569,818 short tons; copper, 47,201 tons; diamonds, 2,577,017 carats; iron ore (60-65% metal content), 2,270,000 tons; (1955) asbestos, 119,500 tons; chromite, 596,000 tons; manganese ore, 648,000 tons; platinum, 388,830 oz.; silver, 1,461,000 oz. Uranium, gypsum, tin and tungsten also are mined.

The whaling industry, centered at Durban on the east coast, produces considerable amounts of whale oil. The Union has extensive fishery resources along the 1,500 miles of coast line.

Except for the western semi-arid regions, the climate is generally subtropical, much like that of northern Florida. Rainfall averages about 40 inches a year on the east coast and decreases sharply westward. The mean annual temperature is remarkably uniform; at Johannesburg it is 60.6°, with January the hottest month. Most of the rainfall occurs from October to March.

SOUTH-WEST AFRICA—Status: Mandate.

Administrator: Daniel du P. Viljoen.

Capital: Windhoek (population 23,359).

Agricultural products: hides and skins, butter, corn, wheat.

Minerals: diamonds (1956: 988,653 carats), vanadium concentrates, tungsten, lead, tin, iron ore, copper.

The mandate, bounded on the north by Angola, and on the east by Bechuanaland and the Union of South Africa, was discovered by the Portuguese explorer Diaz in the late 15th century. It is for the most part a portion of the high plateau of South Africa with a general elevation of from 3,000 to 4,000 feet. It became a German colony in 1884 but was conquered by South African forces in 1915, becoming a Union mandate by the terms of the Treaty of Versailles. The Union of South Africa's application for incorporation of the territory into the Union was rejected by the United Nations assembly on Dec. 14, 1946, and the Union was invited to prepare a trusteeship agreement instead. By a law passed in April, 1949, however, the territory was brought into much closer association with the Union—including representation in the Union Parliament.

The country in general is better suited to grazing than to the raising of crops because of the light rainfall. The karakul

sheep industry is particularly well-developed; in 1956, 2,802,927 pelts were exported. The principal port is Walvis Bay.

ZANZIBAR—Status: Protectorate.

Capital: Zanzibar (population 60,000).

Sultan: Seyyid Sir Khalifa bin Harub.

British Resident: Sir Henry Potter.

Foreign trade (1955): exports, £4,955,124 (47% to Indonesia); re-exports, £1,826,571; imports, £6,702,661 (28% from Britain). Chief export: cloves (80%).

Agricultural products: cloves (1956: 12,044 long tons), clove oil, coconut oil, copra.

The protectorate consists principally of the islands of Zanzibar (640 sq. mi.) and Pemba (380 sq. mi.), just off the East African coast. Before 1890, the sultanate's territory also included a large area on the mainland, now comprising Italian Somaliland, Kenya and Tanganyika Territory. It was proclaimed a British protectorate Nov. 4, 1890. The British Resident administers the government, but the Sultan still retains considerable authority.

The principal industry is the production of cloves—about 80 per cent of the world supply.

The climate is excessively hot and moist, with a mean annual temperature of 80.5°. June to September is the coolest season of the year.

WESTERN HEMISPHERE

BAHAMAS—Status: Colony.

Capital: Nassau (population 36,246).

Governor: Sir Raynor Arthur.

Foreign trade (1956): exports (including re-exports), £1,195,531 (57% to the U. S.); imports, £12,712,049 (53% from the U. S.). Chief exports: lumber (26%), crawfish, pit-props.

Agricultural products: tomatoes, citrus fruit, sisal.

Sea products: sponges, lobsters, crawfish.

The Bahamas are an archipelago of about 3,000 islands, islets (cays) and rocks, east of Florida and north of Cuba, extending from N.W. to S.E. for about 800 miles. Only about 20 of the islands are inhabited; the most important is New Providence (20 sq. mi.) on which Nassau is located. The islands were reached by Columbus in Oct., 1492, and were a favorite pirate resort in the early 18th century. They have been a Crown colony since 1717. The Constitution provides for a nominated Legislative Council and a popularly elected Assembly. The Governor is advised by an Executive Council.

Over 85 per cent of the population is Negro. The tourist trade is of paramount importance, especially at Nassau, which is a favorite winter resort. In 1956, 155,003 tourists visited the colony. The climate is exceptionally agreeable, with mean temperatures ranging from 60° (January to

March) to 88° (June to September). The rainy season is May through October; annual average fall at Nassau is 18 inches. Hurricanes occur usually from July to October.

BARBADOS—Status: Colony.

Capital: Bridgetown (population 13,345). Governor: Sir Robert Arundell.

Prime Minister: Sir Grantley Adams.

Foreign trade (1956): exports, BWI\$36,204,012 (53% to Britain); imports, BWI\$60,917,300 (35% from Britain). Chief exports: sugar (67%), molasses (12%), rum.

Agricultural products: sugar (1955: 151,229 long tons), cotton, maize, cassava.

Manufactures (1956): rum (1,675,837 wine gal.), molasses.

Barbados, an island east of the Windward group in the West Indies, has been a British possession since 1627; it is believed to have been first visited by the Portuguese. The colony has a nominated Legislative Council and a popularly elected Assembly of 24 members. Under a ministerial system of government inaugurated Feb. 1, 1954, the Prime Minister and 4 other members of the Executive Committee (all 5 being members of the Assembly) exercise executive responsibility for most of the departments of government, except defense and foreign affairs.

The island is very densely populated (about 1,400 per sq. mi.). About 77 per cent of the inhabitants are Negro, 5 per cent white and the remainder of mixed blood. Approximately 70 per cent of the total area is cultivated and half of this is devoted to sugar, which is the staple product; there are sugar and molasses plants and several rum distilleries.

Barbados has an agreeable climate, with temperatures that range between 70° and 86°, rarely below 65°. The cold season (December through May) is also the dry season; average annual rainfall is 60 inches, with September the wettest month.

BERMUDAS—Status: Colony.

Capital: Hamilton (population 3,500).

Governor: Lt. Gen. Sir John Woodall.

Foreign trade (1956): exports, £511,581; re-exports, £4,154,343; imports, £13,159,853 (53% from the U. S.). Chief domestic exports: pharmaceuticals (42%), concentrated essences.

Agricultural products: lily bulbs, potatoes, vegetables, arrowroot.

The Bermudas comprise an archipelago of about 360 small islands, 580 miles east of North Carolina. The largest is (Great) Bermuda or Main Island. Discovered by Juan Bermudez, a shipwrecked Spaniard, early in the 16th century, the islands were settled in 1612 by an offshoot of the Virginia Company and became a Crown colony in 1684. The Governor is assisted by nominated Executive and Legislative Councils and a popularly elected Assembly of 36 members. In 1940, sites on the islands

were leased for 99 years to the U. S. for air and navy bases. Bermuda is also the headquarters of the West Indies and Atlantic squadron of the Royal Navy. The most important factor in the colony's economy is the tourist trade; in 1956, 108,055 persons visited Bermuda. The arable land is devoted to horticulture rather than agriculture and a large selection of vegetables and flowers provide the principal crops. The colony does not approach self-sufficiency and is heavily dependent on food imports.

Bermuda possesses one of the most delightful climates in the world. The mean annual temperature is 71°, with extremes of 49° and 94°. Rainfall averages 58 in. annually.

BRITISH GUIANA—Status: Colony.

Capital: Georgetown (population 97,821).

Governor: Sir Patrick Renison.

Foreign trade (1956): exports (including re-exports), BG\$94,692,256 (40% to Canada, 32% to Britain); imports, BG\$100,159,340 (45% from Britain). Chief exports: sugar (44%), bauxite (31%), rice (10%).

Agricultural products (1956): sugar (263,333 long tons), rice (71,090 tons), copra, coffee, fruit.

Minerals (1956): bauxite (2,480,966 long tons), gold (15,815 oz.), diamonds (29,816 carats).

Forest products: balata, timber.

The only British possession in South America proper, British Guiana is on the northeastern coast between Venezuela and Surinam (Dutch Guiana). Settled by the Dutch in the 17th century, it was occupied by the British in 1796 and ceded to them at the end of the Napoleonic wars. Behind the low plain which contains the farm area is a higher area containing forest and mineral resources. A new Constitution inaugurated Apr. 1, 1953, provided for a bicameral Legislature, with a lower house largely elected under universal adult suffrage, and an Executive Council with a majority of ministers drawn from the lower house on whose advice the Crown-appointed Governor was bound to act. Following charges of Communist infiltration into the government, British military and naval reinforcements were dispatched to the colony; and on Oct. 9, 1953, the Constitution was suspended.

The heterogeneous population included (1955) East Indians, 48.3%; Negroes, 34.8%; mixed, 11.2%; Amerindians, Portuguese and other Europeans, and Chinese.

Forest resources, mostly unexploited, have been estimated at about 40,000,000,000 cu. ft. of merchantable timber. Railway mileage is 110, and highway mileage about 700.

The coastland climate is relatively hot and humid, with average temperatures of

78° in January and 81° in October, and only a slight variation between day and night. Inland temperatures are roughly 3° higher. Rainfall is heavy along the coast—about 88 in. annually at Georgetown.

BRITISH HONDURAS—Status: Colony.

Capital: Belize (population 31,221).

Governor: Sir Colin Thornley.

Foreign trade (1956): exports (including re-exports), BH\$9,973,040; imports, BH\$15,850,630. Chief exports: mahogany (24%), pine.

Agricultural products: bananas, sugar cane, citrus fruits.

Forest products (1956): cedar lumber (696,221 cu. ft.) and logs (3,006 cu. ft.), mahogany lumber (8,143,393 cu. ft.) and logs (52,964 cu. ft.), pine lumber (7,265,172 cu. ft.), chicle (659,100 lb.).

British Honduras is bounded on the north by Mexico and on the west and south by Guatemala. It was settled in 1662 by woodcutters from Jamaica. An irregular form of local government continued until 1871, when it became a Crown colony; it was separated from Jamaica in 1884. The Governor is assisted by an Executive Council and by a partially elected Legislative Assembly.

The colony's economy is dependent upon timber and other forest exports. Agriculture has never been adequately developed. There are no railways, and road development is backward.

Basic internal communications are by river. The Belize river is navigable, at least by light craft, for most of the year as far as the Guatemalan border, the other rivers for much shorter distances.

The extremely heterogeneous population included (1946) creoles (Negroes), 38.3%; mixed, 31%; Amerindians, 16.9%; Caribs, 7%; Europeans, 3.9%; and East Indians, 2.3%.

The climate is subtropical, with maximum recorded temperature of 98°, and minimum of 50°. Rain falls mostly from May to February, and almost continuously from October through December.

Canada

(Member of Commonwealth of Nations)

Area (land only): 3,619,616 square miles.*

Population (est. March 1, 1957): 16,420,000 (1951: British 48%; French 31%; German 4%; Ukrainian 3%; others 14%).

Density per square mile: 4.5.

Ruler: Queen Elizabeth II.

Governor General: Vincent Massey.

Prime Minister: John Diefenbaker.

Principal cities (census 1956)*: Montreal, 1,094,448 (seaport); Toronto, 662,096 (manufacturing center); Vancouver, 361,952 (Pacific seaport); Winnipeg, 256,683 (grain); Hamilton, 237,749 (iron and steel); Edmonton, 224,003 (petroleum); Ottawa, 215,113 (capital); Calgary, 177,861 (farming); Quebec, 166,996 (seaport); Windsor, 120,525 (automobiles).

Monetary unit: Canadian dollar.

Religions (census 1951): Roman Catholic 43%; United Church 20%; Anglican 15%; Presbyterian 6%; Baptist 4%; others 12%.

* Total area, including water: 3,845,774 square miles.

† Preliminary figures.

HISTORY. The Norse explorer Leif Ericsson probably reached the shores of Canada (Labrador or Nova Scotia) in A.D. 1000, but the history of the white man in the country actually began in 1497, when John Cabot, an Italian in the service of Henry VII of England, reached the shore of Newfoundland or Nova Scotia. Canada was taken for France in 1534 by Jacques Cartier. The actual settlement of New France, as it was then called, began in 1604 at Port Royal in what is now Nova Scotia; in 1608 Quebec was founded. France's colonization efforts were not very successful, but French explorers by the end of the 17th century had penetrated beyond the Great Lakes to the western prairies and south along the Mississippi to the Gulf of Mexico. Meanwhile, the English Hudson's Bay Company had been established in 1670. Because of the valuable fisheries and fur trade, a conflict developed between the French and English; in 1713, Newfoundland, Hudson Bay and Nova Scotia (Acadia) were lost to England.

During the Seven Years' War (1756-63), England extended its conquest, and the British general, Wolfe, won his famous victory over Montcalm outside Quebec (Sept. 13, 1759). The Treaty of Paris (1763) put Canada under English control.

At that time the population of Canada was almost entirely French, but in the next few decades thousands of British colonists emigrated to Canada from the British Isles

and from the American colonies. Partly to placate the French who were concentrated in Quebec, Canada was divided into Upper (British) and Lower (French) Canada in 1791. In 1840 the two provinces again were joined under one government, and in 1849 the right of Canada to self-government was recognized. By the British North America Act of 1867, the Dominion of Canada was created through the confederation of Upper and Lower Canada, Nova Scotia and New Brunswick. Prince Edward Island joined the Dominion in 1873. In 1869 Canada had purchased from the Hudson's Bay Company the vast middle west (Rupert's Land) from which the provinces of Manitoba (1870), Alberta and Saskatchewan (1905) were later formed. In 1871 British Columbia joined the Dominion. The country was linked from coast to coast in 1885 by the Canadian Pacific Railway.

During the formative years between 1867 and 1896, the Conservative party led by Sir John A. Macdonald governed the country, except during the years 1873-78. In 1896 the Liberal party took over and under Sir Wilfrid Laurier, an eminent French Canadian, ruled until 1911. In World War I, more than 500,000 Canadian soldiers fought for the Allied cause. After the Treaty of Versailles, Canada, a full-fledged nation, was admitted to the League of Nations and appointed its own representatives in foreign countries. By the Statute of Westminster (1931) the British Dominions, including Canada, were formally declared to be partner nations with Britain, "equal in status, in no way subordinate to each other," and bound together only by allegiance to a common Crown. The Liberal party under W. L. Mackenzie King won the elections in 1935 and was returned to

Canadian Governors General and Prime Ministers Since 1867

Term of office	Governor General	Term	Prime Minister	Party
1867-1869	Viscount Monck	1867-1873	Sir John A. Macdonald	Conservative
1869-1872	Baron Lisgar	1873-1878	Alexander Mackenzie	Liberal
1872-1878	Earl of Dufferin	1878-1891	Sir John A. Macdonald	Conservative
1878-1883	Marquess of Lorne	1891-1892	Sir John J. Abbot	Conservative
1883-1888	Marquess of Lansdowne	1892-1894	Sir John S. D. Thompson	Conservative
1888-1893	Baron Stanley	1894-1896	Sir Mackenzie Bowell	Conservative
1893-1898	Earl of Aberdeen	1896(2 mos)	Sir Charles Tupper	Conservative
1898-1904	Earl of Minto	1896-1911	Sir Wilfrid Laurier	Liberal
1904-1911	Earl Grey	1911-1917	Sir Robert L. Borden	Conservative
1911-1916	Duke of Connaught	1917-1920	Sir Robert L. Borden	Unionist
1916-1921	Duke of Devonshire	1920-1921	Arthur Meighen	Unionist-National, Conservative
1921-1926	Viscount Byng			
1926-1931	Viscount Willingdon	1921-1926	W. L. Mackenzie King	Liberal
1931-1935	Earl of Bessborough	1926(3 mos)	Arthur Meighen	Conservative
1935-1940	Baron Tweedsmuir	1926-1930	W. L. Mackenzie King	Liberal
1940-1946	Earl of Athlone	1930-1935	Richard B. Bennett	Conservative
1946-1952	Viscount Alexander	1935-1948	W. L. Mackenzie King	Liberal
1952-	Vincent Massey	1948-1957	Louis S. St. Laurent	Liberal
		1957-	John Diefenbaker	Conservative

power in 1940 and 1945. Louis S. St. Laurent succeeded King on Nov. 15, 1948, and the Liberals were continued in office in the elections of 1949 and 1953. They lost their majority in the elections of June 10, 1957, and Progressive-Conservative leader John Diefenbaker formed a new government on June 21, 1957.

Newfoundland became Canada's tenth province on March 31, 1949, following a plebiscite held July 22, 1948, in which the people voted by a narrow margin to unite with Canada.

GOVERNMENT AND DEFENSE. Canada, a self-governing member of the Commonwealth of Nations, is a federal union of 10 provinces whose powers are laid down in the British North America Act of 1867. The executive powers nominally rest in the hands of the Governor General, who represents the Queen and is appointed by her upon the recommendation of the Canadian government.

Actually, the Governor General acts only with the advice of the Canadian Prime Minister and the members of the Cabinet, who at the same time sit in the federal Parliament. The Parliament has two houses: a Senate numbering 102 members appointed for life, and a House of Commons numbering 265 members apportioned according to provincial population. Elections are held at least every five years or whenever the party in power is voted down in the House of Commons or considers it expedient to appeal to the people. The Prime Minister is the leader of the majority party in the House of Commons. Laws must be passed by both houses of Parliament and signed by the Governor General in the Queen's name. Results of Parliamentary elections on June 10, 1957, were as follows: Progressive Conservatives, 110; Liberals, 104; Co-operative Commonwealth Federation, 25; Social Credit, 19; Independents and others, 6 (one vacancy).

The members of the Cabinet (June 1957): John Diefenbaker (Prime Minister, External Affairs), Howard Green (Public Works), Donald Fleming (Finance), Alfred J. Brooks (Veterans Affairs), George Hees (Transport), Leon Balcer (Solicitor General), G. R. Pearkes (Defense), Gordon Churchill (Trade and Commerce), E. Davie Fulton (Justice), George Nowlan (National Revenue), D. S. Harkness (Northern Affairs), Ellen Fairclough (Secretary of State), Angus MacLean (Fisheries), Michael Starr (Labor), William M. Hamilton (Postmaster General), James M. Macdonnell (without portfolio), William J. Browne (without portfolio).

The ten provincial governments are nominally headed by Lieutenant Governors appointed by the federal government, but the executive power in each actually is vested in a Cabinet headed by a Prime

PROVINCES AND TERRITORIES

Province	Land area, sq. mi.	Population (Census 1956)

¹ Social Credit; ² Liberal-Progressive; ³ Progressive Conservative; ⁴ Liberal; ⁵ Union Nationale; ⁶ Co-operative Commonwealth Federation.

* Commissioner.

Minister, who is leader of the majority party. In nine of the ten provinces the legislature is composed of a one-house assembly elected by the people for 4 years. In Quebec there is a second chamber, the Legislative Council, composed of nominees of the Provincial Government.

Judicial System. The judicial system consists of a Supreme Court in Ottawa (established in 1875), with appellate jurisdiction, and a Supreme Court in each province as well as county courts with limited jurisdiction in most of the provinces. The Governor General in Council appoints the judges of these courts.

Defense. Canadian armed forces, consisting of the Army, Royal Canadian Air Force and the Royal Canadian Navy, are under the Ministry of National Defense. Conscription was in effect during World

War II. Canadian casualties were 104,125, including 41,371 dead.

On Aug. 31, 1955, strength of the army was 47,445; navy, 19,180; air force (June 1, 1955), 49,563. In Dec. 1956 the navy had in active service and reserve one light aircraft carrier, 2 cruisers, 11 destroyers, 53 frigates and escort vessels and numerous ancillary craft.

The Royal Canadian Mounted Police is the constabulary maintained by the federal government. Among its duties are the enforcement of smuggling laws, suppression of traffic in drugs, protection of government buildings and dockyards, and counter-subversive work.

SOCIAL AND ECONOMIC CONDITIONS.

Education. Elementary schools in all provinces except Quebec are free, as is secondary education in most provinces. The supreme education authority in Quebec is a council of public instruction with two aides supervising the Roman Catholic and Protestant schools respectively. In the rest of the provinces the system is non-denominational, and education for the most part is compulsory for all children between the ages of 8 and 14. Of Canada's 28 universities, 7 are state-controlled and 21 are independent of provincial control. Leading universities are Toronto, which belongs to the first group, and McGill (Montreal), which belongs to the second group.

Agriculture. Agriculture, including horticulture, fruit-growing and the raising of stock and poultry, is the largest single industry. Canada is one of the world's greatest wheat-exporting countries; production is concentrated in Manitoba, Saskatchewan and Alberta. The estimated value of field crops in 1956 was \$1,750,000,-000 (preliminary).

Stock raising and dairy farming have grown greatly since 1920. Ontario and Quebec are the most important dairying provinces. On June 1, 1956, Canada had 10,465,000 cattle, 5,680,000 hogs, 1,706,000 sheep and 851,500 horses. Dairy production in 1956 included butter, 150,836 short tons; milk, 8,651,541 tons; cheese (cheddar), 42,461 tons. Wool production in 1956 was 8,079,000 pounds, greasy basis.

Industry. Canadian manufactures rely mainly on domestic raw materials; growing industries which depend largely on materials imported in a raw or semi-finished state include the manufacture of automobiles, sugar and rubber goods as well as the iron and steel industry in Nova Scotia, Quebec and Ontario. The latter two provinces account for more than 80 per cent of all manufactures. The abundance of cheap water power is one of the chief factors in the growth of Canadian indus-

try. Production of steel ingots and castings in 1956 was 5,305,805 short tons; pig iron, 3,568,196 tons. In 1955 the value of factory shipments was \$19,469,013,000 (preliminary); in 1954 there were 38,028 plants which employed 1,267,966 persons. The most important industries by value of output were pulp and paper, nonferrous-metals smelting and refining, petroleum products, meatpacking, motor vehicles and sawmill products. Production of motor vehicles totalled 470,674 in 1956 (preliminary).

Trade. Canada is one of the great trading nations of the world. The bulk of its foreign commerce is in raw or semi-finished products.

Trade statistics (in millions of Canadian dollars):

Year	Imports	Exports	Re-exports
1952	4,030.5	4,301.1	54.9
1953	4,382.8	4,117.4	55.2
1954	4,093.2	3,881.3	65.6
1955	4,712.4	4,281.8	69.5
1956	5,710.4	4,789.5	73.4

In 1956, Canada's principal customers were the U. S. (59%), Britain (17%), western Germany (2.9%), Japan (2.7%) and Union of South Africa (1.4%). Leading suppliers were the U. S. (73%), Britain (8.5%), Venezuela (3.6%), western Germany (1.6%) and Japan (1.1%). Leading exports were newsprint (15%), wheat (11%), planks and boards (6.8%), wood pulp (6.3%) and aluminum and products (5.0%). Leading imports in 1955 were machinery (non-farm) (9%), automobile parts (5%), crude petroleum (5%), farm implements and machinery (4%) and petroleum products (3%).

CROP ACREAGE AND PRODUCTION

(In thousands, provisional figures)

	Acres		Bushels	
	1955	1956	1955	1956
Wheat	21,506	21,340	494,140	537,796
Oats	11,178	11,972	407,783	535,394
Barley	9,933	8,722	252,410	277,782
Rye	780	557	14,754	8,599
Corn	507	439	31,510	23,918
Potatoes	308	303	66,035	66,815

Communications. Because Canada's exports are to a large extent bulky raw materials, cheap water transportation is essential. The country's system of canals, especially those connecting the Great Lakes, forms an integral part of the inland communications system. Canal traffic amounted to 40,015,625 short tons in 1956; 23,066,261 tons of freight were carried through the Welland Canal alone.

Railway facilities have been improved in relation to the export of wheat from the prairie provinces and to the development of the mineral and wood pulp industries in northern Quebec and northern Ontario.

About 90 per cent of the railway mileage of 43,000 (main-line track) is under the control of two systems, the government-owned Canadian National and the privately-owned Canadian Pacific. Canada's principal merchant marine lines are the Canadian Pacific, which operates a subsidiary ocean steamship company, and the Canadian National, which has minor steamship lines under its control. The merchant marine on Dec. 31, 1956, numbered 2,656 vessels (100 tons and over) with gross tonnage of 2,110,565.

On Dec. 31, 1954, Canada had 524,055 mi. of highways, of which 192,616 mi. were surfaced.

Trans-Canada Air Lines, established in 1937, is controlled by the federal government. In 1956, Canadian airlines carried 3,815,679 revenue passengers and flew 1,547,666,225 passenger-miles. On Jan. 1, 1956, Canada had 4,149,300 telephones.

Finance. Recent data are as follows (in millions of Canadian dollars):

	1955-56	1956-57*	1957-58†
Revenue	4,400.0	5,149.1	5,170.0
Expenditure	4,433.1	4,866.6	5,018.0

* Provisional. † Budget estimate.

The net public debt (gross debt less active assets) on Mar. 31, 1957, was reported at \$10,997,900,000 (preliminary), compared to \$11,280,400,000 on Mar. 31, 1956, \$11,263,100,000 on Mar. 31, 1955, \$11,151,600,000 on Mar. 31, 1954, and \$3,648,691,449 on Mar. 31, 1941.

NATURAL FEATURES AND RESOURCES;

CLIMATE. Covering most of the northern part of the North American continent and with an area larger than that of the United States, Canada's topography is extremely diversified. The northeastern region, including most of Quebec, northern Ontario and Manitoba, and the Northwest Territories, with Hudson Bay in the center, is an important source of minerals, wood pulp and water power. In the east the mountainous maritime provinces have an irregular coast line on the Gulf of St. Lawrence and the Atlantic. The St. Lawrence plain, covering most of southern Quebec and Ontario, and the interior continental plain, covering southern Manitoba and Saskatchewan and most of Alberta, are the principal cultivable areas. They are separated by a forested plateau rising from Lakes Superior and Huron. Westward toward the Pacific, most of British Columbia, Yukon, and part of western Alberta are covered by parallel mountain ranges including the Rockies. The Pacific border of the coast range is ragged with fiords and channels. The highest point in Canada is Mt. Logan, 19,850 ft., located in the Yukon.

Canada has an abundance of large and small lakes. In addition to the Great Lakes

on the United States border, there are nine others which are more than 100 miles long and 35 which are more than 50 miles long.

The two principal river systems are the Mackenzie and the St. Lawrence. The St. Lawrence with its tributaries is navigable for over 1,900 miles and is the commercial artery of eastern Canada.

As most of the Canadian rivers have waterfalls on their courses they are of considerable importance as sources of power. Average monthly production of electricity in 1956 was 6,807,000,000 kwh.

Minerals. Canada's mineral resources are both rich and varied. Mining production in 1956 was valued at \$2,067,699,096. Metals

MAJOR MINERALS

	1955	1956*
Asbestos (tons)	1,063,802	1,038,975
Coal (tons)	14,818,880	14,915,033
Copper (lb.)	651,987,423	706,585,547
Gold (oz.)	4,541,962	4,378,862
Iron ore (tons)	16,283,177	22,526,311
Lead (lb.)	405,525,038	373,349,541
Nickel (lb.)	349,856,997	355,986,460
Petroleum (bbl.)	129,440,247	170,569,200
Silver (oz.)	27,984,204	28,794,573
Zinc (lb.)	866,714,038	847,239,825

* Provisional.

come mainly from two widely separated regions, the mountain ranges of the Pacific coast and the province of Ontario. Copper ore also exists in Quebec, Manitoba and Newfoundland. Production of petroleum centers in Alberta. There are important deposits of uranium in the Northwest Territories.

Forests and Fisheries. The total area of land covered by forests is estimated at 1,300,000 square miles, of which only 435,000 are productive and accessible. Production of sawn lumber was estimated at 7,751,375,000 bd. ft. in 1956. The manufacture of pulp and paper is one of the leading industries. Wood pulp production in 1956 was estimated at 10,743,605 short tons. Newsprint production was estimated at 6,468,815 tons; exports were 5,967,194 tons, of which 5,218,911 tons went to the U. S.

Fishing, Canada's oldest industry, is carried on along the Atlantic and Pacific coasts and on the inland lakes. The most important fish are salmon, cod, herring, mackerel, lobsters, sardines, halibut, haddock, whitefish and trout. The total value of fishery production in 1955 (excluding Newfoundland) was \$181,129,000; the catch totaled 19,141,640 cwt.

Climate. Canada has great variations of climate. South of the Gulf of St. Lawrence, the maritime provinces have an average temperature of 40° for the year and over 60° for the summer months. In Quebec and northern Ontario the winters are cold

and the summers average from 60° to 65°. In southern Ontario the average summer temperature is 65°, with an occasional rise to 90°. The prairie provinces have a distinctly continental climate with comparatively short warm summers and long cold winters. The west coast has a climate similar to that of the southern coast of England. Northwest and northeast of Hudson Bay the climate is too severe for trees.

FALKLAND ISLANDS AND DEPENDENCIES—Status: Crown Colony.

Governor: Edwin P. Arrowsmith.

Capital: Stanley (population 1,135).

Foreign trade (1956): exports, £4,956,000; imports, £3,276,000. Chief export: whale oil.

This sparsely inhabited Crown colony consists of a group of islands in the south Atlantic about 250 miles east of the South American mainland. Dependencies include all islands and Antarctic territory between 20° and 50° w. long., south of 50° s. lat., and between 50° and 80° w. long., south of 58° s. lat. The chief industry is sheep raising, and apart from the production of wool, hides and skins and tallow, there are no known resources. The whaling industry is carried on successfully from South Georgia Island; 185,739 barrels of whale oil were exported in 1955.

The islands were discovered by John Davis in 1592. East Falkland Island was claimed for France in 1764, and West Falkland Island for Britain the following year. The French settlement later passed to Spain, and in 1829 was colonized by Argentina. The Argentines were ejected by the British in 1833 and have since reasserted their claim to the islands many times. In 1914 the Battle of Falkland Islands was fought nearby, resulting in a British victory.

The climate is equable though relatively cold, with temperatures averaging about 47° in midsummer and 37° in midwinter.

JAMAICA AND DEPENDENCIES—Status: Colony.

Capital: Kingston (population 145,000).

Governor: Sir Hugh Foot.

Chief Minister: Norman W. Manley.

Foreign trade (1956)*: exports, £36,906,313 (49% to Britain); re-exports, £1,149,813; imports, £58,312,189 (37% from Britain). Chief exports: sugar and preparations (34%), bananas (14%), bauxite (12%).

Agricultural products (1956): sugar (356,000 long tons), rum (2,087,450 gal.), bananas, citrus fruits, ginger, coffee, pimento.

Mineral: bauxite (1956: 3,545,877 long tons).

* Excluding dependencies.

Jamaica, the largest island in the British West Indies (4,470 sq. mi.), is eighty miles south of the eastern end of Cuba. Its island dependencies include the Turks and

Caicos Islands (about 600 mi. N.E.), Cayman Islands (about 300 mi. N.W.) and two uninhabited cays. It was discovered by Columbus in 1494 and remained in Spanish possession until 1655, when it was taken by the British. According to the Constitution of Nov. 20, 1944, as amended in 1953, the Governor is assisted by a House of Representatives of 32 popularly elected members; a Legislative Council (upper house) of 15 members and an Executive Council of 10 members, of whom the Chief Minister is appointed by the Governor subject to the approval of the House.

Sites were leased for 99 years to the U. S. in 1940 for naval and air bases.

The population includes Negro, 77.7%; mixed, 18.6%; East Indian, white and Chinese.

The colony's economy depends on agriculture, and about 200,000 acres are under cultivation. Sugar took the place of bananas as the chief crop during World War II. Jamaica is virtually the sole source of pimento.

Jamaica's favorable climate makes it attractive to tourists. Temperatures at Kingston range from about 71° to 88°, but are considerably cooler inland. The rainy seasons are in May and October; total fall is about 65 inches a year (33 at Kingston).

LEEWARD ISLANDS—Status: Group of colonies.

Seat of governor: St. John's (Antigua) (population 11,000).

Governor: Alexander T. Williams.

Foreign trade (1955): exports, £3,040,000; imports, £4,520,000. Chief export: sugar.

Agricultural products: sugar, cotton, coconuts, citrus fruits, tobacco.

The Leeward Islands, lying southeast of Puerto Rico, are a group of four colonies—Antigua (108 sq. mi.) and dependencies (63 sq. mi.); Virgin Islands (67 sq. mi.); St. Kitts (68 sq. mi.) and Nevis (50 sq. mi.) and dependency (34 sq. mi.); and Montserrat (33 sq. mi.). They have a common governor but their governments are otherwise separate. They were federated between 1871 and 1956.

In 1940, the U. S. acquired a 99-year lease on sites for a naval and air base on Antigua. The islands are agricultural.

Temperatures average about 76° in January and 81° in August.

TRINIDAD AND TOBAGO—Status: Colony.

Capital: Port of Spain (population 120,000).

Governor: Sir Edward Beetham.

Chief Minister: Eric Williams.

Foreign trade (1956): exports (including re-exports), BWIS\$330,449,366 (35% to Britain); imports, BWIS\$301,810,430 (35% from Britain). Chief exports: crude petroleum

and products (66%), sugar (8%), cacao (3%).

Agricultural products: raw sugar (1956: 160,600 long tons), cacao, coconuts, citrus fruit.

Manufactures: petroleum products (1956: 43,678,644 bbl.).

Minerals (1956): crude petroleum (28,929,000 bbl.), asphalt (141,127 long tons).

The islands of Trinidad and Tobago are 16 and 21 miles, respectively, off Venezuela just north of the Orinoco delta. Both were discovered by Columbus in 1498, and remained Spanish possessions until 1797, when the British took them. They are administered by a Governor, assisted by an Executive Council of 11 members, of whom 8, including the chief minister, are elected by the Legislative Council, 24 of whose 31 members are popularly elected. In 1941 the United States was granted 99-year leases on the islands for naval and air bases covering a total of 25,000 acres.

The soil is rich for the growing of tropical products; sugar and cacao are the principal crops. Trinidad is one of the leading oil producers of the Commonwealth, and the world's most notable source of asphalt, found in Pitch Lake, thirty-eight miles southeast of Port of Spain. Port of Spain is the chief port, and a transshipment point for Orinoco trade. There are several oil refineries. About half of the population is Negro, a third East Indian, and the rest mixed and white.

Trinidad's climate is tropical, with a mean annual temperature of 80°. The rainy season is from May to January (except October). Total annual rainfall is about 65 inches at Port of Spain and varies from 50 to 120 inches elsewhere throughout the colony.

WINDWARD ISLANDS—Status: Group of colonies.

Seat of governor: St. George's (Grenada) (population 5,775).

Governor: Sir Colville M. Deverell.

Foreign trade (1955): exports, \$4,110,000; imports, \$5,390,000.

Agricultural products: arrowroot (St. Vincent), nutmeg (Grenada), mace (Grenada), cacao.

These islands, four in number, form the southern portion of the Lesser Antilles in the Caribbean; they extend approximately 250 miles from the French colony of Guadeloupe on the north to the British colony of Trinidad on the south. Their total area of about 820 square miles divides as follows: Dominica, 304; St. Lucia, 233; St. Vincent, 150; Grenada, 133. The four colonies are not federated and have no common legislature or laws, although they do have a common Governor.

More than two-thirds of the inhabitants are Negroes, nearly one-third mulatto, and about 2 per cent white. Agriculture is the

only industry. St. Vincent has a virtual monopoly on the world supply of arrowroot, and Grenada furnishes about 40 per cent of the world's nutmeg.

Climate is pleasant, although rainfall is heavy, particularly in summer, amounting in places to as much as 200 inches a year (80 at St. George's). The temperature in January averages 77°, in September, 80°.

ASIA

ADEN—Status: Colony and Protectorate. Governor: Sir William Luce.

Foreign trade (1956): exports and re-exports, £44,890,048 (16% to Britain); ships' stores and bunkers, £19,565,875; imports, £71,227,903 (30% from Kuwait).

Manufactures (1956): crude petroleum refined (throughput), 4,615,000 long tons.

The British colony and protectorate of Aden is situated on the volcanic southern tip of the Arabian peninsula, along the Gulf of Aden. The colony (port) of Aden was annexed to Britain in 1839 and was part of the Bombay Presidency until 1932, when it became a separate province with the Chief Commissioner responsible to the Indian government. In 1937 it was transferred from Indian to Imperial control as a Crown colony. It is administered by a Governor and Commander in Chief aided by an Executive Council and a Legislative Council. The 20-odd Sultans who rule their respective territories in the protectorate are responsible to him.

The island of Perim (5 sq. mi.), the Kuria Muria islands, and the island of Kamaran (22 sq. mi.) are attached administratively to Aden.

Aden colony is essentially a transshipment point and bunkering station and is also the commercial center for the Yemen and the African coast opposite. Aden airport is a station on the Khartoum-Karachi air route. Agriculture is unimportant except for some coffee and tobacco, and except for the large petroleum refinery of the British Petroleum Co. Ltd. (formerly Anglo-Iranian Oil Co.), which went into operation in 1954, manufacturing activity is limited to salt, cigarettes and dhow. Delivery of fuel oil to ships totalled 2,514,938 long tons in 1956.

BAHREIN ISLANDS—Status: Protectorate and Sheikdom.

Capital: Manama (population 45,000).

Ruler: Sheik Sir Salman bin Hamad al Khalifah.

British Political Agent: C. A. Gault.

These islands form an archipelago off Arabia's east coast and are nominally an independent sheikdom, but are actually a protectorate of Great Britain, which is represented by a Political Agent. The islands are the center of the Persian Gulf pearl fisheries and the site of an airport on the London-Australia route. The con-

cession for exploitation of petroleum deposits, discovered in 1932, is held by an affiliate of U. S.-owned interests. Output in 1956 was 11,013,702 barrels. Production at the Bahrain refinery in the same year was 71,717,275 barrels. Agriculture is of some importance. Most of the trade of the Saudi Arabian provinces of Nejd and Hasa pass through Bahrain. Chief exports are rice, cotton goods, pearls, coffee and tea.

BORNEO

COLONY OF NORTH BORNEO—Status: Colony.

Capital: Jesselton (population 11,704). Governor: Sir Evelyn Turnbull. Foreign trade (1956)*: exports, Mal.\$120,-875,275 (23% to Britain); imports, Mal.\$117,448,914 (24% from Britain). Chief exports: rubber (33%), timber (22%), copra (19%).

Agricultural products: rubber (exports 1956: 19,859 long tons), rice, copra.

Forest products: timber, cutch, rattans.

* Excluding transit trade.

The Colony of North Borneo, constituting the extreme northern portion of the island of Borneo, consists largely of highlands and occasional open valleys and plateaus. The territory was a British protectorate administered under a royal charter by the British North Borneo Company from 1881 until July 15, 1946, when it assumed the status of a Crown colony. It was occupied by Japanese troops from 1942 until 1945. Labuan (pop. 9,000; area, 35 sq. mi.), a small island off the North Borneo coast, was transferred from the jurisdiction of the Straits Settlements to that of North Borneo in 1946.

The population is comprised largely of aboriginal tribesmen living on a very primitive level of culture and social organization. In 1951, 72.7% of the population was native, 22.3% Chinese; there were 1,213 Europeans. Mineral resources are believed to be considerable, but the colony's income is based on agricultural and jungle produce.

The climate of North Borneo is tropical, with a mean annual temperature range of only 3°, although extremes of 64° and 91° have been recorded. The total rainfall varies between 60 and 180 inches annually and is heaviest in the last three months.

BRUNEI—Status: Protectorate.

Capital: Brunei (population 11,000).

Sultan: Omar Ali Saifuddin.

British Resident: J. O. Gilbert.

Foreign trade (1956): exports, Mal.\$314,-260,724; imports, Mal.\$114,083,317. Chief export: petroleum (99%).

Agricultural products: rice, rubber.

Mineral: petroleum (1956: 42,000,000 barrels).

Brunei lies on the northwestern coast of Borneo, entirely surrounded by Sarawak. It was placed under British protection in

1888, and in 1906 a treaty was concluded whereby the native Sultan yielded administration of the state to a British Resident. The Governor of Sarawak was appointed High Commissioner for Brunei in 1948. Japanese occupied Brunei in 1942-45.

Most of the inhabitants are Malays and Borneans; in 1955, 19% were Chinese and only 1.5% European. The bulk of the population lives in and around the capital, situated on the Brunei River 9 miles from its mouth. The interior is largely forested and contains rich timber. All petroleum is exported to Sarawak for refining.

Brunei's climate is comparable to that of North Borneo, except that the wet season is longer, often lasting until March.

SARAWAK—Status: Colony.

Capital: Kuching (population 60,000).

Governor: Sir Anthony F. Abell.

Foreign trade (1956): exports, Mal.\$487,-000,860; imports, Mal.\$463,886,635. Chief exports: petroleum and products (73%), rubber (14%), pepper (5%).

Agricultural products: rubber (exports 1956: 41,234 long tons), pepper (19,818 tons), copra, rice.

Minerals: petroleum, gold, silver, coal.

Sarawak extends along the northwestern coast of Borneo for about 500 miles. In 1841 part of the present territory was granted by the Sultan of Brunei to Sir James Brooke. The state, enlarged by additional concessions made between 1861 and 1905, continued to be ruled by members of the Brooke family until the Japanese occupation in Dec. 1941. A British protectorate since 1888, Sarawak became a Crown colony July 15, 1946, through agreement between the British government and the then ruling Rajah, Sir Charles Vyner Brooke.

The colony is mountainous and well watered; inland communication is largely by water. Most of the inhabitants are Malays, Dyaks and Chinese. The most important mineral is petroleum, which was discovered at Miri in 1909 and subsequently worked by Sarawak Oilfields, Ltd. A large proportion of the petroleum exports reflects petroleum imported from Brunei and refined in Sarawak. There are also important forest resources. Under the enlightened rule of the Brookes, Sarawak became a highly organized community.

Sarawak's climate is healthful; the temperature seldom rises above 90° and falls to 70° at night. Average annual rainfall at Kuching is 160 inches.

Ceylon

(Member of Commonwealth of Nations)

Area: 25,332 square miles.

Population (est. July 1, 1956): 8,929,000 (1953: Sinhalese, 69%; Tamil, 21%; Moors,

6%; Burghers and Eurasians, .5%; Europeans [6,909] and others, 3.5%).

Density per square mile: 352.5.

Ruler: Queen Elizabeth II.

Governor General: Sir Oliver Goonetilleke.

Prime Minister: S.W.R.D. Bandaranaike.

Principal cities (census 1953): Colombo, 423,481 (capital); Dehiwala—Mt. Lavinia, 80,086 (suburb of Colombo); Jaffna, 77,218 (fibers, tobacco).

Monetary unit: Ceylonese rupee.

Languages: English, Sinhalese, Tamil.

Religious (est.): Buddhist, 61%; Hindu, 22%; Moslem, 7%; Christian (mainly Roman Catholic), 9%; others, 1%.

HISTORY. The island of Ceylon lies in the Indian Ocean 12 miles southeast of the southern tip of India. Known to the Greeks and Romans as Taprobane and to Mohammedan seamen as Serendib, it is reputed to have been invaded from India in 504 B.C. by Vijaya, the first Sinhalese King. Buddhism was introduced in the third century B.C. In subsequent centuries the island was invaded and occupied several times by Indian princes.

Ceylon was visited in 1505 by the Portuguese, who found the island divided into seven native kingdoms. The Portuguese settlers were ousted in the middle of the 17th century by the Dutch, who in turn were defeated by an English force in 1796. Ceylon became a Crown colony in 1796, and was formally ceded to England by the treaty of Amiens in 1802.

The Donoughmore Constitution of 1931 vested control over most local affairs in a State Council, which had an elected majority. The arrangement proved generally unacceptable, and after World War II a commission which was headed by Lord Soulbury drafted another Constitution. The Ceylon Independence Act received royal assent on Dec. 10, 1947, and on Feb. 4, 1948, Ceylon became a full-fledged, self-governing dominion, with Stephen Senanayake as Prime Minister. On his death, Mar. 22, 1952, his son Dudley took office. The latter resigned on account of ill health on Oct. 12, 1953, and was succeeded by Sir John Kotelawala. The leftist People's United Front won the April 1956 elections and its leader, S.W.R.D. Bandaranaike, formed a new government on April 12.

GOVERNMENT. Under the 1946 Constitution, Ceylon's government is headed by the Crown-appointed Governor General, who is advised by a Council of Ministers headed by the Prime Minister. The bicameral Parliament consists of a House of Representatives of 101 members (95 elected by full adult suffrage), and a Senate composed of 15 elected and 15 appointed members.

Elections of April 1956 returned to the House of Representatives 51 People's United Front, 14 Socialists, 10 Federalists,

8 United Nationalists, 3 Communists and 9 others.

The 1947 defense agreement permits the stationing of British troops on the island. The Royal Navy base at Trincomalee and the R.A.F. station at Katunayake reverted to Ceylon in 1957.

SOCIAL AND ECONOMIC CONDITIONS. Free education is available in public schools from kindergarten to university. The illiteracy rate in 1953 (5 years and over) was 34.2%. In 1956 there were 6,187 Sinhalese and Tamil schools with 1,372,752 pupils and 657 English schools with 321,127 pupils. The University of Ceylon (founded in 1942) had 2,429 students in 1955-56.

Ceylon is heavily dependent on food imports, particularly rice, the staple food. A large part of the cultivated land (25% of the total area) is devoted to the chief export crops—tea (1956: 375,577,652 lb.), rubber (1956: 95,383 long tons) and coconut products, all of which are grown for the most part on plantations. Other crops include rice (1956: 26,900,000 bu. paddy), fruits, cinnamon and citronella. In 1956 there were 1,450,156 cattle, 789,521 buffalo and 471,298 goats.

Recent foreign-trade data are as follows (in millions of Ceylonese rupees):

	1954	1955	1956
Exports	1,809	1,940	1,735
Imports	1,397	1,460	1,629

Leading exports in 1956 were tea (60%), rubber (16%) and coconut oil (6%). Leading customers were Britain (29%), China (10%) and the U. S. (8%); leading suppliers, Britain (21%), India (13%) and Burma (9%).

Ceylon is well served by highways and the government railway, which total about 19,000 and 895 miles, respectively. A fast ferry connects railheads in India and Ceylon.

NATURAL FEATURES AND RESOURCES; CLIMATE. Most of the island is flat, but mountains in the south rise to 8,000 feet. The island extends to a maximum of 270 miles north and south, and 140 miles east and west. There are numerous rivers, the longest of which is the Mahaweli-Ganga (206 miles).

Mineral resources include graphite (plumbago) (1956 exports: 9,162 long tons), gem stones, mica, magnesite and vanadium; uranium deposits have been reported.

A distinctive feature of Ceylon's climate is the monsoon, which appears in May and in October–November. Annual rainfall varies from 40 inches in the northeast to more than 200 in the southwest. The mean annual temperature at Colombo is 80.5°.

CYPRUS—Status: Colony.

Capital: Nicosia (pop. 1956: 49,000).

Governor: Field Marshal Sir John Harding.

Foreign trade (1956): exports, £20,946,-243 (34% to western Germany); re-exports, £1,405,242; imports, £39,097,303 (45% from Britain). Chief exports: cupreous concentrates (32%), pyrites (27%).

Agricultural products: barley, wheat, potatoes, wine, fruit.

Minerals: copper ore (concentrates), pyrite ore.

Cyprus, third largest island in the Mediterranean, is roughly equidistant from Asia Minor to the north and Syria to the east. The site of early Phoenician and Greek colonies, it passed in 1571 from the rule of Venice to that of the Ottoman Empire, under which it remained until 1878, when it was ceded to Great Britain for administrative purposes. On the outbreak of hostilities with Turkey in World War I (Nov. 5, 1914), the island was formally annexed to Great Britain.

The Governor is advised by a nominated Executive Council, but he alone possesses the lawmaking power.

Demands for self-determination and union with Greece, marked by terrorism, became a major problem in 1955-56.

The people are mainly Greeks (80.8% by the last census—1946) and Turks (17.7%), although there is an Armenian colony and a small Latin colony. More than 80 per cent of the population is Christian. Agriculture is the principal industry. Sponge fishing is also important, as well as copper mining.

The mean annual temperature is about 69°; annual rainfall averages about 19 inches.

HONG KONG—Status: Colony.

Capital: Victoria (population 1,000,000).

Governor: Sir Robert Blank.

Foreign trade (1956): exports, HK\$3,210,-000,000; imports, HK\$4,566,000,000. Chief export: textiles.

Agricultural products: rice, sugar cane.

Major industries: shipbuilding, rope making, cement, sugar refining, textiles.

The colony of Hong Kong comprises the island of Hong Kong (32 sq. mi.), Stonecutters' Island, and the Kowloon peninsula and the New Territories on the adjoining mainland. The island of Hong Kong, located at the mouth of the Canton River about 90 miles southeast of Canton, was ceded to Britain in 1841.

Stonecutters' Island and Kowloon were annexed in 1860, and the New Territories, which are mainly agricultural lands, were leased from China in 1898 for 99 years. Hong Kong was attacked by Japanese troops Dec. 7, 1941, and surrendered the following Christmas Day. It remained under the occupation of the Japanese until Sept., 1945.

Possessing an excellent natural harbor

17 miles in extent, the only safe deep-sea anchorage between Shanghai and Indo-China, Hong Kong is the entrepôt for trade throughout southern China and the western Pacific.

The cities of Victoria and Kowloon contain the greater part of the population, which is overwhelmingly Chinese. Besides those Chinese engaged in agriculture or industry, a large population lives in sampans or junks either in Victoria Harbour or neighboring bays, supporting itself by fishing or by laboring on the wharves.

Hong Kong has an agreeable climate, although violent typhoons sometimes descend upon the Colony. The average annual temperature is 72°, ranging from 59° in February to 82° in July. Rainfall is about 85 inches a year.

Federation of Malaya

(Persekutuan Tanah Melayu)

(Member of Commonwealth of Nations)

Area: 50,690 square miles.

Population (est. June 30, 1955): 6,058,317 (1947: Malayan, 49.5%; Chinese, 38.4%; Indian and Pakistani, 10.8%; others, 1.3%).

Density per square mile: 119.5.

Head of State: Sir Abdul Rahman.

Prime Minister: Tengku Abdul Rahman.

Principal cities (census 1947): George Town, 189,068 (seaport); Kuala Lumpur, 175,961 (capital); Ipoh, 80,894 (tin); Malacca, 54,507 (seaport, rubber, copra).

Monetary unit: Malayan dollar.

Languages: English, Malay, Chinese, Tamil.

Religions: Moslems (predominant), Christian, Buddhist.

The Federation of Malaya consists of the states of Johore, Kedah, Kelantan, Negri Sembilan, Pahang, Perak, Perlis, Selangor and Trengganu and the former British settlements (crown colonies) of Malacca and Penang. The native states were brought under British administration by a process of commercial and political exploitation in the late 19th and early 20th centuries. Japanese troops invaded the Malayan States in Dec. 1941, and captured Singapore Feb. 15, 1942. British control was restored upon the Japanese surrender and the Federation was established in 1948. For several years thereafter Communist-led guerrillas caused widespread unrest and a large force of British and other troops had to be stationed in the area.

As the result of agreements reached with the British government in 1956 and 1957, the Federation attained full independence within the Commonwealth on August 31, 1957. Sir Abdul Rahman was elected the first head of state, and Tengku Abdul Rahman (no relation) became prime minister.

Under the 1957 constitution Malaya is a

sovereign constitutional monarchy within the Commonwealth of Nations, recognizing the Queen as head of the Commonwealth. The head of state is elected by the rulers of the states from among themselves for a 5-year term. He is advised by the prime minister and his cabinet. Parliament consists of a senate and house of representatives, but pending elections scheduled for 1959 the present legislative council continues in office. Each state has a constitutional government headed by a hereditary ruler except for Malacca and Penang, the governors of which are appointed by the head of state.

About 65% of the cultivated area is devoted to rubber, of which Malaya is one of the world's largest producers (production 1956: 626,000 long tons). Other export crops include coconuts and coconut oil, tea and pineapples. Production of rice, the principal subsistence crop, falls far short of meeting local requirements.

Recent trade statistics are as follows (in millions of Malayan dollars and including Singapore):

	1954	1955	1956
Exports	2,986	4,156	4,166
Imports	3,139	3,822	4,153

Leading customers in 1956 were Britain (17%), the U. S. (15%) and Japan (8%); leading suppliers, Indonesia (28%), Britain (18%) and Thailand (7%). Leading exports in 1955 were rubber (56%) and tin (10%).

Malaya is rich in minerals. Tin, the most important, occurs throughout the country but production (1956: 62,300 long tons) is concentrated in Perak and Selangor. Other minerals include iron ore (1956: 2,445,000 tons), coal (182,000 tons), bauxite (264,000 tons), tungsten and manganese ore.

Malaya is divided into two unequal parts by a range of mountains about 300 mi. in length, east of which lies the greater part of the country. About 80% is covered by dense tropical forest. The climate is marked by very heavy rainfall, high humidity and uniformly high temperatures.

SINGAPORE—Status: Colony.

Capital: Singapore (population 1947: 441,885).

Commissioner General in Southeast Asia: Sir Robert Scott.

Governor: W. A. C. Goode.

Chief Minister: Lim Yew Hock.

Foreign trade: see Federation of Malaya.

Singapore, founded in 1819 by Sir Stamford Raffles, comprises the island of Singapore and adjacent islets. It became a separate Crown colony of Great Britain on Apr. 1, 1946, when the former colony of the Straits Settlements was dissolved. Penang and Malacca were transferred to the Malayan Union, and the small island of Labuan to North Borneo. The Cocos or Keeling Islands were transferred to Aus-

tralian control in 1951 and Christmas Island in 1957. Singapore was scheduled to be granted full internal self-government in 1958.

Under its 1955 Constitution, Singapore has a Legislative Assembly of 32, 25 of whom are directly elected, and a Council of Ministers responsible to the Assembly. The Governor's reserved powers include foreign affairs, defense and internal security.

The Commissioner General in Southeast Asia is charged with the coordination of administration in the Malayan Federation, Singapore, Sarawak, North Borneo and Brunei.

The basis of Singapore's prosperity is its entrepôt trade. It handles a large part of the export trade of Malaya, from which it is separated only by the narrow Straits of Johore, and also conducts a large volume of trade with Indonesia. Singapore has an excellent natural harbor and is the principal British naval base in the Far East. About 78% of the population is Chinese and 12% Malayan.

The climate of Singapore is hot and humid, with practically no seasonal change; mean average temperature is 80°. The total yearly rainfall is about 95 inches.

India (Republic)

(Member of Commonwealth of Nations)

Area: 1,265,763 square miles.*

Population (est. 1955): 381,690,000* (Hindu, 85%; Moslem, 9.9%; Christian, 2.3%; Sikh, 1.7%; others [Jain, Buddhist, Zoroastrian, Jewish, etc.], 1.1%).

Density per square mile: 301.6.

President: Rajendra Prasad.

Prime Minister: Pandit Jawaharlal Nehru.

Principal cities (census 1951): Bombay, 2,839,270 (seaport; cotton and textiles); Calcutta, 2,548,677 (chief port); Madras, 1,416,056 (seaport); Hyderabad, 1,085,722 (trade center); Delhi, 914,973 (manufacturing); Ahmedabad, 788,333 (manufacturing); Bangalore, 778,977 (manufacturing); Kanpur (Cawnpore), 705,383 (textiles); New Delhi, 276,314 (capital).

Monetary unit: Rupee.

* Including Jammu and Kashmir; status in dispute with Pakistan. † To be used for all official purposes until 1965.

HISTORY. The Republic of India is one of the largest, richest and most populous nations in the world. A sovereign republic within the Commonwealth of Nations, it contains most of pre-1947 India's industrial wealth and natural resources.

The Aryans or Hindus who invaded India between 2400 and 1500 B.C. from the northwest found a land already well civilized. Buddhism was founded in the 6th

century B.C. and spread through northern India. The first exact date in Indian history is 327 B.C., when Alexander the Great invaded India. Meanwhile India continued to be divided into rival states.

In 1526, Mohammedan invaders founded the great Mogul empire, centered on Delhi, which lasted at least in name until 1857. Akbar the Great (1542-1605) strengthened this empire and became the ruler of a greater portion of India than had ever before acknowledged the suzerainty of one man. The long reign of his great-grandson, Aurangzeb (1658-1707) represents both the culmination of Mogul power and the beginning of its decay.

Vasco da Gama, the Portuguese explorer, visited India first in 1498, and for the next hundred years the Portuguese had a virtual monopoly on trade with the subcontinent. Meanwhile, the English founded the East India Company, which set up its first factory at Surat in 1612 and began expanding its influence, fighting against the Indian rulers and the French, Dutch and Portuguese traders simultaneously.

Bombay, taken from the Portuguese, became the seat of English rule in 1687. The defeat of French and Moslem armies by Lord Clive in the decade ending in 1760 laid the foundation of the British Empire in India. From then until 1858, when the administration of India was formally transferred to the British Crown following the great mutiny of native troops in 1857, the East India Company was constantly occupied with the suppression of native uprisings and the extension of British rule.

After World War I, in which the Indian states sent more than 1,000,000 troops to fight beside the Allies, Indian nationalist unrest rose to new heights under the leadership of a little Hindu lawyer, Mohandas K. Gandhi, called Mahatma Gandhi. His tactics, of a politico-religious nature, called for non-violent revolts

against British authority. He soon became the leading spirit of the all-India Congress party, which was the spearhead of Indian revolt against British rule. In 1919 the British gave added responsibility to Indian officials, and by an act passed in 1935 India was given a federal form of government and a measure of self-rule.

During the 1940's the policy of both the wartime coalition government of Britain and later the Labour government envisaged an unpartitioned India as a self-governing federal dominion including both British India and the native states. In 1942, with the Japanese pressing hard on the eastern borders of India, the British war Cabinet decided to send Sir Stafford Cripps to India to try to reach a political settlement with nationalist leaders. The mission failed. Shortly thereafter the Congress party took the position that the British must quit India. In August 1942, fearing mass civil disobedience, the government of India carried out widespread arrests of Congress leaders, including Gandhi.

Gandhi was released in May 1944, and other leaders later. Negotiations for a settlement were resumed and they proved fruitless until the British Labour government sent a mission in 1946 which obtained the agreement of the Congress party and Mohammed Ali Jinnah's Moslem League to a long-term plan for a Constitution based on three separate groups of provinces with a minimal center. However, agreement was not reached on an interim government and the Moslem League later reverted to its position of unconditional partition. Finally, in February 1947, the Labour government announced its determination to transfer power to "responsible Indian hands" by June 1948, even if a Constitution had not been worked out.

With the appointment at the same time of Lord Mountbatten as Governor General, events moved swiftly. By early June 1947,

POLITICAL SUBDIVISIONS OF REPUBLIC OF INDIA, NOVEMBER 1956

States	Area, sq. mi. (approx.)	Population, census 1951*		Area, sq. mi. (approx.)	Population, census 1951*

* Estimated on basis of census where territorial changes in unit have occurred since 1951. † Status in dispute with Pakistan.

agreement was reached on the partitioning of India along religious lines (a plan previously opposed by the predominant Hindus and by Britain) and on the splitting of the provinces of Bengal and the Punjab, which the Moslems had claimed in their entirety.

The Indian Independence Act, passed quickly by both houses of the British Parliament, received royal assent on July 18, 1947, and on Aug. 15 the Indian Empire, united under British rule for almost a century, passed into history.

Under the leadership of Pandit Jawaharlal Nehru, the new nation quickly took its place in world councils as a self-governing state. At home the nation pursued a policy of integration and reorganization designed to place effective power in the hands of the central government, which was faced at the outset by widespread communal rioting climaxed by the assassination of Gandhi, the great Hindu spiritual leader, on Jan. 30, 1948.

As a neutral nation India has played an important part in international affairs in the 1950s.

GOVERNMENT AND DEFENSE. India is now a sovereign republic within the Commonwealth of Nations—a status approved by the other Commonwealth nations at London in April 1949, on the condition that India recognize the King as head of the Commonwealth. Under the Constitution adopted by the Constituent Assembly on Nov. 26, 1949, India has a parliamentary type of government. The bicameral Parliament is composed of the Council of States (chosen by constituent states and the President) and the House of the People (500 members—all except 6 elected directly by popular vote for 5-year terms). The President is elected for a five-year term by an electoral college composed of Parliament and the elected members of the state legislatures. The Cabinet, headed by the Prime Minister, administers the government and is collectively responsible to the House of the People. The constituent states have their own Governors and popularly elected legislatures.

In national elections held in Feb.-Mar. 1957, the seats in the House of the People were filled as follows: Congress party, 365; Communists, 29; Praja Socialists, 19; Independents, 23; others, 52; vacancies, 12.

Native States. Most of the 560-odd native states and subdivisions of pre-1947 India acceded to the new nation, and the central government pursued a vigorous policy of integration. This took three forms: (1) merger into adjacent provinces, (2) conversion into centrally administered areas and (3) grouping into unions of states. Finally, under a controversial reorganization plan effective Nov. 1, 1956,

the unions of states were abolished and merged into adjacent states and India became a union of 14 states and 6 centrally administered areas.

The status of the large princely state of Jammu and Kashmir on the northwest frontier is in dispute with Pakistan. It is 85 per cent Moslem, but its Hindu ruling prince acceded to India, which took over administration following invasion by Moslem troops in late 1947. The U. N. Security Council voted on April 21, 1948, to hold a plebiscite in the area, but it was never held. The part occupied by India was incorporated into India in Jan. 1957.

Defense. The President has supreme command of the armed forces, and the Defense Minister is responsible to Parliament for the army, the navy and the air force, each under its own chief of staff and commander in chief.

The army has three territorial commands—southern, eastern and western—with headquarters at Poona, Ranchi and Delhi, respectively. In Dec. 1956, the navy had 2 cruisers, 6 destroyers, 4 frigates and escort craft and other smaller craft.

SOCIAL AND ECONOMIC CONDITIONS.

Education. Expansion and modernization of all branches of education is under way, with emphasis on technological training. About 83.4% of the population was illiterate in 1951. In 1952-53 there were 222,014 primary schools with 19,523,003 pupils; 24,059 secondary schools, 6,007,516 pupils; 4,970 vocational schools, 1,066,437 pupils; 901 teachers' training colleges, 88,975 pupils. There were 32 universities. English is being replaced as the language of instruction by Indian languages.

Agriculture. More than 200,000,000 acres are under cultivation, but India probably will continue to be a food-deficit area for several years. Rice is the staple food crop; cotton, tea and jute are important cash crops. Production estimates for the crop year 1955-56 included rice, 38,824,000 metric tons (paddy); wheat, 8,919,000 tons; barley, 2,916,000 tons; tea, 300,200 tons; cottonseed, 1,421,000 tons; cotton (lint), 711,000 tons; jute (1956-57), 766,000 tons.

Livestock in 1951 included 42,584,000 buffalo, 130,298,000 other domestic cattle, 39,975,000 sheep, 47,121,000 goats and 4,173,000 pigs.

Manufacturing. The republic retained almost all of the industrial facilities of British India and is among the ten leading industrial nations of the world. Cotton and jute manufacturing are the two largest industrial activities, the former concentrated largely in Bombay and the latter in Calcutta. West Bengal and Bombay are the two most important areas of industrial concentration, with Madras ranking third in importance. In 1956, cotton mills pro-

duced 757,000 metric tons of cotton yarn and 4,850,000 meters of cloth.

Processing of sugar is of great importance; raw sugar production totaled 1,960,000 metric tons in the 1955-56 season plus 2,415,000 tons of *cane gur* for direct consumption. About 90 per cent of the world's supply of jute is processed in the republic. The iron and steel industry is being expanded; in 1956, 1,992,000 metric tons of pig iron and ferroalloys and 1,764,000 tons of raw steel were produced. Production of silk and woolen goods, vegetable oils, coir yarn, paper, matches, salt, cement, leather and shoes, and heavy chemicals is also important.

Communications. Railway mileage totaled 34,340 in 1955, almost all of it under government control. The chief ports are Bombay and Calcutta. According to *Lloyd's Register*, the merchant marine had 215 steamers and motor ships (100 tons and over) aggregating 580,456 gross tons on June 30, 1956. Roads in 1953 totalled 255,000 miles.

Trade. Recent trade data are as follows (in millions of rupees):

	1954	1955	1956*
Exports	5,627	6,077	6,042
Imports	6,175	6,729	8,146

* Provisional figures.

Leading customers in 1956 were Britain (31%), the U. S. (15%) and Japan (5%); leading suppliers, Britain (26%), the U. S. (12%) and western Germany (10%). Leading exports were tea (23%), jute and bagging (19%) and cotton manufactures. Main imports included petroleum and products, machinery, raw cotton and rice.

Finance. The 1957-58 budget provided for ordinary revenue of Rs. 6,360,000,000 and expenditure of Rs. 6,630,000,000. The estimated over-all deficit was Rs. 3,650,000,000. The public debt on March 31, 1956, was Rs. 35,297,700,000, most of which was held internally.

NATURAL FEATURES AND RESOURCES;

CLIMATE. The Indian republic contains a large part of the great Indo-Gangetic plain which extends from the Bay of Bengal on the east to the Afghan frontier and the Arabian Sea on the west. This plain is the richest and most densely settled part of the subcontinent, containing more than half the population. Another distinct natural region is the Deccan, a plateau of 2,000 to 3,000 feet elevation, occupying the southern or peninsular portion of the subcontinent. In several regions, the Deccan is quite mountainous.

Forming a part of the republic are several groups of islands—the Laccadives (14 islands) in the Arabian Sea; the Andamans (204 islands) and the Nicobars (19 islands) in the Bay of Bengal.

India's three great river systems, all rising in the Himalayas, have extensive deltas. The Ganges flows south and then east for 1,540 miles across the northern plain to the Bay of Bengal; part of its delta, which begins 220 miles from the sea, is within the republic. The Indus, starting in Tibet, flows northwest for several hundred miles in Kashmir before turning southwest toward the Arabian Sea; it is important for irrigation in Pakistan. The Brahmaputra, also rising in Tibet, flows eastward first through India and then south into Pakistan and the Bay of Bengal.

Minerals. The republic has rich mineral resources. The most valuable mineral is coal, deposited throughout most of the nation; production in 1956 was approximately 40,055,000 metric tons. Manganese ore (about 1,544,700 tons in 1955) is mined in Madhya Pradesh, and gold in Orissa.

Assam and the Punjab produce oil. Other minerals include iron ore, monazite, diamonds, magnesite, uranium, zircon, silver, graphite, gypsum, tungsten ore and sapphires.

Climate. India's climate varies from temperate in the north to tropical in the south, where temperatures are almost constant the year around. During the November-February cool season, northern India has a climate like that of the Riviera. From March to June steadily rising temperatures reach a peak sometimes as high as 115°, and then comes the southwest monsoon. Rainfall is heavy, averaging 50 to 60 inches in Assam and reaching 500 inches in the Assamese Garo hills.

Pakistan (Republic)

(Member of Commonwealth of Nations)

Area: 364,737 square miles.

Population (est. 1956): 83,603,000 (Moslem, 86%; Hindu, 13%; others, 1%).

Density per square mile: 229.2.

President: Maj. Gen. Iskander Mirza (provisional).

Prime Minister: H. S. Suhrawardy.

Principal cities (census 1951): Karachi, 1,126,417 (capital); Lahore, 849,476 (capital, west Pakistan); Dacca, 276,033 (capital, east Pakistan); Hyderabad, 241,801 (trade and rail center); Rawalpindi, 237,219 (military center).

Monetary unit: Pakistani rupee.

Principal languages: Bengali (official), Urdu (official), English*, Hindi, Punjabi.

* To be used for official purposes until 1976.

HISTORY. Pakistan, a self-governing member of the Commonwealth of Nations and one of the two successor states to British India, is the world's largest and most important Moslem state.

The history of Pakistan prior to 1947 is principally that of India. (See India.) Its creation was to a large extent attributable to Mohammed Ali Jinnah, who envisaged and pressed for the idea of a predomi-

nantly Moslem state carved out of the Moslem areas of British India. Upon the transfer of power on Aug. 15, 1947, Jinnah became the first Governor General; he died on Sept. 11, 1948, and was succeeded by Khwaja Nazimuddin. The latter became Prime Minister upon the assassination of Liaquat Ali Khan, Oct. 16, 1951; he was replaced on Apr. 17, 1953, by Mohammed Ali Chaudry Mohammed Ali succeeded him on Aug. 11, 1955. Pakistan was proclaimed a republic March 23, 1956, and Gov. Gen. Iskander Mirza was elected Provisional President. H. S. Suhrawardy, the first non-Moslem League prime minister, took office Sept. 12, 1956.

GOVERNMENT AND DEFENSE. Under the Constitution adopted Feb. 29, 1956, Pakistan is a republic but continues its membership in the Commonwealth of Nations. The President is elected for 5 years by members of the central and provincial legislatures. The Prime Minister and his Cabinet are named by the President but are collectively responsible to the National Assembly. The Assembly has 300 members, divided equally between East and West Pakistan and directly elected for 5 years.

Provinces. Pakistan consists of two provinces—West and East Pakistan—approximately 1,000 miles apart, separated by the republic of India. The province of West Pakistan consists of Sind, Baluchistan, the former North-West Frontier Province, western Punjab, the princely state of Bahawalpur and a few other small native states. The province of East Pakistan consists of eastern Bengal and the Sylhet district of Assam. Pakistan contains large communal minorities of Hindus and Sikhs. Over half the nation's population is concentrated in East Pakistan, which contains only 15 per cent of the total area.

Defense. In the division of the British Indian Army, Pakistan received 20 regiments, which, with levies and contributions of native princes, made a total army strength of about 200,000. The Pakistan Navy in Dec. 1956 had a force of 1 cruiser, 8 destroyers and several smaller vessels. **SOCIAL AND ECONOMIC CONDITIONS.** Literacy was barely 13.2 per cent, according to the 1951 census. In 1955 there were 42,474 primary schools with 3,200,000 pupils, 5,118 secondary schools with 1,150,000 pupils and 6 universities.

Pakistan, poor in industry and natural resources, is mainly an agricultural nation. Upwards of 45,000,000 acres are under cultivation, almost half of which are irrigated, largely in Sind and west Punjab in western Pakistan. The Punjab contains important wheat-growing areas, and eastern Pakistan is rich in jute, rice and tea. Production estimates for the crop year 1955-56 included wheat, 3,223,000 metric tons; rice, 10,987,000 tons (paddy); maize, 456,000

tons; barley, 125,000 tons; tea, 23,400 tons; cotton (lint), 309,000 tons; (1956-57) jute, 1,000,000 tons. In 1953-54 there were 6,145,000 sheep, 7,067,000 buffalo, 31,060,000 cattle, 470,000 horses and (1952) 477,000 camels.

Pakistan is an exporter of agricultural products and an importer of manufactured commodities. Recent statistics are as follows (in millions of Pakistani rupees):

	1954	1955	1956
Exports	1,187	1,505	1,616
Imports	1,152	1,085	1,673

Chief exports in 1956 were jute (46%), raw cotton (23%), tea, wool and jute manufactures. Leading customers in 1955 were Britain (15%), India (13%), Japan (12%) and the U. S. (8%); leading suppliers, Britain (24%), Japan (14%) and the U. S. (11%). Leading imports were machinery, petroleum and products, iron and steel and products, vehicles and cotton piece goods.

Development of a unified nation is retarded by the fact that communication between east and west Pakistan is possible only through a thousand miles of Indian territory or by a long sea voyage. Railway mileage in 1955 totaled about 7,200.

Western Pakistan has an estimated road mileage of 46,000, about half of which is suitable for motor traffic. Eastern Pakistan has few roads for motor vehicles, but there are about 2,800 miles of waterways navigable by small steamers. On June 30, 1956, the merchant marine had 54 vessels (100 tons and over) aggregating 153,537 gross tons. Karachi, chief port, is the distribution center for north India and has the most important airport on the subcontinent. Chittagong is being developed as a port for eastern Pakistan.

Since partition, Pakistan has made much progress toward industrialization. The most important manufacturing area is in the vicinity of Lahore in the Punjab. Industries include cotton ginning, spinning and weaving, jute manufacturing, sugar refining, cement making, flour milling, railway and engineering workshops and petroleum refining.

The budget for the fiscal year 1956-57 estimated revenue at Rs. 1,310,000,000 and ordinary expenditure at Rs. 1,304,000,000; capital expenditure was placed at Rs. 1,274,000,000, to be financed by loans and foreign aid.

NATURAL FEATURES AND RESOURCES; CLIMATE. Almost all of Sind and the west Punjab are a continuation of north-central plains leading up to rugged mountains in the north and west which traverse Baluchistan and the North-West Frontier Province. Eastern Pakistan is a low-lying, flat country with elevation averaging not more than 600 feet above sea level.

Mineral resources are limited. Production in 1955 included petroleum, 20,700,000 bbl.; coal and lignite, 531,600 metric tons; chromite, 28,900 tons; gypsum, 28,600 tons. Vast quantities of natural gas were discovered at Sui, Baluchistan, in 1952. Production in 1954 was 59,100,000 cu.m.

Western Pakistan has a brisk, cool season between November and March, with average mean temperature of about 60°, and an extremely warm period between April and November, with an average mean of 85°. Rainfall averages about 10 inches a year, of which Sind may receive as little as 6.3 in. Eastern Pakistan is within the range of the summer monsoon, with average annual rainfall of 85 in. The average maximum temperature varies between 75° and 100° April to June; the minimum, between 45° and 60° November to January.

OCEANIA

Australia, Commonwealth of

(Member of Commonwealth of Nations)

Area: 2,974,581 square miles.

Population (est. June 30, 1956): 9,427,558 (excluding full-blooded aborigines, estimated at 50,000).

Density per square mile: 3.2.

Ruler: Queen Elizabeth II.

Governor General: Field Marshal Sir William Slim.

Prime Minister: Robert Gordon Menzies.

Principal cities (est. June 30, 1956): Sydney, 1,935,880 (seaport, wool market); Melbourne, 1,595,300* (seaport, wool, wheat); Brisbane, 527,500 (seaport, industrial center); Adelaide, 514,000 (seaport); Perth, 369,000 (western seaport); Canberra, 32,440 (capital).

Monetary unit: Australian pound (£A).

Language: English.

Religions (census 1947): Anglican, 39.0%; Roman Catholic, 20.7%; Presbyterian, 9.8%; Methodist, 11.5%; other Christians, 7.1%; others, 11.9%.

* Estimate Dec. 31, 1955.

HISTORY. Australia was the last continent to be discovered. The first Europeans to land were the Dutch, who sailed into the Gulf of Carpentaria in March, 1606. Later in the same year, Luis Vas de Torres, a Spaniard, sailed through the strait subsequently named for him, and may have touched at several points on the north coast. In 1642 Abel Tasman (for whom Tasmania was named) sailed from west to east along the southern shore and proved that Australia was not a part of the Antarctic continent. The continent was called New Holland until about 1850.

In 1770 Captain James Cook, after visiting New Zealand, sailed to the east coast of New Holland and landed south of the present city of Sydney. His account of the country led to its being claimed and settled by Great Britain.

The first settlement, made in 1788 at Botany Bay, was founded as a penal station for criminals from England. Transportation of criminals was virtually suspended in 1839, and Australia had comparatively few white settlers until gold was discovered in Victoria in 1851, after which immigrants poured in. By 1860 all the states (then separate colonies) except Western Australia had been granted responsible government.

On January 1, 1901, the six Australian states united to form the Commonwealth of Australia. The Commonwealth supported Great Britain wholeheartedly in both World Wars I and II.

In the general elections held August 21, 1943, Prime Minister John Curtin's Labour government was confirmed in office. Curtin died July 5, 1945, and was succeeded by Joseph B. Chifley, also of the Labour party. The Labour government was defeated by the Liberal-Country-party coalition in general elections held Dec. 10, 1949, and Robert Gordon Menzies, the Liberal leader, became Prime Minister. Elections held in 1951, 1954 and 1955 were again won by the coalition, although by narrower margins.

GOVERNMENT AND DEFENSE. Australia, a self-governing member of the Commonwealth of Nations, is a union of 6 states (New South Wales, Victoria, Queensland, South Australia, Western Australia, Tasmania) and 2 territories (Northern Territory, Australian Capital Territory).

Legislative power is vested in a Parliament of 2 houses—the Senate with 60 members (10 for each state), the House of Representatives with 122 members (plus 2 without vote who represent the territories) elected on a population basis.

Executive power nominally is exercised by the Queen, through a Governor General, who is appointed by her. Actually, however, the Commonwealth is administered by the Prime Minister and the Cabinet members, who are responsible to the House of Representatives and must enjoy its confidence. The House of Representatives continues its sessions for three years from the date of its first meeting, unless sooner dissolved. Senators are chosen for six years, but the Senate may be dissolved in the event of prolonged disagreement with the House. The party alignment in the House after the elections of Dec. 10, 1955, was as follows: Liberal-Country-party coalition 75; Labour 47 (and 2 non-voting members).

Each of the states is headed by a Governor who is appointed by the Queen and is advised by the Prime Minister and his Cabinet; the latter actually administer the government. As in the U. S., the state governments retain the powers not specifically

delegated to the federal government. The Northern Territory is administered by the federal government.

Federal judicial power is vested in a Federal Supreme Court of 7 justices, appointed by the Governor General in Council. Each state has its own judicial system.

Compulsory military service was reintroduced in 1951. The strength of the regular forces in 1955 was: army, 23,098; navy, 13,111; air force, 15,405. In Dec. 1956 the navy had 2 light aircraft carriers, 1 cruiser, 6 destroyers, 17 frigates and escort vessels and numerous smaller craft.

SOCIAL AND ECONOMIC CONDITIONS. Normal primary education is provided free by the states. In 1953 there were 7,595 state primary and secondary schools, with average attendance of 1,149,915, and 1,958 private schools, with average attendance of 366,086. The 10 universities had 23,025 students (including part-time) in 1955-56. Illiteracy is almost unknown among the European population.

Australia is the world's chief producer of wool, and sheep farming is the Commonwealth's most important single industry. About 55 per cent of Australia's total area is suitable (mining excepted) only for pastoral pursuits. On March 31, 1956, there were 139,124,000 sheep, 16,457,000 cattle, 1,166,000 hogs and 770,000 horses. The production of wool in 1955-56 was 629,359 long tons; of butter, 208,590 metric tons; cheese, 38,693 tons; meat, 1,219,055 tons.

The most important crop is wheat; the areas of heaviest production are in South Australia and New South Wales, but production in Western Australia is rapidly increasing.

CROP ACREAGE AND PRODUCTION

	(In thousands)			
	Acres		Long tons	
	1954-55	1955-56	1954-55	1955-56
Wheat	10,673	10,166	4,520	5,235
Oats	2,574	3,354	586	1,412
Barley	1,691	1,894	656	930
Maize	170	167	127	119

Sugar and cotton are grown in Queensland and New South Wales, tobacco in northeast Victoria, and vines chiefly in South Australia and Victoria.

New South Wales is the leading industrial state. Power for industry is derived almost entirely from coal. Steel production was 2,602,130 long tons in 1956; pig iron, 2,073,201 tons; cement, 2,101,268 tons; cotton yarn, 41,009,000 lb.; wool yarn, 46,360,000 lb.

Trade statistics for three years (in millions of Australian pounds) are as follows:

	1953-54	1954-55	1955-56
Exports	828.3	774.2	781.9
Imports	681.5	843.7	821.1

In 1955-56 the leading customers were Britain (33%), Japan (11%), France (9%) and the U. S. (7%); leading suppliers, Britain (43%), the U. S. (12%), western Germany (4%) and Arabian states (4%). Chief exports were wool (43%), meat (8%), wheat (6%) and fruit (4%). Leading imports included petroleum and products, motor vehicles, iron and steel and cotton piece goods.

The principal ports are Sydney, Melbourne and Adelaide. Railway mileage in 1954 totaled 27,000; roads, over 500,000. Civil aviation is under Commonwealth control. The merchant marine had 359 ships of 100 tons and more, aggregating 605,965 gross tons, on June 30, 1956. On Dec. 31, 1956, there were 1,526,744 automobiles and 694,439 commercial vehicles.

Recent public finance data on consolidated account are as follows (in millions of Australian pounds):

	1954-55	1955-56*	1956-57*
Revenue	1,067.4	1,138.3	1,235.1
Expenditure	1,030.5	1,138.3	1,234.9

* Budget estimate.

The public debt (federal and state) on Dec. 31, 1956, was £A4,060,005,000 (federal only: £A2,026,775,000).

NATURAL FEATURES AND RESOURCES; CLIMATE. Australia is approximately equal in area to the United States and is more than three-fourths the size of Europe.

Along the east coast, ranges of mountains run from north to south, reaching their highest point in Mt. Kosciuszko (7,352 ft.). The western half of the continent is occupied by a desert plateau which rises into barren, rolling hills near the west coast. It includes the Great Victoria Desert, to the south, and the Great Sandy Desert to the north. The island of Tasmania (26,215 sq. mi.) lies off the southeastern coast.

Australia possesses considerable mineral resources. The value of mineral output in 1955 was £A165,079,000. Most important is gold (1956 output: 1,030,982 ounces), followed by coal, mined near Sydney, Brisbane and in eastern Tasmania (1956 output: 19,292,860 long tons, plus 10,559,801 tons of brown coal). The Broken Hill mines in New South Wales are one of the most valuable silver-lead-zinc areas in the world. Silver production in 1955 was 14,555,412 oz.; lead, 295,944 long tons; zinc, 256,564 tons. Other important minerals in 1955 included tin (2,017 tons), copper (45,496 tons), iron ore (metal content) (2,304,165 tons) and uranium. Petroleum was discovered in Western Australia in 1953. Production in 1954-55 was 412,954,807 gal.

Forest products include timber (rough sawn), eucalyptus oil, sandalwood oil, tan bark and yacca gum. Sea products include

bêche-de-mer, oysters, pearls, pearl shell, tortoise shell and agar-agar.

Climate. The northern third of the country lies within the torrid zone and the remainder within the south temperate zone. The coolest portion of the mainland (Victoria) is not unlike Spain and south Italy. The average temperature for Australia as a whole is 70°, and the northern coastal areas average 82°. Only in the center of the continent does the annual range of temperature exceed 30°. Large areas of the continent receive less than 10 inches of rain annually. The eastern highlands and Victoria are the best-watered regions.

DEPENDENCIES. Norfolk Island (13 sq. mi.), under Commonwealth administration since 1914, lies about 800 miles east of New South Wales. It enjoys a delightful subtropical climate. Citrus fruits, bananas and coffee are grown.

Nauru (about 8 sq. mi.), an important source of phosphate (exports about 1,000,000 tons annually) was annexed by Germany in 1888 and was placed under joint Australian, New Zealand and British mandate after World War I. In 1947 it was placed under U. N. trusteeship, with the same three administering powers. It lies approximately 2,215 miles northeast of Sydney.

The Ashmore and Cartier Islands (.8 sq. mi.), about 200 mi. off the northeast coast, were placed under Australian authority in 1931, while the Heard and McDonald Islands (158 sq. mi.), about 2,500 mi. southwest of Fremantle, were transferred to Australian control in 1947.

The Australian Antarctic Territory (2,472,000 sq. mi.), comprising all the islands and territories other than Adélie Land situated south of 60° S. lat. and lying between 160° E. long. and 45° E. long., was placed under Australian authority by an order in council effective in 1936.

The Cocos (Keeling) Islands (5 sq. mi.; population 1,000) are a group of 27 small coral islands in the Indian Ocean about 1,160 mi. southwest of Singapore. Used as a link on the Australia-South Africa air route, they were placed under Australian administration in 1951. Christmas Island (62 sq. mi.; population 2,000), about 850 mi. southeast of Singapore, was transferred to Australian control in 1957. It has important phosphate deposits.

PAPUA AND NEW GUINEA, TERRITORY OF—Status: Australian territory and U. N. trust territory.

Administrator: D. M. Cleland.

Capital: Port Moresby (population 13,800).

Chief exports: copra, rubber, gold.

Agricultural products: coconuts, rubber, copra, cacao.

Minerals: gold, silver, platinum.

Effective July 1, 1949, the Australian

territory of Papua and the U. N. trust territory of New Guinea were joined in an administrative union by act of the Australian Parliament. Provision is made for an executive and a legislative council.

Papua, comprising the southeastern part of the island of New Guinea, and the islands of the D'Entrecasteaux, Louisiade and nearby groups, was annexed by Queensland in 1883 and by the British Crown in 1888. It came under the control of the Australian Commonwealth in 1901 and became the Territory of Papua in 1906. Japan invaded Papua in early 1942, but in Dec. 1942, Australian control was restored.

On June 30, 1954, there were 6,313 non-natives in the territory.

The U. N. trust territory of New Guinea, comprising the northern section of eastern New Guinea (93,000 sq. mi.), was mandated in 1920 by the League of Nations to the government of the Commonwealth of Australia, together with the Bismarck Archipelago (New Britain, New Ireland and adjacent islands), the Admiralty Islands with several outlying groups, and the northern Solomon Islands (Bougainville and Buka). It was placed under United Nations trusteeship Dec. 13, 1946, with Australia as the administering power. Japanese troops occupied much of the territory in 1942-45. On June 30, 1954, there were 8,020 Europeans and 3,422 other nonnatives in the territory.

FIJI—Status: Colony.

Governor: Sir Ronald H. Garvey.

Capital: Suva (population 36,967).

Foreign trade (1955): exports, £12,542,064 (38% to Britain); imports, £14,373,951 (37% from Britain). Chief exports: sugar (49%), coconut oil (18%), gold (8%).

Agricultural products (exports 1955): sugar (156,160 long tons), coconut oil (18,586 tons), copra, bananas, pineapples.

Minerals: gold (1955: 73,989 oz.).

Fiji colony consists of an archipelago of from 200 to 250 islands in the South Pacific Ocean about 1,740 miles northeast of Sydney, Australia. The larger islands, including Viti Levu (4,011 sq. mi.) and Vanua Levu (2,137 sq. mi.) are mountainous and of volcanic origin. The archipelago was ceded to Great Britain by the native ruler in 1874.

The population of the archipelago in Dec. 1955 included 9,391 Europeans, 146,842 Fijians and 166,262 Indians. Importation of the latter to work the sugar plantations has led to important social and economic changes. There has been almost no intermarriage between Fijians and Indians, and considerable ill feeling has developed between them.

During World War II, the archipelago was an important air and naval station on

the route from the United States west coast and Hawaii to Australia and New Zealand.

Fiji has a pleasant climate, with the temperature seldom leaving the 60°-90° range; rainfall is heavy in the southeastern three quarters of the archipelago, averaging 10-12 ft. annually, but is almost nil in the northwestern quarter.

TONGA (FRIENDLY ISLANDS)—Status: Protected state.

Ruler: Queen Salote Tupou.

Foreign trade (1956): exports, £T1,624,301; imports, £T1,514,934. Chief export: copra (86%).

This native Polynesian kingdom in the Pacific came under British protection through the Anglo-German agreement of November 14, 1899. The native Queen is advised by a British Agent; the 21-member native Legislative Council is partly elected and partly nominated. The only important products are copra and bananas.

PITCAIRN ISLAND—Status: Colony.

Located in the South Pacific, about midway between Australia and South America, Pitcairn has an area of 2 square miles. It was settled in 1790 by British mutineers from the ship *Bounty*, commanded by Capt. Bligh. Overpopulation forced removal of the settlement to Norfolk Island in 1856, but about 40 soon returned. The island is administered by the Governor of Fiji through an elected council headed by a Chief Magistrate. The population is about 150.

New Zealand

(Member of Commonwealth of Nations)

Area: 103,740 square miles (including outlying islands).

Population (est. Mar. 31, 1957): 2,221,169 (1951: European, 93.3%; Maori and half-caste, 5.9%; others, .8%).

Density per square mile: 21.4.

Ruler: Queen Elizabeth II.

Governor General: Viscount Cobham.

Prime Minister: Keith Jack Holyoake.

Principal cities (census, Apr. 1956): Auckland (greater), 380,412 (seaport and naval base); Christchurch, 193,182 (cereals, stock raising); Wellington, 138,035 (capital); Dunedin City, 99,326 (textiles).

Monetary unit: New Zealand pound (£NZ).

Language: English.

Religions (census 1951): Church of England, 37.5%; Presbyterian, 22.3%; Roman Catholic, 13.6%; Methodist, 8.1%; Baptist, 1.6%; others, 16.9%.

HISTORY. New Zealand, about 1,250 miles east of Australia, consists of two main islands and a number of smaller outlying islands so scattered that they range from the tropical to the antarctic. The islands, which have approximately the area of

Italy, were discovered and named New Zealand in 1642 by Abel Tasman, a Dutch navigator. Captain James Cook explored them in 1769 and after him came many other sailors, sealers, whalers and traders. English missionaries landed in 1814 but made slow progress. On Jan. 22, 1840, to head off a possible French move to claim New Zealand, Britain formally annexed it.

New Zealand was granted self-government in 1852, a full parliamentary system and ministries in 1856 and dominion status on Sept. 26, 1907. Meanwhile from 1861 to 1871 there was fierce intermittent fighting with the native Maoris. Gold was first discovered in 1853.

New Zealand's Labour party came to power in 1935 for the first time, with Michael J. Savage as Prime Minister. The party began a program of liberal economic and social measures and it was again successful in the 1938 elections.

In World War II, New Zealand troops fought in Egypt, Greece, Crete, North Africa, Sicily and Italy, and the islands served as a major base for U. S. troops in the Pacific war.

After 14 years in power, the Labour party was defeated at the general election of Nov. 30, 1949, and the National party took office with Sidney G. Holland as Prime Minister. **GOVERNMENT AND DEFENSE.** New Zealand is a self-governing member of the Commonwealth of Nations. The Queen is represented by a Governor General who is named by her after consultation with the New Zealand government. Legislative power is vested in the eighty-member House of Representatives. The former upper house (Legislative Council) was abolished effective Jan. 1, 1951. The House elected on Nov. 13, 1954, had 45 National party and 35 Labour party members.

Military service was voluntary until July 22, 1940, when compulsory service was instituted. Service outside New Zealand, hitherto voluntary, also became obligatory during World War II. At full mobilization, New Zealand had 157,000 men in the armed forces and 124,000 in the Home Guard. The peacetime force is stabilized at 11,000 men. Naval forces include 2 cruisers, 6 escort destroyers and a number of mine sweepers.

Navy and volunteer army forces were dispatched to Korea in 1950, and compulsory service was readopted. A mutual defense pact with the U. S. was signed Sept. 1, 1951.

SOCIAL AND ECONOMIC CONDITIONS. State education is free and compulsory between the ages of 7 and 15. More than half the Maoris attend the regular public schools; the remainder attend missionary and native village schools. In Dec. 1954 there were 2,230 primary schools with 358,801 students and 294 secondary and

technical schools with 74,716 students. University students numbered 10,304. About 10 per cent of the national budget is expended on education.

Primarily a grazing country, New Zealand is one of the world's largest exporters of mutton, lamb, wool, butter and cheese. In 1955, livestock included 39,117,300 sheep, 5,886,777 cattle and 681,359 hogs. Wool production for 1955-56 was 462,000,000 lbs. (greasy basis). Outside of grass, the chief crop is wheat (2,651,000 bushels in 1955-56). Other crops are oats, barley, potatoes, onions, tobacco, fruits and vegetables. Butter production in 1955-56 was 203,000 metric tons; cheese, 98,000 tons; meat (1955), 630,200 tons.

The chief industries of New Zealand are freezing of meat and making of butter, cheese and condensed milk. Others of major importance are electricity generation, saw milling and clothing manufacture.

Trade statistics for three years (in millions of New Zealand pounds):

	1954	1955	1956*
Exports	244.0	258.6	275.1
Imports	213.1	251.1	275.1

* Provisional.

Leading customers in 1956 were Britain (65%), the U. S. (7%), France (6%) and western Germany (5%); leading suppliers, Britain (54%), Australia (14%), the U. S. (8%) and western Germany (3%). Leading exports were wool (33%), butter (19%) and lamb and mutton (16%).

According to *Lloyd's Register*, the merchant marine had 162 ships (100 tons and over) aggregating 249,786 gross tons on June 30, 1956. Government-owned railway mileage in 1954 was 3,535; highway mileage in 1953 was 12,835.

Recent government financial data on ordinary account are as follows (in millions of New Zealand pounds):

	1954-55	1955-56	1956-57
Revenue	191.2	197.4	206.3
Expenditure	184.4	193.3	203.0

The public debt on March 31, 1957, was £NZ757,119,696 excluding £NZ24,100,200 on which interest payments had been suspended since 1931 by agreement with the British government.

NATURAL FEATURES AND RESOURCES:
CLIMATE. New Zealand's two main components are North Island and South Island, separated by Cook Strait, which varies from sixteen to 190 miles in width. North Island (44,281 sq. mi.) is 515 miles long and volcanic in its south central part. It contains many hot springs and beautiful geysers.

South Island (58,093 sq. mi.) has the Southern Alps along its west coast, with

Mt. Cook (12,349 feet) the highest point in New Zealand.

Principal minerals are coal (1956: 2,565,000 long tons) and gold (1956: 26,063 ounces). Other minerals of importance include tungsten, pumice, silica sand, asbestos, scheelite, iron ore and phosphate. About 30 per cent of the total area is forested; 596,900,000 board feet of lumber were cut in 1956-57.

Flounder, snapper and tarakihi account for 75% of New Zealand's fishery industry. There also are extensive oyster beds.

Numerous rushing streams give New Zealand a great volume of hydroelectric power. About 95 per cent of the population has access to power. Installed capacity (1955) was 994,000 kw.; production (1956), 4,164,000,000 kwh.

The ocean tempers New Zealand's climate, which otherwise might have great variation. The range of mean temperatures is small (at Auckland, 66.3° in January, 51.2° in July; at Wellington, 60.9° in January, 47.2° in July). Rainfall is moderate except on the western slope of the Southern Alps; it averages 45.3 inches annually at Auckland and 47.5 inches at Wellington.

DEPENDENCIES. The Auckland Islands (234 sq. mi.) and Campbell Island (44 sq. mi.) are the principal outlying islands, which have a total area of 324 square miles. They are included within the geographical boundaries of New Zealand as proclaimed in 1847. The Auckland Islands and Campbell are uninhabited. Six hundred miles north of the Auckland Islands are the volcanic Kermadec Islands (13 sq. mi.), annexed in 1887. The Union (or Tokelau) Islands (4 sq. mi.), transferred in 1925 from the Gilbert and Ellice Islands colony, were declared part of New Zealand effective Jan. 1, 1949.

In Polynesia a number of uninhabited islands were brought under New Zealand's control in 1901. Rarotonga and Mangala in the Cook group total 84 square miles. Niue (or Savage Island) (115 sq. mi.) is the largest island outside the Cook group. New Zealand also administers the Ross Dependency (175,000 sq. mi.), an antarctic region claimed by Great Britain in 1923.

WESTERN SAMOA—Status: U. N. trust territory.

High commissioner: G. R. Powles.

Capital: Apia (population 16,000).

Foreign trade (1956): exports, £1,805,696; imports, £1,860,420. Chief exports: cacao, copra, bananas.

Principal products (exports 1956): copra (13,581 long tons), cacao (3,338 tons), bananas, tropical fruits.

The former German Samoan Islands were occupied by New Zealand troops in the opening weeks of World War I and were mandated to New Zealand by the League of Nations in 1920 as the Territory of Western Samoa. They came under U. N.

trusteeship in 1947, with New Zealand continuing as the administering authority. The High Commissioner is assisted by an Executive Council, a Legislative Assembly which has a Samoan majority and a consultative Native Council. There are 9 islands, of which the largest and most populous are Savaii (703 sq. mi.) and Upolu (430 sq. mi.). They are largely mountainous but fertile. The inhabitants are Polynesian Christians. Europeans numbered 450 in 1951.

PACIFIC ISLANDS (British)

High Commissioner in Western Pacific: Sir John Gutch.

Island groups in the Pacific administered by the British High Commissioner in the Western Pacific include (1) Gilbert and Ellice Islands, (2) British Solomon Islands, and (3) New Hebrides Condominium (see French Overseas Territories). The High Commissioner has headquarters at Honiara, Solomon Islands.

GILBERT AND ELLICE ISLANDS—Status: Colony.

The islands in these groups (including the Gilbert group; the Ellice group; Ocean Island [the seat of administration], Fanning, Washington and Christmas Islands; and the Phoenix group) were proclaimed a British protectorate in 1892 and annexed as a colony in 1915. The most important product is high-grade phosphate.

Ownership of Canton and Enderbury islands in the Phoenix group was long in dispute between Great Britain and the United States until 1939, when an agreement for "use in common" was reached by the two governments. Several of the Gilbert islands were occupied by Japanese forces in World War II, and Tarawa was the scene of one of the fiercest battles in U. S. Marine Corps history in Nov. 1943.

SOLOMON ISLANDS—Status: Protectorate.

This British protectorate, lying east of New Guinea, includes the islands of Guadalcanal, Malaita, San Cristobal, New Georgia, Santa Isabel, Choiseul and numerous smaller islands. Bougainville, one of the group, is under Australian mandate. The islands, which came under British protection late in the 19th century, were the scene of several important U. S. naval and military victories during World War II. There are no native states, and administration is carried on by the High Commissioner assisted by a nominated Advisory Council. The most important products are copra and kauri wood. The population is predominantly Melanesian; Europeans numbered 647 in 1954.

Bulgaria (People's Republic)

(Narodna Republika Blgariya)

Area: 42,796 square miles.

Population (census 1956): 7,629,254* (1952: Bulgarian, 91%; Turkish, 6%; Gypsy, 2%; others, 1%).

Density per square mile: 178.3*

Chairman of Presidium: Georgi Damjanov.

Premier: Anton Yugov.

Principal cities (est. 1953): Sofia, 600,000 (capital, railroad center); Plovdiv, 150,000 (commercial center); (census 1946) Varna, 77,792 (Black Sea port); Ruschuk, 53,420 (chief Danube port); Burgas, 43,684 (Black Sea port).

Monetary unit: Lev.

Languages: Bulgarian, Turkish.

Religions: Greek Orthodox, 84.4%; Mohammedan, 13.5%; Jewish, .8%; Roman Catholic, .3%; others, .5%.

* Preliminary figures.

HISTORY. Bulgaria, with a strife-ridden political past, is an agrarian country about the size of Virginia. It sided timidly with Germany in World Wars I and II, hoping to win territory. It lost in both wars.

The first Bulgarians, a tribe of wild horsemen akin to the Huns, crossed the Danube from the north in A.D. 679, and took the province of Moesia from the Roman Empire. They adopted a Slav dialect and Slavic customs and twice conquered most of the Balkan peninsula between 893 and 1280. After the Serbs subjected their kingdom in 1330, the Bulgars gradually fell prey to the Turks, and from 1396 to 1878, Bulgaria was a Turkish province. In 1878, after the Turks had ruthlessly suppressed a Bulgar revolt, Russia forced Turkey to give the country its independence; but the European powers, fearing that Bulgaria might become a Russian dependency, intervened. By the Treaty of Berlin (July, 1878), Bulgaria became autonomous under Turkish sovereignty, with the province of Eastern Rumelia under a Christian Governor.

In 1887, Prince Ferdinand of Saxe-Coburg-Gotha was elected ruler; on Oct. 5, 1908, he declared Bulgaria (and Rume-
lia) an independent kingdom.

In the First Balkan War (1912-13), Bulgaria joined its neighbor states and defeated Turkey; then it bickered with Serbia and Greece over division of Macedonia and was defeated by them in the Second Balkan War, which lasted one month.

Still coveting Macedonia, Bulgaria joined Germany in World War I and lost. On Oct. 3, 1918, Tsar Ferdinand abdicated in favor of his son, who became Tsar Boris III. The Treaty of Neuilly the next year disarmed Bulgaria, reduced it to its 1878 size, and levied a heavy indemnity. Internal disorder, underground intrigue and Agrar-

lan-Communist agitation marked the next fifteen years.

Boris assumed dictatorial powers in 1934-35. When Hitler awarded Bulgaria Southern Dobruja, taken from Rumania in 1940, the weak but land-hungry Boris joined the Nazis in war the next year and occupied parts of Yugoslavia and Greece. Later, with the fortunes of war swinging inexorably against them, the Germans tried to force Boris to send his troops against the Russians. Boris resisted and died under mysterious circumstances on Aug. 28, 1943.

Simeon II, infant son of Boris, became nominal ruler under a regency. Three days after Russia declared war on Bulgaria on Sept. 5, 1944, Bulgaria declared war on Germany. Russian troops streamed in the next day, and under an informal armistice a coalition "Fatherland Front" Cabinet was set up under Kimon Georgiev.

The Fatherland Front regime represented the Communist, Zveno, Agrarian and Social Democratic parties, but real power was in the hands of the Communists, who had active Soviet support and were ably led by Georgi Dimitrov, veteran party leader and former Secretary-General of the Comintern. This government initiated extensive social and economic reforms and suppressed all political groups which failed to subscribe to its policies.

After a plebiscite held Sept. 8, 1946, which resulted in overthrow of the monarchy, and the Oct. 27 elections, the Communists quickly moved to take over the government officially and to reduce the political opposition to complete impotence.

Under the peace treaty which took effect Sept. 15, 1947, after World War II, Bulgaria's boundaries are those which existed Jan. 1, 1941, thus including Southern Dobruja. Bulgaria was to pay reparations in the amount of \$45,000,000 to Greece and \$25,000,000 to Yugoslavia and was to make compensation for damage to Allied property in Bulgaria at the rate of 75% of the cost of replacement.

The United States broke diplomatic relations with Bulgaria on Feb. 21, 1950. Bulgaria was admitted to the U. N. in 1955.

GOVERNMENT AND DEFENSE. The Constitution of 1947, modeled after the U.S.S.R.'s, provides that the unicameral National Assembly is "the supreme organ of the state." The Assembly elects a 15-member Presidium, the President of which is the nominal Chief of State. Governmental administration is carried on by the Premier and his Cabinet, who are responsible to the Assembly. On Feb. 4, 1948, the Communist-dominated Fatherland Front was declared the only official party.

The 1947 treaty of peace fixed the strength of the armed forces as follows: army 55,000; anti-aircraft artillery 1,800;

navy 3,500; and air force 5,200 men and 90 aircraft, none of them bombers. The army was purged of all anti-Communist officers late in 1946 and has been reorganized along Soviet lines. Notwithstanding the treaty provisions, the army had an estimated strength of 200,000 by 1954. A reduction of 18,000 was announced in 1955.

SOCIAL AND ECONOMIC CONDITIONS. Elementary education is compulsory and free between 7 and 15; in 1946, 23% of the total population was illiterate. Schools in 1953 included 6,250 elementary, 250 secondary and 230 vocational training schools, with total enrollment of 1,120,000. There were 20 institutions of higher learning with 31,500 students.

Most of the population is Greek Orthodox. Clergy of all faiths are paid by the state. The national language, Bulgarian, is closely related to Russian; both employ the Cyrillic alphabet.

Bulgaria is still predominantly agrarian, with most of the population engaged in agriculture. Because of the mountainous character of the country, however, less than half of the land is tilled or used for pasture. Collectivization is well-advanced. More than half the cultivated area is devoted to cereals, including wheat, corn, barley, oats and rye. Other crops are tobacco, alfalfa, cotton, flax, potatoes and sugar. There are extensive vineyards in the southern valleys.

Industries are of minor importance and with few exceptions—tobacco leaf, wines and liquors, fertilizers and flour—are confined to domestic markets. Industrialization is one of the chief aims of the Communist regime, however, and all industries of any importance have been nationalized. Both the first (1948-53) and the second (1953-57) five-year plans emphasized the development of heavy industry.

Foreign trade necessarily consists of the exchange of agricultural products for cheap manufactures. Statistics, in billions of leva, are as follows:

	1946	1948	1950
Exports	14.94	34.10	51.62
Imports	17.51	35.20	38.57

Leading customers in 1950 were the U.S.S.R. (45%) and Czechoslovakia, Hungary, Rumania and Poland (31%). Leading suppliers were the U.S.S.R. (67%) and the four above-named satellites (31%). Tobacco is the principal export. Total trade (exports and imports) was estimated at \$410,000,000 in 1954, including \$370,000,000 with countries of the Communist group.

Although the Danube is navigable along the northern border, only a comparatively small percentage of prewar Danube ship tonnage was Bulgarian. Railroad mileage, all nationalized, totaled 2,670 in 1952; highway mileage was about 15,000 in 1955.

NATURAL FEATURES AND RESOURCES; CLIMATE. Two mountain ranges and two great valleys mark Bulgaria's topography. The Balkan belt crosses the center of the country, almost due east-west, rising to a height of 7,800 feet. The Rhodope range breaks off from the Balkans in the west, curves and then straightens out to run nearly parallel along the southern border. Between the two ranges is the valley of the Maritsa, Bulgaria's principal river. Between the Balkan range and the Danube, which forms most of the northern boundary with Rumania, is the Danubian tableland, traversed by several short rivers. Southern Dobruja, a fertile region of 2,900 square miles below the Danube delta, is an area of low hills, fens and sandy steppes.

Soft coal is Bulgaria's principal mineral; production in 1955 was estimated at 9,900,000 metric tons. Other minerals include chromite, gypsum, iron ore, manganese ore, rock salt and silver.

Bulgaria's climate is characterized by cold winters and warm summers approaching the subtropical in the south. Rain and snowfall average twenty to forty inches a year. Temperatures at Sofia average 28° in January and 69° in July.

Burma (Republic)

Area: 261,757 square miles.

Population (est. 1956): 19,856,000 (1941: Burmans, 60%; Shans, 7%; Chins, 2%; Kachins, 1%; Indians, 6%; Chinese, 1%; Indo-Burmans, 1%; others, 22%).

Density per square mile: 75.8.

President: U Win Maung.

Premier: U Nu.

Principal cities (census 1953)*: Rangoon, 711,520 (capital, chief port); Mandalay, 182,367 (river port, upper Burma); Moulmein, 101,720 (seaport); Bassein, 77,382 (rice, river port).

Monetary unit: Kyat.

Languages: Burmese (70%), English.

Religions: Buddhist, 90%; Mohammedan, 3%; Hindu, 3%; Christian, 2%; others, 2%.

* Preliminary figures.

HISTORY. Lying on the eastern side of the Bay of Bengal between India, China and Thailand, the Union of Burma came into existence as an independent state on Jan. 4, 1948. After that time the new republic had to hold its own with difficulty against attacks on the one hand by Communist rebels seeking its overthrow and on the other by Karen insurgents seeking wider territorial autonomy.

In 1612 the British East India Company sent agents to Burma, and in the 17th and 18th centuries the Burmese stoutly resisted the efforts of British, Dutch and Portuguese traders to establish posts on the Bay of Bengal. Actual British rule dated from 1826, and in 1886 British troops forced the

annexation of all Burma to India. On April 1, 1937, the British separated Burma from India and set it up as a Crown colony with its own legislature and a British Governor.

For hundreds of years a battlefield of petty princes, Burma became a key battleground in World War II largely because the 800-mile Burma Road was the Allies' vital supply line to China. The Japanese invaded the country in Dec. 1941, and by May 1942, had occupied most of it, cutting the road. In Aug. 1942, the Japanese set up a puppet government.

After one of the most difficult campaigns of the war, Allied forces liberated most of Burma prior to the Japanese surrender on Aug. 14, 1945. Civil government was resumed in Oct. 1945, but the native nationalist feeling continued strong.

Following a self-determination agreement with Britain (Jan. 27, 1947), the Constituent Assembly, dominated by the leftist Anti-Fascist People's Freedom League (AFPFL), declared Burma a republic on June 17, 1947, and sovereignty was formally transferred on Jan. 4, 1948.

U Nu became Premier July 19, 1947, upon the assassination of U Aung San. He resigned in favor of Ba Swe on June 5, 1956, but resumed the premiership Feb. 28, 1957. U Win Maung was elected to succeed Ba U as president March 11, 1957.

GOVERNMENT. The Constitution adopted by the Constituent Assembly Sept. 24, 1947, provides for a government headed by the President, who is elected by the two houses of Parliament—the Chamber of Deputies and the Chamber of Nationalities—meeting in joint session. The President appoints the Premier on nomination of the Chamber of Deputies; the Cabinet must enjoy the confidence of the Chamber of Deputies. Four frontier areas—the Shan, Kachin and Karen states, and the Chin special division—are constituent parts of the Union but enjoy some autonomy.

According to incomplete returns, in elections for 250 members of the Chamber of Deputies which were held in Apr. 1956, the AFPFL and allies won 169 seats and the Burma United Front, 46.

The Constitution contemplates a form of state socialism, with the operation of all public utilities and the exploitation of all natural resources to come eventually under state control.

SOCIAL AND ECONOMIC CONDITIONS. In 1955 Burma had 8,951 state and recognized primary schools with 1,096,000 pupils and 625 secondary schools with 146,200 students. Because of the many monastic schools, the percentage of wholly illiterate men is small. The University of Rangoon and the university college of Mandalay had a total of 9,000 students in 1955.

The natives in general are Mongolian; the Burmese are the most advanced. Indians, settled in the Irrawaddy delta region, supply most of the coolie labor, while the Chinese constitute the artisan and merchant class. Buddhism, the national religion, profoundly affects the national character; every village in the country has its temple.

Burma is essentially agricultural, with crop growing concentrated in the delta and river valleys. It is a leading producer of rice, the staple food, which occupies two-thirds of the cultivated area. Output in 1956-57 was 6,464,000 metric tons. Crops grown in the dry zone in upper Burma include millet, cotton, peanuts and sesame. Other crops include tobacco, fruit, vegetables and cereals. The number of rubber plantations has increased; exports in 1956 were estimated at 12,700 metric tons. The principal domestic animals are water buffalo, used as a beast of burden in the delta, and small humped oxen, which predominate in other areas.

Leading industries include silk weaving and dyeing, rice husking, oil refining and wood carving.

Recent trade statistics are as follows (in millions of kyats):

	1952-53	1953-54	1954-55
Exports	1,241.0	1,051.0	1,120.1
Imports	885.5	946.7	905.8

Chief exports in 1954-55 were rice and products (75%) and metals and ores (5%). Leading customers were India (34%), Japan (18%) and Britain (9%); leading suppliers were Britain (24%), Japan (23%) and India (17%).

Recent government finance data, on ordinary and capital account, are as follows (in millions of kyats):

	1952-53*	1953-54*	1954-55*
Revenue	954.6	995.7	1,101.0
Expenditure	1,154.7	1,300.8	1,030.9

* Preliminary.

The principal commercial arteries are the Irrawaddy, navigable for 900 miles to Bhamo, and its tributaries. Regular steamer service is maintained to Bhamo. Railways, designed to supplement river transport, totaled 1,800 miles in 1954, all state-owned. There are no rail connections with India or any other country. The length of roads was 25,000 miles in 1954. The Burma Road connects Lashio, a rail terminus in northern Burma, with Kunming, China.

NATURAL FEATURES AND RESOURCES; CLIMATE. Slightly smaller than Texas, Burma is divided into three natural regions: the Arakan Yoma, a long, narrow mountain range forming the barrier between Burma and India; the Shan Plateau in the east, extending southward into

Tenasserim; and the Central Basin running down to the flat, fertile delta of the Irrawaddy in the south. This delta contains a network of inter-communicating canals and nine principal mouths.

Mineral resources are considerable but, in many cases, undeveloped. Production by the Burmah Oil Company, Ltd., in 1939, was 7,396,000 barrels, but it was only 1,725,000 barrels in 1956. Production of tin (in concentrates) was 930 long tons.

Other minerals include lead, silver, zinc, nickel, cobalt, copper, gold, iron ore, molybdenum, coal, uranium (reported), rubies, sapphires and jade.

More than half of Burma is forested. Teak, valuable for naval construction, is the main timber product. Its cutting is strictly controlled.

Burma forms part of the Asiatic monsoon region, but its climate is modified by the topography. There are three seasons: (1) cool and rainless (November through February); (2) hot and rainless (March through May) and (3) rainy (June through October). At Rangoon the annual temperature range is only 10°; at Mandalay, about 20°. Annual rainfall at Rangoon is about 100 in.; at Mandalay, 33.4 in.

Cambodia (Kingdom)

Area: 67,568 square miles.

Population (est. 1955): 4,358,000.

Density per square mile: 64.5.

Ruler: King Norodom Suramarit.

Premier: San Yun.

Principal cities (est. 1955): Phnompenh, 375,000 (capital); (1941) Battambang, 23,567 (rice).

Monetary unit: Riel.

Languages: Cambodian, French, Annamese.

Religion: Buddhism.

HISTORY AND GOVERNMENT. Cambodia is bounded on the south and east by south Vietnam, on the north by Laos and Thailand, on the west by Thailand and on the southwest by the Gulf of Siam. Its recorded history dates back to the beginning of the Christian era when it was known as Fou-Nan. It was absorbed in about 600 A.D. by the Khmers, under whose rule magnificent temples were built at Angkor. The arrival of the French, who were granted a protectorate in 1863, prevented the annihilation of the Khmer empire by the Vietnamese and Siamese. It was occupied by Japan during World War II.

Cambodia became a constitutional monarchy in 1947 and an associated state in the French Union in 1950. The transfer of sovereignty was completed by the Paris agreements of Dec. 29, 1954. In Sept. 1955, the National Assembly voted to withdraw

from the French Union. Cambodia was admitted to the U. N. in 1955.

Under a Constitution promulgated May 6, 1947, the sovereign exercises executive power through the Cabinet headed by the Premier. Legislative power is vested in an elected Assembly.

The present ruler succeeded to the throne March 3, 1955, on the abdication of his son, Norodom Sihanouk.

SOCIAL AND ECONOMIC CONDITIONS. About 90% of the population is Cambodian, 5% Annamese and 4% Chinese. The forested regions of the northeast are inhabited by various primitive peoples.

Agriculture is the basis of the economy. The chief crop is rice, grown principally in the Battambang area (production 1956-57: 1,200,000 metric tons). Second in importance is rubber (1956: 32,000 tons). Other crops include tobacco, kapok, cotton, pepper and maize. Cattle breeding is of major importance. Native industries include silk and cotton weaving, rice milling and the salting of fish obtained from Lake Tonle Sap during the low-water season.

Recent foreign trade data are as follows (in millions of riels):

	1954	1955	1956
Exports	2,188	1,397	1,240
Imports	1,750	1,541	1,980

Leading exports include rice, rubber, animal products, wool and hides and skins. A large part of the trade is with France, the U. S. and Vietnam.

There are about 875 mi. of navigable waterways; small steamers can reach Phnompenh on the Mékong. A railroad runs from Phnompenh to the Thai frontier.

NATURAL FEATURES AND RESOURCES; CLIMATE. Cambodia consists chiefly of a large alluvial plain ringed in by mountains and on the east by the Mékong river. The plain is centered on Lake Tonle Sap, which is a natural storage basin of the Mékong.

Forests cover about 75% of the country, but most are unexploited. Deposits of iron ore, limestone and phosphate exist but also are undeveloped.

The climate is tropical and resembles that of many monsoonal countries, with a dry season from December through May and a wet season from June through November.

Chile (Republic)

(República de Chile)

Area: 286,396 square miles.

Population (est. 1956): 6,941,000.

Density per square mile: 24.2.

President: Carlos Ibáñez del Campo.

Principal cities (census 1952): Santiago, 1,348,283 (capital); Valparaíso, 218,829 (port); Concepción, 119,887 (farming cen-

ter); Viña del Mar, 85,281 (resort center); Antofagasta, 62,272 (nitrates).

Monetary unit: Peso.

Language: Spanish.

Religion: Roman Catholic.

HISTORY. Chile has had a relatively tranquil history amid its neighbors' long record of strife, but it has suffered repeated labor disturbances in recent years.

Europeans first arrived in 1536, when Diego de Almagro, an associate of Pizarro, led an unsuccessful invasion from Peru. Five years later another Spaniard, Pedro de Valdivia, founded Santiago. On Sept. 18, 1810, Chile rebelled against Spanish rule, but independence was not won completely until 1818, when Bernardo O'Higgins and José de San Martín finally crushed the Spanish armies.

Chile, which has never lost a war, fought with Bolivia and Peru in 1879-83 and won the province of Antofagasta, Bolivia's only outlet to the Pacific, as well as extensive areas from Peru. In World War I, Chile was neutral. The overthrow in 1931 of Colonel Carlos Ibáñez, who had seized power in 1927, was followed by a brief chaotic period in which seven Presidents tumbled in and out of office, but Dr. Arturo Alessandri (1932-38) did much to restore Chile's political and economic order.

Pedro Aguirre Cerda, victor in the 1938 elections, initiated an extensive Socialist program before his death on Nov. 25, 1941. Under both external and internal pressure, the latter notably from its strong Communist party, Chile broke relations with the Axis on Jan. 20, 1943; however, it did not declare war on Japan until Feb. 14, 1945.

Juan Antonio Ríos, who succeeded Aguirre, died on June 27, 1946. Following a special election, Gabriel González Videla, candidate of a leftist-center coalition, became President on Nov. 3, 1946. His administration was plagued by recurrent labor disputes, some of which were said to be Communist-inspired. He pursued a strong anti-Communist policy. Carlos Ibáñez was elected to succeed him Sept. 4, 1952.

GOVERNMENT AND DEFENSE. The nation elects a President every six years, a Senate of forty-five members every eight years (one half renewable every four years) and a Chamber of Deputies of 147 members every four years. The President is assisted by a Cabinet responsible to him but subject to impeachment by Congress, which also may override a presidential veto by two-thirds vote. All literate citizens over twenty-one may vote in elections.

Military service is compulsory, beginning at twenty with an initial training period of nine months, after which a civilian is on reserve until the age of forty-five. The navy had in 1956 one old battleship of 28,000 tons, two light cruisers (acquired

from the U. S. in 1951), six destroyers, six frigates, three submarines, two coast defense ships and smaller craft. The air force was expanded during World War II.

SOCIAL AND ECONOMIC CONDITIONS. Education, free and compulsory between 7 and 15, is directed by the central government. In 1943, illiteracy was estimated at 24 per cent, third lowest in Latin America. In 1952 there were 6,851 primary schools and kindergartens with 819,403 pupils and 332 secondary schools with 86,652 pupils. There are five universities.

Chilean agriculture is mostly confined to the temperate central valley, similar to that of California. The available productive land is extremely limited, and most of it must be irrigated. Wheat (1955-56: 1,048,000 metric tons) is the leading crop, followed by potatoes, oats, barley, corn, string beans and fruits. Grapes, next to wheat in acreage, produced an estimated 118,800,000 gallons of wine in 1956. Feudal-type estates, averaging 2,500 acres, predominate. Cattle in 1955 totaled 2,596,000 and sheep 6,540,000. Wool production (1956) was about 10,000 metric tons (clean).

Foreign trade (in millions of U. S. dollars):

	1954	1955	1956
Exports	401	472	542
Imports	343	376	354

In 1955 the leading customers were the U. S. (42%), Britain (17%), Germany (10%) and Argentina (10%); leading suppliers, the U. S. (43%), Germany (11%), Argentina (11%) and Peru (8%). Chief exports were copper (65%) and nitrate of soda (11%). Leading imports were industrial oils, chemicals and paints (17%), machinery (15%) and transport materials (14%).

Except for mineral processing, most manufacturing is of low-priced consumer's goods, particularly textiles. A steel industry was established in 1946; production for the year 1955 amounted to about 309,000 metric tons.

Highway mileage totaled approximately 30,000 in 1954, about a third improved. Rail mileage is 5,400, partly electrified. Civil aviation is highly developed in the interior, and several international lines serve the country. According to *Lloyd's Register*, the merchant marine had 109 vessels (100 tons and over) aggregating 248,505 gross tons on June 30, 1956.

Recent financial data are as follows (in billions of pesos):

	1955*	1956*	1957†
Revenue	137.9	204.9	221.1
Expenditure	156.0	230.7	256.2

* Preliminary. † Budget estimate.

Funded external debt on Dec. 31, 1953, was £17,440,974, \$106,595,500 and 85,832,400

Swiss francs; direct internal debt (Dec. 31, 1955), 29,373,800,000 pesos.

NATURAL FEATURES AND RESOURCES; CLIMATE. A narrow, mountainous land, Chile has one-third of its area covered by the towering ranges of the Andes. In the north is the mineral-rich Atacama Desert, between the coast mountains and the Andes. In the center is a 700-mile-long valley, thickly populated, between the Andes and the coastal plateau. In the south, the Andes border on the ocean.

At the southern tip of Chile's mainland is Punta Arenas, the southernmost city in the world, and beyond that lies the Strait of Magellan and Tierra del Fuego, an island divided between Chile and Argentina. The Juan Fernández Islands, in the South Pacific about 400 miles west of the mainland, and Easter Island, about 2,000 miles west, are Chilean possessions.

The basis of the country's economy is its mineral resources in the northern desert provinces of Atacama, Antofagasta and Tarapacá, where the only natural nitrate in the world is found. Some 60 per cent of the world's iodine is obtained as a by-product of nitrate processing. Chile's world monopoly in nitrate, however, declined in importance with development of the synthetic product.

The world's largest copper reserve, estimated at 134 billion pounds, is in Chile, and also more than 900 million tons of high grade iron ore. The reserve of Chilean coal, noted for quantity rather than quality, exceeds two billion tons.

Production figures are as follows (in thousands of metric tons):

	1954	1955	1956
Coal and lignite	2,267.3	2,308.9	2,277.6
Copper	363.7	433.5	489.6
Gold *	125.0	122.9	94.5
Iron ore	2,199.0	1,536.9
Nitrate of soda	1,574.3	1,540.2	1,159.2
Petroleum†	1,740.0	2,577.0	3,547.0
Silver*	1,489.0	1,714.5	1,821.8

* Thousands of ounces. † Thousands of barrels.

Mercury, manganese ore, cobalt, zinc, tungsten and molybdenum also are produced, and deposits of uranium have been reported.

Forests, estimated to cover 35 million acres in the southern provinces, yield a variety of commercial wood.

In Chile's extreme north the days are hot, the nights warm on the coast and cool in the interior. Central Chile's climate is comparable to that of southern California, and southward in the lake regions the climate is similar to that of the U. S. Pacific Northwest. In the extreme south, fogs and storms keep the mean temperature low.

China (Republic) (Chung-Hua Min-Kuo)

Area: 3,911,209 square miles.*

Population (census 1953): 590,194,715.*

Density per square mile: 150.9.

President, Nationalist China: Generalissimo Chiang Kai-shek.

Premier: O. K. Yul.

Chairman, Communist China: Mao Tse-tung.

Premier: Chou En-lai.

Principal cities (census 1953): Shanghai, 6,204,417 (chief port, industrial and financial center); Peking (Peiping), 2,768,149 (capital, Communist China); Tientsin, 2,693,831 (commercial center); (est. 1952) Chungking, 2,000,000 (river port, trade center); Mukden, 1,790,000 (Manchurian industrial center); Canton, ~1,210,000 (southern commercial center); Wuhan, 1,090,000 (river port); Nanking, 1,020,000 (former Nationalist capital).

Monetary unit: Chinese dollar (yuan).

Language: Chinese.

Religions: Principally Confucian, Buddhist and Taoist.

* Including Province of Formosa (Taiwan), Manchuria and Tibet. Census not taken in Formosa (population estimated at 7,591,298); population total excludes an estimated 11,743,320 Chinese resident abroad. The total population figure is regarded with considerable reserve.

HISTORY. By 2000 B.C., the Chinese were living in the Hwang Ho basin, and they had achieved an advanced stage of civilization by 1200 B.C. The great philosophers, Lao-tse, Confucius, Mo Ti and Mencius lived during the Chou dynasty (about 1122 to 249 B.C.). The warring feudal states were first united under Emperor Ch'in Shih Huang Ti, during whose reign (246-210 B.C.) work was begun on the Great Wall. Under the Han dynasty (206 B.C. to A.D. 220) China prospered and traded with the West.

The T'ang dynasty (618-907) has often been called the golden age of Chinese history. Painting, sculpture and poetry flourished under royal patronage, and printing made its earliest known appearance.

The Mings, last of the native rulers (1368-1644), overthrew the Mongol or Yuan dynasty (1280-1368) established by Kublai Khan, whose dominions extended into eastern Europe. The weakening Mings in turn were overthrown in 1644 by invaders from the north, the Manchus.

The Chinese closely restricted foreign activities, and by the end of the 18th century only Canton (and the Portuguese port of Macao) were open to European merchants. Following the Anglo-Chinese War of 1839-42, however, several treaty ports were opened and Hong Kong was ceded to Britain. Treaties signed after further hostilities (1856-60) weakened Chinese sovereignty and removed foreigners from Chinese jurisdiction. The disastrous Chinese-Japanese War of 1894-95 was followed by a scramble for Chinese leases and concessions by European powers which

resulted in the Boxer Rebellion (1900), suppressed by an international force.

The death of the Empress Dowager Tzu Hsi in 1908 and the accession of the infant Emperor Hsian T'ung (Pu-Yi) were followed by a nation-wide rebellion led by Dr. Sun Yat-sen, who became first President of the Provisional Chinese Republic in 1911. The Manchus abdicated on Feb. 12, 1912. Dr. Sun resigned in favor of Yuan Shih-k'ai, who suppressed the republicans but was forced by a serious rising in 1915-16 to abandon his intention of declaring himself Emperor. Yuan's death in June 1916, was followed by years of civil war between rival militarists and Dr. Sun's republicans. The death in 1925 of Dr. Sun, who had controlled only the Canton area in opposition to the recognized regime, was followed by a revival of the Kuomintang party, which practically deified him. Nationalist forces, led by Gen. Chiang Kai-shek and advised originally by Communist experts, soon occupied most of China, setting up a Kuomintang regime in 1928. Internal strife continued, however, and Chiang broke with the Communists.

An alleged explosion on the South Manchurian Railway on Sept. 18, 1931, brought invasion of Manchuria by Japanese forces, who installed the last Manchu Emperor, Henry Pu-Yi, as nominal ruler of the puppet state of "Manchukuo." Japanese efforts to take China's northern provinces in July 1937, were resisted by Chiang Kai-shek, who meanwhile had succeeded in uniting most of China behind him. Within two years, however, Japan seized most of the ports and railways. The Kuomintang government retreated first to Hankow and then to Chungking, while the Japanese set up a puppet government at Nanking headed by Wang Ching-wei.

When the Japanese surrendered in 1945, China signed a treaty with the Soviet Union providing for Soviet withdrawal from Manchuria, joint Chinese-Soviet control of Manchurian railways for 30 years, a joint Chinese-Soviet naval base at Port Arthur and a free port at Dairen.

The surrender of Japan also touched off a civil war between Nationalist and Communist forces for control of China. By the end of 1949, all of the republic except the island of Formosa was under Communist control. Barricaded on Formosa, the Nationalist regime had little means at its disposal to make any effective counter-attack upon the mainland. The U. S., however, after the outbreak of the Korean war in June 1950, promised naval and air aid to repel any invasion of Formosa.

The Communists meanwhile set up in September 1949, a soviet-type government. After prolonged negotiations, the People's government and the Soviet Union signed a

30-year treaty of friendship and mutual aid on Feb. 14, 1950; its published terms provided for return of the Changchun railroad to China and the eventual return of Port Arthur and Dairen.

The Communist regime subsequently was recognized as the legal government of China by many nations but was unsuccessful in its efforts to secure a place in the U. N. It threw several hundred thousand men into the Korean war of 1950-53 in a futile effort to drive U. N. forces from Korea.

GOVERNMENT AND DEFENSE. Under the Nationalist Constitution of 1947, the highest state organ is the National Assembly, which meets once each three years and is the "sovereign organ of the people." Its members are elected for 6-year terms on the basis of territorial and professional representation. The Assembly elects the President and Vice President of the Republic for 6-year terms. The organs of government include the Executive Yüan (Cabinet), whose members, headed by the Premier, are appointed by the President with the concurrence of the Legislative Yüan and the Legislative Yüan, which exercises legislative functions when the Assembly is not in session and has ultimate control over the cabinet.

The definitive Constitution of the People's republic, adopted by the National People's Congress on Sept. 20, 1954, established the Congress as the highest organ of state power. Its 1,226 members are elected for a 4-year term by local government bodies, the armed forces and Chinese resident abroad. Executive power is vested in the Chairman or President, elected for a 4-year term by the Congress. He appoints the Premier and his Cabinet. The Cabinet, the highest administrative organ, consists of 35 ministers. Effective control is exercised throughout by the central committee of the Chinese Communist party.

Defense. Military service is compulsory in Nationalist China; the initial training period is one or two years. The fighting strength of Chiang's army in 1956 was upwards of 600,000 men. The air force had about 500 planes and the navy, some 100 small vessels.

The chairman is commander-in-chief of the Communist armed forces. In 1956 they numbered about 2,700,000 divided into several field armies. The air force had about 2,000 Soviet-built planes, about half of them jet fighters. The navy had about 30 major vessels, including 13 submarines.

SOCIAL AND ECONOMIC CONDITIONS.

Education. Emphasis on the mainland is upon technical training and inculcation of the Communist ideology. In 1956 there were reported to be about 62,000,000 primary school students, 5,000,000 secondary

school students and 380,000 college and university students.

The mass literacy movement has been accompanied by the replacement of the old classical or "dead" Chinese language with the popular vernacular (Pai-hua) of the Mandarin dialect, employing perhaps 1,000 of the most essential of the many thousands of Chinese ideographs. Plans were approved in 1956 but apparently abandoned later for the introduction of a modified Latin alphabet to replace the ideographs.

Agriculture. In China, nearly 80 per cent of the population depends on the land for livelihood. Subsistence crops are necessarily emphasized, but China is still not self-sufficient in food. Cultivation is intensive, holdings are small, and irrigation is widely practiced. The three most important food crops are rice, wheat and maize; total grain production was officially estimated at 180,000,000 metric tons in 1955.

In northern China, wheat, barley, corn, sorghum, millet and other cereals, and beans and peas predominate, whereas in the south, rice, sugar and indigo are most important. The Yangtze basin, one of the most favored agricultural regions in the world, is China's premier granary. Tea, the chief beverage, is grown mainly in the central uplands, coastal ranges and Szechwan.

Silkworm culture is practiced widely, especially in the lower Yangtze valley. Production of cotton, the major purely industrial crop, totaled 1,317,000 metric tons in 1955. Soybeans are of ever-increasing importance. Other crops include fibers, tobacco, vegetable oils, cane sugar and many medicinal plants and spices.

The urgent need for subsistence crops has confined grazing grounds for sheep and cattle to the dry northwest and to mountain pastures. However, such animals as goats, poultry and especially pigs are raised everywhere. According to unofficial estimates, Communist China had in 1953 28,812,000 cattle, 17,190,000 sheep, 77,376,000 hogs, 34,110,000 goats and 11,885,000 buffalo.

Industry. Industrially, China is still in its infancy. Development has been mainly in the erection of textile mills, silk and flour mills, match factories, tanneries and a few steel and cement mills. The production of consumer's goods far exceeds that of producer's goods, which must still be imported.

The Communist regime is reported to be concentrating upon Manchuria as China's industrial center and to be shifting some industries to the northwest.

The first five-year plan (1953-57) had as its chief aim the collectivization of agriculture and the building of a preliminary foundation for industrialization. The

second five-year plan (1958-62), approved in Sept. 1956, emphasizes industrialization and especially heavy industry. Steel production in 1955 was 2,567,000 metric tons; the revised 1957 target was 5,500,000 tons and the 1962 target 10,500,000-12,000,000 tons.

Trade. According to official reports, the U.S.S.R. and its satellites accounted for 80% of Communist China's total trade in 1956. The 1952 trade total was unofficially estimated at U. S. \$2,000,000,000, and the 1953 total was officially placed at 36% more than that in 1952. Major exports include textiles and products, tung oil and pig bristles.

Communications. Exploitation of many of China's natural resources has been handicapped by the lack of internal communications. There is an extensive system of inland waterways and canals, however, and in central and south China most of the freight is carried by water.

The modern highway system now totals about 90,000 miles. The railway system of 16,500 mi. (Dec. 1955), concentrated in the lower Yangtze basin and in north China and Manchuria, has been rehabilitated and is being extended by the Communists. The main port is Shanghai.

Finance. The 1955 Communist budget estimated revenue at 31,192,520,000 people's yuan (2.37 yuan = U. S. \$1) and expenditure at 29,736,720,000 yuan. The Nationalist government on Formosa continued to depend on U. S. aid to balance its budget.

NATURAL FEATURES AND RESOURCES; CLIMATE. China has about 1¼ times the area of the continental United States. Its coast line is roughly a semi-circle, about 2,150 miles long. The greater part of the country is mountainous, and only in the lower reaches of the Hwang Ho (Yellow) and Yangtze Kiang rivers are there extensive low plains.

The principal mountain ranges are the Tien Shan, to the northwest; the Kunlun chain, which attains a maximum height of 23,890 feet, running south of the Takla Makan and Gobi deserts; and the Trans-Himalaya, connecting the Kunlun with the borders of China and Tibet. Manchuria is largely an undulating plain connected with the north China plain by a narrow lowland corridor. Inner Mongolia contains the relatively fertile southern and eastern portions of the Gobi. The large island of Hainan (13,500 sq. mi.) lies off the southern coast.

Hydrographically, China proper consists of three great river systems. The northern part of the country is drained by the Hwang Ho river, 2,700 miles long and mostly unnavigable. The central part is drained by the Yangtze Kiang, the fifth

longest river in the world (3,100 mi.). The Si Kiang in the south is about 1,650 miles long and navigable for a considerable distance. In addition, the Amur forms part of the northeastern boundary.

Minerals. Mineral resources are considerable. Iron ore, far less plentiful than coal, is mined principally in the lower Yangtze valley and in north China. Tin, mined in Yunnan and southwest Szechwan, has been a major mineral export. Of some rarer minerals, notably antimony and tungsten, China is sometimes the world's leading producer. Lead, zinc, silver, mercury and gold are also mined, and discovery of uranium has been reported. Mineral production in 1955 was estimated as follows: coal, 94,043,000 metric tons; iron ore, about 8,700,000 tons; tin (in ore), 11,500 tons; tungsten concentrates, 18,000 tons; petroleum, 3,500,000 barrels.

Forest and Fisheries. China urgently needs reforestation. Most remaining forests are on inaccessible mountain slopes. Bamboo is cultivated in groves throughout the country south of the Tsinling mountains. Both sea and river fisheries are rich and varied, and fresh or salted fish is a staple food in many districts.

Climate. There are great diversities of climate. North China has the coldest winters in the world for its latitude (23.5° average in January at Peiping). The Yangtze valley is warmer, with winter temperatures more like those of Britain, while the south has warm subtropical winters. Summer temperatures are uniformly hot throughout China (about 79° in July at Peiping and 82° at Hong Kong). South China receives regular rainfall averaging from 40 to 60 inches annually, but in the north rainfall is irregular and not as heavy; droughts and floods are common.

FORMOSA (TAIWAN)—Status: Province (Part of Republic of Nationalist China).

Area: 13,885 square miles.

Population (census 1956, excluding troops and militia): 9,310,158.

Principal cities (est. 1955): Taipei, 677,159 (capital); Kaohsiung, 341,740 (seaport, industrial center); Tainan, 268,243 (agricultural products).

Foreign trade (1956): exports, U. S. \$130,060,000 (35% to Japan); imports, U. S. \$114,360,000* (56% from Japan). Chief exports: sugar (59%), rice (10%), canned pineapple (5%).

Agricultural products (est. 1956, in metric tons): sugar, 795,000; rice (paddy), 1,787,000; tea, 14,500; bananas, pineapples, sweet potatoes.

Manufactures (1956): cement, 573,917 metric tons; cotton cloth, 130,000,000 sq. yd.; paper, 42,000 tons; aluminum, 8,700 tons; steel bars, 67,900 tons.

Minerals: coal (1956: 2,550,000 metric tons), gold, petroleum, silver, sulfur.

* Excludes U. S. aid imports (\$95,374,000) and those with self-provided exchange (\$16,580,000).

Formosa is a large island in the western Pacific, separated from China to the west by the Taiwan straits (narrowest point, 90 mi.). The Pescadores (Bokoto) and other outlying islands (about 78 sq. mi.) became administratively a part of Formosa under Japanese rule. Formosa, ceded to Japan in 1895 after the Chinese-Japanese War, remained Japanese until it was restored to China in 1945, in accordance with the Cairo conference of 1943. It was the only territory under the control of the Nationalist regime after 1949. Under a 1955 mutual defense treaty the U. S. is committed to defend Formosa and the Pescadores. U. S. aid has been a major factor in the Formosan economy since 1949.

Formosa's internal affairs are administered by the provincial government headed by the Governor appointed by the Nationalist government. The provincial assembly is elected by direct popular vote.

Most of the inhabitants are of Chinese stock. There are also about 180,000 aboriginal tribesmen in the interior.

Formosa is essentially an agricultural country with the greater part of the population dependent on farming. It is self-sufficient in most basic foodstuffs and produces surpluses of a number of others, notably rice and sugar. Farms are generally small (average 3 ac.). Cattle and water buffalo are the chief livestock.

Food processing is the island's major industry; it engaged over 6,000 plants in 1955. The textile industry is expanding, and industrial potential was increased by the first four-year program (1953-56).

The island is one of the world's chief sources of camphor, and government monopolies of camphor, salt, opium and tobacco have been established. Forest resources are enormous. Railway mileage totaled (1956) 2,800 and roads (1953) 16,380.

Formosa is divided by a central mountain range running from north to south, which rises sharply on the east coast and declines gradually to the broad western plain, where cultivation is concentrated.

The climate is tropical, with temperatures above 60° (except in mountain areas) every month except January.

TIBET—Status: Nominally independent; under Chinese Communist control.

Area: 469,413 square miles.

Population (census 1953): 1,273,969.

Capital: Lhasa (about 20,000).

Ruler: The 14th Dalai Lama (Lingerh Pamo Töntrup).

Monetary unit: Sang.

Exports: wool, live animals, salt, hides, borax, tea, musk.

Agricultural products: barley, fruits, pulse, vegetables.

Minerals: borax, salt, coal, gold.

Tibet, north and northeast of the Himalayas, is the highest country in the world, averaging 16,000 feet in elevation and having many peaks ranging up to more than 25,000 feet. Chinese suzerainty over Tibet was established in the 18th century. The area was invaded by a British expeditionary force in 1904, but the Anglo-Russian Convention of 1907 recognized China's influence and stipulated that neither Russia nor Britain should interfere in Tibet's affairs.

Chinese Communist troops invaded the area in October, 1950. An agreement signed with Communist China in May, 1951, recognized the Dalai Lama as spiritual and temporal ruler but made Tibet virtually a Chinese province.

The religion and predominant factor in Tibet's social system is Lamaism, a late form of Buddhism modified by animism and primitive magic. Education is in the control of the many monasteries, some of which have more than 1,000 monks. A large number of the population are lamas, mostly celibates. Both polyandry and polygyny are practiced.

The climate is extremely variable. Total yearly precipitation in most of the country is only about 8 inches.

Colombia (Republic) (República de Colombia)

Area: 439,519 square miles.

Population (est. 1956): 12,939,000 (mestizo 68%; white, 20%; Indian, 7%; Negro, 5%).

Density per square mile: 29.4.

President: Maj. Gen. Gabriel Paris (chairman of ruling junta).

Principal cities (est. 1954): Bogotá, 765,360 (capital); Medellín, 431,380 (mining); Cali, 365,800 (coffee, mining); Barranquilla, 324,700 (seaport); Cartagena, 142,800 (seaport); Bucaramanga, 136,170 (industrial center).

Monetary unit: Peso.

Language: Spanish.

Religion: Roman Catholic.

HISTORY. Colombia, nearly nine times the size of New York state, is the only country in South America with frontage on both the Pacific and the Caribbean. Its northern coast was one of the first parts of the Americas to be visited by Spanish explorers. Darien, the first permanent European settlement on the American mainland, was founded in 1510, Santa Marta in 1525, and Bogotá in 1538.

New Granada, as Colombia was called until 1861, was comparatively neglected during the Spanish colonial era. After winning independence from Spain during a fourteen-year struggle ending in 1824, the country established a republic in 1831, including the area that now is Panamá. In-

termittent civil war plagued Colombia until 1903, when Panamá, with United States backing, seceded from the republic.

The century-old boundary dispute with Peru over Leticia almost led to war in 1931, but a settlement was arranged through the League of Nations in 1934-35.

Bogotá was swept by a destructive but unsuccessful revolt on April 9, 1948, following the assassination of Jorge Eliécer Gaitán, extremist Liberal leader. The 1949 presidential election, held on Nov. 27 and boycotted by the Liberals, was won by Conservative Laureano Gómez. Gómez returned to office on June 13, 1953, after being on leave of absence since Oct. 1951, but was immediately ousted in a *coup d'état* led by Lt. Gen. Gustavo Rojas Pinilla, who became President. Rojas was ousted by military leaders May 10, 1957, after trying to continue himself in office for a second term.

GOVERNMENT AND DEFENSE. Colombia's President, who appoints his own Cabinet, is elected every four years and is not eligible to succeed himself immediately. The Senate—upper house of Congress—has 63 members elected for four years by direct vote. The House of Representatives of 123 members is directly elected for two years. Congress was superseded temporarily by a national constituent assembly in 1954. All citizens over 21 are entitled to vote.

A term of military service is compulsory for men between twenty-one and thirty. The strength of the peacetime army averages about 13,000-14,000. With 2,500 personnel, the navy has two modern destroyers, one sea-going gunboat, three patrol craft, three frigates, six river gunboats and several launches. An infantry battalion and two frigates served in Korea.

SOCIAL AND ECONOMIC CONDITIONS. Primary education is free and technically compulsory. Illiteracy (7 years and over) was officially placed at 37% in 1951. By law, 10 per cent of the national budget goes for education. In 1954, 14,744 primary schools reported enrollment of 1,125,350 pupils, 620 secondary schools 69,947 and 218 commercial schools 17,379. In addition to the national University, founded at Bogotá in 1572, there were 21 other universities and 22 institutes and schools of higher learning with a total of 11,996 students.

Because of the former isolation of the interior, the language and manners in Bogotá are more purely Castilian than anywhere else in South America.

In recent years, notably since adoption of a new labor code (1944), the working classes have made important gains, including minimum wages, vacations and holidays, accident and sickness benefits, and the protected right of union organization.

Most of the people live by farming and cattle herding, but only a small part of the land is cultivated, and that by primitive means. Colombia's coffee, the nation's principal crop, is a mild variety that does not compete with Brazilian types. Production in 1956-57 was about 7,200,000 bags of 132 pounds each. Other crops include bananas, coconuts, tobacco, sugar cane, corn, cotton, cacao, beans, rice, tropical fruits and, in the temperate regions on plateaus and in mountain valleys, cereals and potatoes. Cattle numbered 12,100,000 in Dec. 1955, according to U. S. government estimates.

The leading manufacturing industries are foodstuff processing, textiles and beverages. A new steel plant went into operation late in 1954; production in 1955 was 92,939 metric tons.

Recent trade statistics, in millions of pesos, are as follows:

	1954	1955	1956
Exports	1,642.8	1,459.7	1,343.9
Imports	1,679.4	1,673.2	1,638.8

Leading exports in 1956 were coffee (77%), petroleum (13%) and bananas (5%). Leading customers were the U. S. (71%), Germany (7%), Netherlands Antilles (5%) and Sweden (3%); leading suppliers, the U. S. (62%), Germany (12%), Britain (3%) and France (3%).

Difficult terrain makes Colombia's rail and road building costly. Rail mileage was put at 1,854 (main-line track) in 1954; and improved highway mileage at 15,365. Air transit is well advanced, and there are 4,620 miles of navigable waterways.

Colombia's 1957 budget provided for expenditures of 1,227,368,125 pesos. On Dec. 31, 1956, the internal debt was 494,685,000 pesos and the foreign debt (excluding interest) the equivalent of 249,777,000 pesos.

NATURAL FEATURES AND RESOURCES; CLIMATE. Through the western half of the country, three Andean ranges run north and south, merging into one at the Ecuadorean border. The eastern half is a low, jungle-covered plain, drained by spurs of the Amazon and Orinoco, inhabited mostly by uncivilized Indians. The fertile plateau and valley of the eastern range is the most densely populated part of the country.

Rich in minerals, Colombia has the third largest oil industry in Latin America (70 per cent controlled by U. S. interests). Production in 1956 was 44,130,000 barrels. The country is also rich in platinum and has world-famous emerald mines at Muzo in the eastern Andes. Mineral production includes gold (1956: 438,350 troy oz.), silver (110,729 oz.) and crude platinum (exports 1956: 26,215 oz.).

Colombian forests, covering a large part

of the country from the western Andes to the eastern plain, are a great but little exploited source of wealth. Products include vanilla, quinine, ipecac, sarsaparilla, gums and balsams, tanning agents, dyewoods, hardwoods and rubber.

Alligators along many of the large rivers are hunted for hides. The rivers and lakes abound with fish and turtles, a source of commercial tortoise shell.

Although Colombia lies almost entirely in the north torrid zone, its climate is tempered by prevailing winds and high altitudes in the western, mountainous area. High temperatures and excessive moisture prevail in the lower areas, along the coast and in the larger river valleys. At Bogotá, the mean temperature stays in the 50's every month of the year; annual rainfall there is 42 inches.

Costa Rica (Republic) (República de Costa Rica)

Area: 19,695 square miles.

Population (est. Dec. 31, 1956): 1,014,170 (1950: white and mestizo, 97.6%; Negro, 1.9%; Indian, .4%; Asiatic, .1%).

Density per square mile: 51.5.

President: José Figueres Ferrer.

Principal city (est. Dec. 31, 1956): San José, 99,747 (capital and only large city).

Monetary unit: Colón.

Language: Spanish.

Religion: Roman Catholic (state).

HISTORY AND GOVERNMENT. Costa Rica was discovered and probably named by Columbus in 1502. A Spanish province as early as 1530, it proclaimed its independence in 1821, and was a member of the Central American Union from 1823-38. Aside from boundary disputes with Panamá and Nicaragua, Costa Rica's modern history was comparatively tranquil until the spring of 1948, when a brief civil war followed congressional annulment of presidential elections in which Otilio Ulate Blanco defeated the Government candidate. Leftist-supported government forces surrendered and an 11-man junta took over. A Constituent Assembly was elected on Dec. 8, 1948. The Assembly met on Jan. 16, 1949, confirmed Ulate as President-elect, and, after drafting a new Constitution, dissolved on Nov. 8, on which date Ulate took office. José Figueres Ferrer was elected to succeed him in July 1953.

Under the 1949 Constitution the President and one-house Congress of 45 members are popularly elected for terms of four years.

The army was abolished in 1950. There is a police force of 1,000 and 700 coast guardsmen.

SOCIAL AND ECONOMIC CONDITIONS. Costa Rica's illiteracy rate (estimated at

21.2% in 1950) is the lowest in Central America, with elementary education free and compulsory. In 1954 there were 1,293 primary schools (137,941 pupils) and 39 secondary and teachers' schools (12,708 pupils). The National University is at San José. The English language is taught in all of the primary schools.

Coffee, bananas, abacá fiber and cacao are the basic products of Costa Rican agriculture, which is characterized by the prevalence of small land holdings. Cotton, sugar cane, tobacco, corn, beans, rice and potatoes are subsidiary crops. Cattle are raised mainly for dairying.

Coffee production totaled 600,000 bags of 132 lb. each in 1956-57 (preliminary).

Manufacturing is virtually limited to locally consumed products. Chief among those products are furniture, fine woodwork and tobacco.

Foreign trade data (in millions of U. S. dollars) are as follows:

	1954	1955	1956
Exports	84.70*	80.90*	63.57
Imports	80.65	87.47	91.23

* Banana valuation adjusted.

Leading customers in 1956 were the U. S. (48%), Germany (32%) and Canada (5%); leading suppliers, the U. S. (54%), Germany (9%) and Britain (6%). Leading exports were coffee (53%), bananas (34%) and cacao (5%); imports included textiles, machinery, vehicles and petroleum products.

In 1955 the rail system totaled approximately 800 miles; highways, 1,554 miles, of which 497 miles were paved. According to *Lloyd's Register*, the merchant marine had 152 vessels (100 tons and over) aggregating 507,706 gross tons on June 30, 1956.

Recent public finance data are as follows (in millions of colones):

	1955	1956	1957*
Revenue	261.8	257.2	275.2
Expenditure	248.6	256.1	275.2

* Budget estimate.

The public debt (Dec. 31, 1956) was 350,564,204 colones, of which 130,650,313 colones represented the external debt.

NATURAL FEATURES AND RESOURCES; CLIMATE. Most of Costa Rica is tableland, from 3,000 to 6,000 feet above sea level, with sharp slopes to the Caribbean and Pacific. Cocos Island (10 sq. mi.) about 300 miles off the Pacific Coast, is under Costa Rican sovereignty; although it is mostly tropical jungle, it is of potential strategic importance in the defenses of the Panama Canal.

Gold is the most valuable mineral, although silver, manganese, mercury and sulfur also exist. Oil was discovered in 1956.

oslovakia's Teschen area, and Hungary had taken areas in Slovakia and Ruthenia. In March 1939, the Nazis set up Slovakia as a puppet state, declared Bohemia and Moravia to be Nazi protectorates, and gave Hungary the remainder of Ruthenia. Both Slovakia and Bohemia-Moravia were occupied by German troops. Beneš organized a government-in-exile in London in 1940.

Soon after the government returned to Czechoslovakia in April 1945, Ruthenia, the easternmost province, was ceded to Russia. On July 3, 1946, Communist Klement Gottwald formed a six-party coalition Cabinet. Amid increasing pressure from Moscow, Gottwald's Cabinet remained in office until a bloodless *coup d'état* of Feb. 23-25, 1948, when the Communists seized complete control. President Beneš resigned June 7 following parliamentary elections in which the Communists and their allies were unopposed. Parliament elected Gottwald to the presidency, and Communist Antonín Zápotocký succeeded to the premiership. On the death of Gottwald Mar. 14, 1953, Zápotocký became President and Viliam Široký was named Premier.

GOVERNMENT AND DEFENSE. Czechoslovakia's Soviet-type Constitution, promulgated on June 3, 1948, makes the 300-member unicameral Parliament the supreme organ of the state with control over courts and civil service. The government is headed by the President, elected by Parliament for a seven-year term, and the Prime Minister and his Cabinet who are appointed by the President but are responsible to Parliament. The Constitution contains nominal guarantees of civil liberties and provides that the state shall conduct all economic activity in the public interest on the basis of a single economic plan. Provision is made for limited Slovak autonomy under an elected council of 100 members.

The army, based on a cadre of Czech units which fought with the Red Army during World War II, has been trained and equipped by the Soviet Union with organization and armament on its pattern. Estimated strength is over 250,000, including police.

SOCIAL AND ECONOMIC CONDITIONS. Illiteracy is low in Bohemia, higher in Slovakia, and probably less than 2% for the whole country. In 1953 there were 9,045 elementary schools with 1,030,000 pupils, 2,745 higher grade schools with 473,000 and 304 secondary schools with 80,300. Vocational pupils numbered 113,000. The 17 institutions of higher learning had 42,000 students.

Nationalization of all enterprises with more than 50 employees as well as concerns of any size operating in key industries was completed between 1945 and 1948. Distribution of large estates had

already been accomplished by the 1919 Land Reform Law. Total collectivization of agriculture was the professed aim of the Communist regime.

Sugar beets, wheat, corn and high-grade barley and hops for beer brewing are cultivated in the low-lying areas. In more elevated regions, the cultivation of potatoes, rye and oats predominates. Higher lands are also used for growing fodder crops or for grazing. In Dec. 1955 there were 4,107,000 cattle, 1,000,000 sheep and (Dec. 1954) 4,771,000 hogs.

The highly developed position of Czech industry is important in foreign trade, since output far exceeds domestic needs. Abundance of coal and presence of iron ore give the country a big metallurgical industry. Steel production was unofficially estimated at 4,900,000 metric tons in 1955; pig iron output, at about 2,976,000 tons. The Skoda steel works at Pilsen are among the largest in Europe.

Other industries are glass, porcelain and pottery making, while large forest areas provide raw material for the timber, paper and cellulose industries. Also highly developed are the textile industries, including cotton, wool, flax and jute production, and the shoe industry. The famous Bat'a shoe factories are at Zlín.

Foreign trade is a state monopoly managed by government corporations. In 1954 total trade (exports and imports) was estimated by the U. N. Commission for Europe at \$1,940,000,000, including \$1,450,000,000 with countries of the Communist group. Leading exports were iron and steel manufactures, machinery, textiles, glass and vehicles.

Czech railroads, totaling 8,200 miles in 1948, form a direct connection between the systems of eastern and western Europe, making the country an important communications center. Highway mileage totaled 43,718 in 1955. Internal waterways and rivers connect Czechoslovakia with the Black Sea and the North Sea.

National budget estimates in recent years (in billions of koruny):

	1954	1955	1956
Revenue	87.8	86.2	90.3
Expenditure	87.6	86.0	89.0

NATURAL FEATURES AND RESOURCES. **CLIMATE.** Czechoslovakia lies athwart the great central European watershed between the Baltic, Black and North Seas. Mountains form several of its boundaries. Many of the valleys are made fertile by the Danube, Elbe and Vltava (Moldau) rivers and their tributaries.

Most important of Czechoslovakia's varied minerals are pit coal and lignite, with the principal coal fields in the Ostrava-Karvinná area, connected with the Polish

fields of Upper Silesia. Production for the year 1955 was estimated at 22,100,000 metric tons of hard coal and 40,700,000 tons of lignite.

Production of iron ore in 1955 was about 2,500,000 tons; much ore is imported to meet the demands of Czechoslovakia's flourishing iron and steel industry. Excellent porcelain raw materials, particularly kaolin, are obtained in western Bohemia and southern Moravia. Other minerals are antimony, gold, magnesite, oil, uranium, silver and zinc.

Czechoslovakia is one-third wooded and is one of the richest forest lands in Europe, with a high production of lumber.

At Prague, in Bohemia, the average annual temperature is 43.2° (29.6° in January; 66.2° in July) and the average annual rainfall is 19.6 inches. The corresponding figures for Presov, in eastern Slovakia, are 46.8° and 25.6 inches.

Denmark (Kingdom)

(Kongeriget Danmark)

Area: 16,577 square miles.

Population (est. Jan. 1, 1957): 4,475,000 (almost entirely Danish).

Density per square mile: 270.0.

Sovereign: King Frederick IX.

Prime Minister: H. C. Hansen.

Principal cities (est. 1957): Copenhagen, including suburbs, 950,700 (capital); Aarhus, 118,700 (shipbuilding); Odense, 107,400 (meat, dairy products); Alborg, 84,200 (seaport).

Monetary unit: Krone.

Language: Danish.

Religion: Evangelical Lutheran (state).

HISTORY. A tiny nation, Denmark once was powerful and feared. After conversion of the Danes to Christianity in the 9th and 10th centuries, Canute the Great, King of Denmark, conquered England in 1015. In the 12th and 13th centuries, under Kings Valdemar I and II, Denmark reached the zenith of its power. By the terms of the Union of Kalmar in 1397, the nation was united with Norway and Sweden. Sweden left the Union in 1520, but Denmark and Norway remained united until 1814. In the Napoleonic Wars Denmark picked the wrong side; when Napoleon was defeated, Norway was given to Sweden and Helgoland to Britain in 1814. Denmark lost again in 1864 when, after a war with Austria and Prussia, it lost Holstein, Schleswig and Lauenburg to Prussia.

The country, which had become a liberal constitutional monarchy in 1849, stayed neutral in World War I, after which a plebiscite returned to it a part of North Schleswig. In 1917 Denmark sold the Virgin Islands to the United States for the price of \$25,000,000.

On May 31, 1939, eager for peace, Den-

mark signed a 10-year nonaggression pact with Germany. Less than a year later, on April 9, 1940, Germany invaded neutral Denmark. The British countered by occupying the Faeroe Islands and Iceland. Iceland declared its complete independence from Denmark in 1944, thus breaking a union which had existed since 1380.

To save the country from destruction, King Christian X accepted the German occupation without armed resistance, and the Danish policy became one of passive resistance against Hitler's attempts to form a "model protectorate." During 1944-45, the Danish underground became increasingly active and effective.

Following the German surrender in 1945, the Danes quickly took over their government again with Social Democrat Vilhelm Buhl as Prime Minister. Buhl resigned when his party lost ground in the national elections of Oct. 30, 1945, and Knud Kristensen formed a new all-Liberal Cabinet in Nov. 1945. He lost the confidence of the Folketing in Oct. 1947, and, after elections in which the Social Democrats increased their plurality, Hans Hedtoft was named Prime Minister on Nov. 11, 1947. His party won the largest block of seats in the September 1950 elections but was forced to yield the next month to a Liberal-Conservative Cabinet headed by Erik Eriksen, a Liberal. Hedtoft returned to office in Sept. 1953 with an all-Social Democrat Cabinet. Upon his death in Jan. 1955, H. C. Hansen became Prime Minister.

RULER. Frederick IX, of the house of Schleswig-Holstein-Sonderburg-Glücksburg, born March 11, 1899, became King April 20, 1947. In 1935 he married Princess Ingrid of Sweden, by whom he has three daughters: Margrethe (heirless apparent, born April 16, 1940), Benedikte (born 1944), Anne-Marie (b. 1946). The King's uncle is King Haakon VII of Norway.

GOVERNMENT AND DEFENSE. Under the Constitution of 1953, Denmark is a hereditary monarchy. Legislative power rests jointly with the King and the unicameral Folketing of 179 popularly-elected members, two of whom represent the Faeroes and two Greenland. The Folketing is elected for four years but is subject to earlier dissolution by the King. The Constitution authorizes the transfer of some sovereign powers to international organizations under certain circumstances. The Cabinet, presided over by the King, who designates the Prime Minister, is the highest executive power.

The lineup in the Folketing (elections of Sept. 22, 1953), was Social Democrat 74, Agrarian Liberal 42, Conservative 30, Radical Liberal 14, Communist 8, others 11.

Military service is compulsory. The army, numbering about 12,000, has been re-

The mountain slopes yield such forest products as balsa, cedar, dyewood, mahogany and rosewood.

The weather is cool and refreshing in the Costa Rican highlands, with average temperatures of 68°, and San José is increasing in importance as a tourist resort. Along the coasts, the mean annual temperature is about 82°. The rainy season is usually from April or May to about December; rainfall amounts to 70 inches yearly on the Pacific coast and more than 130 on the Atlantic or Caribbean.

Cuba (Republic)

(República de Cuba)

Area: 44,217 square miles.

Population (census 1953): 5,829,029 (white, 72.8%; mulatto, 14.5%; Negro, 12.4%; Asiatic, .3%).

Density per square mile: 131.8.

President: Fulgencio Batista y Zaldívar.

Principal cities (census 1953): Havana, 785,455 (capital, industrial center); Mariño, 219,278 (Havana suburb); Santiago de Cuba, 163,237 (seaport, mining); Camagüey, 110,388 (cattle, sugar); Santa Clara, 77,398 (tobacco).

Monetary unit: Peso.

Language: Spanish.

Religion: Roman Catholic.

HISTORY. The history of Cuba, largest of the many Caribbean islands, began for white men with discovery by Columbus on his first voyage in 1492. It was a Spanish colony until 1898, except for brief British occupancy in 1762-63. Open war raged between Cuban rebels and Spanish troops from 1867 to 1878. Fighting broke out again in 1895, and when the United States threatened to intervene, Spain felt its national dignity had been wounded. Strained relations between Spain and the U. S. led to war when the U. S. battleship *Maine* was blown up in Havana harbor in Feb. 1898. At the end of the brief Spanish-American War, Spain gave up Cuba.

Until creation of the Cuban republic in 1902, the island was ruled by United States military authorities. For the first thirty-two years of the republic's life, the United States held the right to intervene in any crisis—a right which was invoked during insurrections which occurred in 1906, 1912 and 1917.

Corruption bedeviled Cuba after World War I, particularly during the eight-year presidency of Gerardo Machado, who was ousted in a 1933 revolution. Five different Presidents tried to rule in the next few months; out of this political whirligig came the dictatorship of Fulgencio Batista, who climbed almost overnight from army sergeant to army commander in chief. In 1940 Batista legalized his reign by being elected to a four-year presidential term.

He was succeeded in 1944 by Dr. Ramón Grau San Martín. Carlos Prío Socarrás won the June 1948 elections and took office Oct. 10 for a 4-year term. Prío was ousted March 10, 1952, however, by Batista, the former dictator, who became provisional President on April 4. He was elected for a 4-year term Nov. 1, 1954.

GOVERNMENT. Cuba's President is elected for a 4-year term by direct popular vote, in which women take part. The Cabinet, though named by the President, is responsible to the Congress—a 54-member Senate and a 130-member House, both elected for four years. Much Cuban lawmaking is done through presidential decree, reviewable by the Supreme Court. Cuban politics are dominated by personalities, with the result that there are frequent shifts in political grouping.

Compulsory military service was established in 1942. The army numbers about 15,000; the navy, 5,000, manning some twenty small coastal craft. The air force has 50 combat planes, two U. S. air bases and one naval base built in World War II at a cost of more than \$30,000,000 were turned over to Cuba in 1946. However, the United States retained its long-held naval base at Guantánamo.

SOCIAL AND ECONOMIC CONDITIONS. Education is free and compulsory from 7 to 14. In 1952-53 public primary schools had 634,924 pupils; private, 98,724. Literacy is estimated at more than 75 per cent. The University of Havana, founded in 1721, had 18,379 students in 1952-53; Oriente University (Santiago), 1,256; Santa Clara, 767; Catholic University of Villanova (Havana), 523.

Half of the employed are engaged in agriculture, which normally accounts for more than 90 per cent of the exports. Often jolted by fluctuations in the price of sugar, of which it produced 6,250,000 short tons in 1957, Cuba has been seeking to vary its agricultural production. About two-thirds of the cultivated area is devoted to sugar cane. Other important crops are tobacco (1956 output: 47,750 short tons), coffee, cacao, fruits, vegetables, henequen, corn, pineapples and rice. The livestock and dairy industry has progressed.

Manufactured products include sugar, molasses, syrup, brandy, rum, alcohol, cigars, cigarettes, cigar boxes, sponges, cement, cordage, salt, dressed hides, dairy products and canned goods. The leading industry is the processing of sugar cane and its products.

Foreign trade (In millions of pesos):

	1954	1955	1956*
Exports	539.0	594.2	666.2
Imports	487.9	575.1	649.0

* Provisional.

Leading exports in 1956 were sugar (74%), tobacco and products (6%) and molasses (5%). Leading customers were the U. S. (65%), Japan (6%) and Britain (4%); leading suppliers, the U. S. (75%), Netherlands Antilles (3%), western Germany (3%) and Britain (3%).

Railroads (1956) included 3,677 miles of public track (mainline track: 3,019 miles) and 7,579 miles of industrial track, mostly on sugar estates. All-weather roads totaled 5,083 miles; other roads, 3,208 miles. The principal domestic air line is Cuban National Aviation Company, a Pan American subsidiary.

The budget for the fiscal year 1956-57 balanced revenue and expenditure at \$330,149,470. The consolidated public debt totaled \$612,874,863 on June 30, 1956.

NATURAL FEATURES AND RESOURCES; CLIMATE. Long, narrow Cuba has maximum dimensions of 730 by 160 miles, and is approximately the same size as Pennsylvania. It has mountainous areas in the southeast, central area and west, but the rest is flat or rolling. The coastline, measuring more than 2,100 miles, is indented by many large bays. Cuba's numerous short rivers are of slight importance commercially.

Rich mineral beds, mostly in the eastern province of Oriente, include iron, copper, manganese, chromium and nickel. Iron ore reserves are 90 per cent held by U. S. steel interests. Virtually all mineral exports go to the United States; in 1956 they included nickel, 18,409 metric tons; copper ore, 61,563 tons; manganese ore, 243,861 tons.

Cuba has an estimated 5,000,000 acres of wooded lands, but once plentiful hardwoods such as cedar and mahogany have become scarce and must be supplemented by imports.

The tempering influence of the trade winds on the island's tropical climate makes Havana's average temperature 77° with a range of only 10° (71° to 81°). The dry season lasts from November to April, and the warmer wet season occurs thereafter. Mean annual rainfall at Havana is about 50 inches.

trava (Moravska Ostrava), 183,794 (iron and steel products); (1947): Bratislava, 172,664 (Danube port); Plsen (Plzeň), 118,152 (Skoda steel works).

Monetary unit: Koruna.

Languages: Czech (67%), Slovak (25%), German (4%), Hungarian, Ukrainian, Polish.

Religions (est. 1947): Roman Catholic, 77%; Czechoslovak Church, 8%; Protestant, 7%; Greek Orthodox, .5%; Jewish, .5%; others and no confession, 7%.

HISTORY. Few nations have had a more tragic history than Czechoslovakia, which twice won and lost its independence within 30 years. Born out of World War I, the young republic was an early victim of Nazi aggression in 1938-39. At its rebirth in 1945 following World War II, it enjoyed a measure of its traditional democracy under the shadow of Soviet control. During the next three years Czechoslovakia made by far the greatest economic progress of all the Soviet satellites, but the government was subjected to increasing Communist pressure, climaxed in the spring of 1948 by the Communists' seizure of control and the resignation of President Beneš.

It was probably about the 5th century A.D. that the ancestors of the Czechs and Slovaks settled in the region of modern Czechoslovakia. Slovakia passed under Magyar domination, but the Czechs founded the kingdom of Bohemia, which was among the most powerful in Europe for centuries. German encroachment began in the 12th century and was furthered by the election in 1526 of a Hapsburg as Bohemian King. After the Czechs rebelled in 1618 and were defeated at the Battle of White Mountain in 1620, they were ruled for the next 300 years by the Hapsburgs as part of the Austro-Hungarian Empire. In World War I, Czech and Slovak patriots, notably Thomas G. Masaryk and Milan Stefanik, went abroad to promote support for Czech-Slovak independence, while Czechoslovak legions fought against the Central Powers. On Oct. 28, 1918, Czechoslovakia proclaimed itself a republic; shortly thereafter Masaryk was unanimously elected first President.

Between World Wars I and II, Czechoslovakia supported the League of Nations, formed the Little Entente with Yugoslavia and Rumania, and co-operated closely with France. President Masaryk was succeeded by Dr. Eduard Beneš in 1935.

Meanwhile, the German plan of aggression was under way. Czechoslovakia's German minority, led by Konrad Henlein, began demanding autonomy.

At the Munich conference on Sept. 30, 1938, France and Britain agreed that the Nazis could take the Czech Sudetenland on the German border. Dr. Beneš resigned on October 5, and Czechoslovakia became a federal union in the German orbit. The Poles, in the meantime, had seized Czech-

Czechoslovakia (Republic)

(Československá Republika)

Area: 49,354 square miles.

Population (est. 1956): 13,224,000 (1949: Czech, 67.0%; Slovak, 23.7% German, 3.2%; Magyar, 3.2%; Polish, Jewish and others, 2.9%).

Density per square mile: 267.9.

President: Antonin Zápotocký.

Premier: Viliam Široký.

Principal cities (est. 1948): Prague (Praha), 932,024 (capital, industrial center); Brunn (Brno), 277,196 (textiles); Os-

equipped with British assistance. The navy has 12 frigates and escort vessels, 3 submarines and several patrol vessels and smaller craft.

SOCIAL AND ECONOMIC CONDITIONS. Under the Danish system, schooling is compulsory from 7 to 14 and, for the most part, free. The famous popular high schools (*folkehøjskoler*) for adults number 57, all private but assisted by the state. The Royal University of Copenhagen, founded in 1479, has about 4,600 students and that of Århus about 1,750. Elementary, middle and secondary schools had 610,335 students in 1954. Illiteracy is practically unknown.

Social legislation is well advanced and provides for health insurance, disability and old-age pensions, workmen's compensation and social assistance, including poor relief and child welfare. The co-operative movement is also well organized.

Approximately ninety per cent of the land is productive and about three-quarters is actually farmed. Agrarian reform laws have operated to bring about a large number of small holdings. About two-fifths of the cultivated area is devoted to cereals. Root crops (fodder), potatoes and sugar beets also are important. The principal source of exports and of the nation's wealth is dairy farming and the production of meat and dairy products. Recent statistics are as follows (in thousands of metric tons):

	1954	1955	1956
Bacon and pork	524.0	531.8	500.2
Beef and veal	202.0	227.4	237.9
Butter	181.0	164.3	166.2
Cheese	81.0	86.8	84.5
Eggs	142.4	142.4	139.3
Milk	5,394.0	5,124.0	5,063.0

Livestock in July 1956 included 3,167,000 cattle, 4,630,000 hogs, 24,475,000 poultry.

Denmark produces primarily for home consumption, though some industrial products, such as Diesel motors, are large exports. The largest industries are food-processing and iron and metal. Others include chemicals and pharmaceuticals, wood and paper, clothing, textiles, machinery, beverages and leather.

Trade statistics, in millions of kroner:

	1954	1955	1956*
Exports	6,648	7,303	7,677
Imports	8,083	8,139	9,058

* Preliminary.

Leading suppliers in 1955 were Great Britain (26%), western Germany (19%), Sweden (9%) and the U. S. (8%). Chief customers were Great Britain (33%), western Germany (17%), the U. S. (7%) and Sweden (7%). Leading exports were meat and products (27%), dairy products, largely butter and eggs (24%), machinery

(12%) and live meat animals (6%). Leading imports: coal, coke, petroleum and products, machinery, vehicles and textiles.

The Danish merchant marine, one of the largest in the world on a per-capita basis, had 687 ships (100 tons and over) of 1,695,221 gross tons on June 30, 1956, according to *Lloyd's Register*. Regular communications with foreign countries are mainly westward by sea. There are ferry services from Copenhagen to Malmö, Sweden, and from Helsingör (Elsinore) to Hålsingborg.

The main land route to the rest of the continent is the railway via Padborg and Schleswig to Hamburg. Railway mileage totals about 3,050, over half nationalized. Train-ferry services for inter-island communication are highly organized. Motor transport also is well advanced, with about 35,700 miles of roads in 1955.

Recent public-finance data are as follows (in millions of kroner):

	1955-56*	1956-57†	1957-58†
Revenue	4,694	4,752	5,075
Expenditure	4,080	4,372	4,655

* Preliminary. † Budget estimate.

The total state debt on March 31, 1955, was 8,112,000,000 kr.

NATURAL FEATURES AND RESOURCES; CLIMATE. Denmark, only three miles from Sweden at the closest point, consists of the Jutland peninsula and the islands in the Baltic. The largest islands are Zealand, the site of Copenhagen; Fünen; and far to the east, Bornholm. The narrow waters to the north are called Skagerrak; and to the east, Kattegat.

The terrain of the whole kingdom is low but not flat. Its highest point is about 500 feet, and there are many lakes, ponds and short rivers. Sand dunes line the western Jutland coast almost without a break.

Mineral resources are negligible, although some granite and some kaolin are found on the island of Bornholm. Large quantities of coal and coke must be imported. Peat bogs supply an important source of fuel. Forest resources are unimportant.

The fishing industry, centered at Copenhagen but carried on also in the shallow fiords and in the deeper waters of the Baltic, North Sea and Skagerrak, is a basic part of the Danish economy. The 1956 catch of about 422,700 metric tons was valued at 237,100,000 kr.

Denmark's climate is like that of eastern England, but with colder winters and warmer summers. The average annual temperature is 45.2° (61° in July; 32° in January). Average rainfall is 24 inches.

Outlying Territories

FAEROE ISLANDS—Status: Autonomous part of Denmark.

Area: 540 square miles.

Population (est. 1955): 34,000.

Capital: Thorshavn (pop. 1950: 5,607).

Governor general: C. A. Vagn-Hansen.

Principal products: cod, whale oil, cod liver oil, wool, fertilizers, skins and leather.

This group of 21 islands, lying in the North Atlantic about 200 miles northwest of the Shetland Islands, joined Denmark in 1386 and has since been part of the Danish kingdom. The islands were occupied by British troops during World War II, after the German occupation of Denmark. The principal pursuits are fishing and sheep grazing. The Faeroes have home rule under a bill enacted in 1948; they also have two representatives in the Danish Folketing.

GREENLAND—Status: Integral part of Kingdom of Denmark.

Area: 839,782 square miles (almost 85 per cent glacier).

Population (census 1951): 24,159 (native except for 1,269 Europeans).

Capital: Godthaab (second governor's seat, Godhavn).

Governor general: Poul Hugo Lundsteen.

Foreign trade (1955): exports, 49,370,000 kr. (75% to Denmark); imports, 78,256,000 kr. (83% from Denmark). Chief exports: cryolite (41,792 metric tons), fish and products, hides and skins.

Greenland, the world's largest island, was colonized in 985-86 by Eric the Red. Danish sovereignty, which covered only the west coast, was extended over the whole island in 1917. In 1941 the United States signed an agreement with the Danish minister in Washington, placing it under U. S. protection during World War II but maintaining Danish sovereignty. A definitive agreement for the joint defense of Greenland within the framework of NATO was signed on April 27, 1951. A large U. S. air base at Thule in the far north was completed in 1953.

Under 1953 amendments to the Danish Constitution, Greenland is part of Denmark and has two representatives in the Danish Folketing. There is a popularly elected council.

Greenland is the world's only source of natural cryolite, important in the manufacture of aluminum. Large deposits of lead, zinc and wolfram were found on the eastern coast of Greenland after World War II.

Dominican Republic (República Dominicana)

Area: 18,703 square miles.

Population (est. 1956): 2,608,000 (1950: mestizo and mulatto, 60%; white, 28%; Negro, 12%).

Density per square mile: 139.4.

President: Héctor Trujillo y Molina.

Principal cities (census 1950): Ciudad

Trujillo, 181,553 (capital; sugar); Santiago de los Caballeros, 56,558 (tobacco); San Pedro de Macoris, 19,876 (sugar port); Puerto Plata, 14,843 (seaport).

Monetary unit: Dominican peso.

Language: Spanish.

Religion: Roman Catholic.

HISTORY AND GOVERNMENT. The Dominican Republic (formerly San Domingo) occupies the eastern two-thirds of the island which Columbus named La Española (now Hispaniola) when he discovered it on his first voyage in 1492. The other third is occupied by the republic of Haiti. The capital, Ciudad Trujillo, founded in 1496, is the oldest white settlement in the Western Hemisphere.

The Dominican Republic was variously under Spanish, French and Haitian domination until it established its independence in 1865 and then plunged into an unstable political history. U. S. Marines occupied it from 1916 to 1924, when a new Constitution was adopted. In 1930, Rafael Leónidas Trujillo y Molina, an army general, was elected President. In office most of the time during the succeeding 22 years, he brought about improved irrigation, roads, sanitation and schools. His brother, Héctor, was elected unopposed to succeed him in May 1952.

The President is elected every five years by popular vote in which women take part, and he is eligible to be re-elected indefinitely. The 21-member Senate and the 47-member Chamber of Deputies are also elected for 5 years. Each of the 20 provinces has an appointed Governor.

There is a 12,000-man army and a small air force. The navy has 2 destroyers, 9 frigates and escort vessels and other smaller craft.

SOCIAL AND ECONOMIC CONDITIONS. Education is free and compulsory from 7 to 14. In 1954, there were 2,641 schools with 246,734 students. The University of Santo Domingo had 2,560 enrolled. According to the 1950 census, 56.7% of those 10 years of age and over were illiterate.

Primarily agricultural, the country produces sugar (1955-56: 662,000 metric tons), coffee (610,000 bags of 132 lb. each), cacao (60,000,000 lb.), tobacco, bananas, rice, corn, cassava, beans, sweet potatoes. Cattle raising is of growing importance.

Sugar refining is the only important industry, although several new industries have been established in recent years.

Foreign trade (in millions of pesos):

	1954	1955	1956
Exports	119.7	114.8	124.6
Imports*	82.8	98.1	108.3

* Includes duty-free merchandise.

Leading exports in 1956 were sugar (46%), coffee (26%) and cacao (11%). Chief customers were the U. S. (47%)

and Britain (27%); leading suppliers, the U. S. (66%) and Germany (6%). The main imports are cotton goods, iron and steel products, chemicals and machinery.

Transit facilities include about 170 miles of public railway, more than 600 miles of sugar plantation railway, and more than 3,000 miles of highway.

The 1956 budget estimated revenue at \$122,729,500 and expenditure at \$119,972,890. There is no public debt.

NATURAL FEATURES; CLIMATE. Crossed from northwest to southeast by a mountain range with maximum elevations exceeding 10,000 feet, the country has fertile, well-watered land on the northeast side, where nearly two-thirds of the population lives. The southwest part is arid and with poor soil except around Ciudad Trujillo. The country has many good harbors.

There is little range in temperature, with mean January average of 74°, and August average of 81°. The elevated interior is cooler than the coastlands. Rainfall occurs mainly May to November.

Ecuador (Republic) (República del Ecuador)

Area: 105,743 square miles.

Population (est. 1956): 3,777,000 (1942: mestizo, 41%; Indian, 39%; white, 10%; Negro, 5%; others, 5%).

Density per square mile: 35.7.

President: Camillo Ponce Enriquez.

Principal cities (census 1950): Guayaquil, 258,966 (chief port); Quito, 209,932 (capital); Cuenca, 39,983 (trading center); Ambato, 31,312 (commercial center).

Monetary unit: Sucre.

Languages: Spanish, Quéchua.

Religion: Roman Catholic.

HISTORY. Mostly forested and mountainous and a little larger than Colorado, Ecuador has a long history replete with the forceful rule of dictators. The Spanish under Francisco Pizarro conquered the land in 1532 by defeating the Inca Atahualpa. The first revolt against Spain occurred in 1809, but the victory was not complete until the Battle of Pichincha on May 24, 1822. Ecuador then joined Venezuela and Colombia in a confederacy founded by Simón Bolívar and known as Colombia, but withdrew amicably and became independent in 1830. The country's subsequent history has been largely one of dictatorships, notably under Juan José Flores, Gabriel García Moreno and Eloy Alfaro. Since 1900, administrations have fallen, usually by force, on the average of every two years. Shortly before the 1944 elections, President Carlos Arroyo del Río was forcibly replaced by José Velasco Ibarra, recalled from exile in Colombia. Velasco Ibarra, confirmed in office by the voters later in the year, followed the old

pattern by assuming the role of dictator in 1946 and suppressing opposition.

Velasco was deposed in Aug. 1947, and Carlos Julio Arosemena took over as provisional President until Sept. 1, 1948, when Galo Plaza Lasso, victor in the June 6 elections, took office. Velasco was returned to office in the June 1952 elections. Camillo Ponce Enriquez was elected to succeed him in 1956.

For more than a hundred years, Ecuador disputed its boundary with Peru, frequently resorting to arms. After hostilities started again in 1941, both nations submitted to mediation, and in 1944 Ecuador lost most of the disputed area. The dispute broke out anew in 1951.

GOVERNMENT AND DEFENSE. Under the 1946 (16th) Constitution, Ecuador elects a President for four years by direct vote, and he is ineligible for further service until at least one term intervenes. The Congress is bicameral, with a Senate and Chamber of Deputies. There are 18 provinces, including the Galápagos Islands (3,029 sq. mi.), 650 miles off the coast.

Military service is compulsory at eighteen. The army numbers 10,000 and 40,000 reserves. The navy has 3 frigates, a training ship and several smaller craft. There is an aviation school at Guayaquil and also a naval school at Salinas.

SOCIAL AND ECONOMIC CONDITIONS. Education is free, compulsory and under state control, but illiteracy is very high—43.7% (10 years of age and over) according to the 1950 census. In 1952 there were 3,706 primary schools with 352,396 pupils and 182 secondary schools with 32,390. There are universities at Quito (2), Guayaquil and Cuenca, and a law school at Loja.

Although agriculture is the basis of Ecuador's economy, less than 12,000,000 acres are devoted to it. Cacao, the chief crop (1955-56: 60,000,000 lb.), is grown in coastal regions and lower river valleys, along with rice, sugar cane, coffee, bananas, tobacco and cotton. The plateaus and mountain valleys are used for grazing and dairying, and raising cereals and potatoes. After textiles, one of Ecuador's main industries is the manufacture of Panama hats, made of Toquilla straw.

Foreign trade (in millions of U. S. dollars):

	1954	1955	1956*
Exports†	129.5	122.7	123.8
Imports	102.3	89.7	80.2

* Provisional. † Adjusted for banana undervaluation.

Leading exports in 1956 were bananas (55%), coffee (24%) and cacao (14%). Leading customers were the U. S. (60%); Germany (12%) and Colombia (5%); leading suppliers, the U. S. (52%), Germany (12%) and Belgium (7%).

Railroad mileage in operation is 698, all nationalized. The principal road connects the chief port, Guayaquil, with Quito. Highway mileage in 1955 was about 6,250.

In 1955 ordinary government revenue totaled 730,270,000 sucres; expenditure, 665,735,000 sucres. On Sept. 30, 1956, the foreign debt was \$25,109,000; the internal debt, 493,839,000 sucres.

NATURAL FEATURES AND RESOURCES; CLIMATE. Two high and parallel ranges of the Andes, traversing Ecuador from north to south, are topped by tall volcanic peaks. The region between the mountains and the coast is hot and swampy.

Ecuador produced 18,479 troy oz. of gold and 35,100 oz. of silver in 1954. Copper and lead are also mined. In 1955, 3,534,000 barrels of petroleum were produced. The country is the world's chief source of light, strong balsa wood, and exported 3,918 metric tons in 1955. Exports of rubber reached a high of 3,035 metric tons in 1943; but no exports were reported in 1953-56. Dyewood, cinchona bark, kapok, vegetable ivory are produced.

Though Ecuador, as its name implies, lies on the equator, its climate ranges from tropical and temperate to the Arctic conditions of its snow-capped peaks. Temperatures on the coast average 83°; on the Andean plateau, about 46° to 70°. The rainy season extends from December through April or May.

Egypt (Republic)

(Misr)

Area: 386,100 square miles.

Population (est. 1956): 23,410,000 (1944: Egyptian, 95.4%; Arabian, 1.7%; Greek, .6%; others, 2.3%).

Density per square mile: 60.6.

President: Gamal Abdel Nasser.

Principal cities (est. 1952): Cairo, 2,367,900 (capital); Alexandria, 1,070,000 (chief port); Port Said, 186,300 (Suez Canal terminus); Tanta, 147,800 (railroad center, Nile delta).

Monetary unit: Egyptian pound (£E).

Language: Arabic.

Religions: Moslem, 91%; Christian (mostly Copt and Greek Orthodox), 8%; others, 1%.

HISTORY. Egypt, half again the size of Texas, and the largest and most influential of the Arab states, has been an object of big-power controversy for centuries.

Egyptian history dates back to about 4000 B.C., when the kingdoms of upper and lower Egypt, already highly civilized, were united. Egypt's "Golden Age" coincided with the 18th and 19th dynasties (16th to 13th centuries B.C.), during which the empire was established. Persia conquered Egypt in 525 B.C.; Alexander the Great subdued it in 332 B.C., and then the dynasty of the Ptolemies ruled the land until 30 B.C.,

when Cleopatra, last of the line, committed suicide and Egypt became a Roman province. From 641 to 1517 the Arab Caliphs ruled Egypt, and then the Turks took it and made it part of their Ottoman Empire. Napoleon's armies occupied the country from 1798 to 1801. In 1805, Mohammed Ali, leader of a band of Albanian soldiers, became Pasha of Egypt. After completion of the Suez Canal in 1869, both the French and British took increasing interest in Egypt.

British troops occupied Egypt in 1882, and British resident agents became its actual administrators, though it remained under nominal Turkish sovereignty. On Dec. 18, 1914, this fiction was ended and Egypt became a British protectorate.

Pressure by Egyptian nationalists forced Britain to declare Egypt an independent, sovereign state on Feb. 28, 1922, although the British reserved rights for the protection of the Suez Canal and the defense of Egypt. On Aug. 26, 1936, by an Anglo-Egyptian treaty of alliance, all British troops and officials were to be withdrawn, except from the Suez Canal zone. When World War II started, Egypt remained neutral. British imperial troops finally ended the Nazi threat to Suez in 1942 in the battle of El Alamein, which took place west of Alexandria.

British troops were evacuated from Cairo and Alexandria in 1946, but Anglo-Egyptian negotiations for revision of the 1936 treaty broke down after British refusal to recognize Egyptian sovereignty over the Anglo-Egyptian Sudan.

In Oct. 1951, Egypt abrogated the 1936 treaty and the 1899 agreement on the Sudan. Rioting and attacks on British troops in the Suez Canal zone followed, reaching a climax in Jan. 1952.

The army, led by Gen. Mohammed Naguib, seized power on July 23, 1952. On July 26, King Farouk abdicated in favor of his infant son. Naguib took over the premiership on Sept. 7, 1952, and promised far-reaching reforms. The monarchy was abolished and a republic proclaimed on June 18, 1953, with Naguib holding the posts of both provisional President and Premier. He relinquished the latter post on April 18, 1954, to Gamal Abdel Nasser, leader of the ruling military junta. Naguib was deposed by the Cabinet and junta on Nov. 14, 1954.

Nasser was confirmed as President in a popular referendum held on June 23, 1956. He responded to Russian and satellite overtures to provide Egypt with economic and military aid. Egypt was invaded by separate Israeli and Anglo-French forces in late Oct. and early Nov. 1956; hostilities ceased following UN intervention and foreign troops were ultimately withdrawn.

GOVERNMENT AND DEFENSE. The 1956 Constitution, which was drafted by the military regime and approved by the people in a referendum held on June 23, 1956, provides for a presidential type of republican government. Legislative power is vested in the National Assembly, elected for five years. Executive power is vested in the President, who serves for six years and is nominated by the Assembly and confirmed (or disapproved) by the people in a referendum. He is assisted by a Cabinet of ministers. Political parties are suspended until such time as a law is passed authorizing them. All persons over the age of 18 have the right to vote.

Military service for all Egyptians is compulsory. The Egyptian army, strengthened and modernized during World War II, has about 160,000 men, including police units under military control. The air force has about 150 combat planes, and the navy 4 destroyers, 7 frigates and escort vessels and other smaller craft.

A treaty between Egypt and Britain signed Oct. 19, 1954, required the evacuation of British troops from the Suez canal zone but provided for the maintenance by civilians of defense installations there and gave Britain the right to reoccupy the zone under certain circumstances. The agreement was unilaterally denounced by Egypt effective Jan. 1, 1957.

SOCIAL AND ECONOMIC CONDITIONS. Education is compulsory between the ages of 6 and 12. In 1955-56 there were 7,500 primary schools with 1,860,000 pupils and 600 secondary schools with 435,000 pupils. The University Mosque of el-Azhar in Cairo (founded A.D. 972) is the chief theological seminary of the Moslem world. The University of Cairo (founded 1908), the University of Alexandria (founded 1943) and Ibrahim University (founded 1950) had a total of 60,376 students in 1955-56. Illiteracy is extremely high, being placed at about 74.5% in the latest estimate (1947).

The majority of the people are Sunni Moslems. The Christians are mainly Copts with an admixture of Armenian, Syrian and Maronite sects. The population divides generally into fellahin (peasantry) and townspeople of the same blood, the Bedouin or nomad Arabs of the desert, and the Berbers, who occupy the Nile valley between Aswan and Dongola. The foreigners are chiefly Greeks (whose main center is Alexandria), French, British and Italians. The density of population in the small inhabited area in the Nile valley and delta (about 13,600 sq. mi.) is far greater than that of either the Netherlands or Belgium.

Agriculture is the chief industry, engaging more than half the population. Only about 3.5 per cent (8,600,000 acres)

of the total area is arable, and only about 6,000,000 acres are actually under cultivation, almost entirely in the Nile valley and delta. More than half the cultivated area comprises farms of less than 20 acres. Irrigation is indispensable to agriculture; the Aswan reservoir above the first cataract of the Nile holds up to 5,500,000,000 cubic meters of water and the reservoir of Gebel Aulia, in the Sudan, 2,000,000,000 cubic meters. In the delta and in middle Egypt, where perennial or canal irrigation is possible, two or three crops a year can be grown. The chief cash crop is cotton, of which Egypt is one of the world's leading producers.

Production statistics for 1955 were as follows: wheat, 1,451,000 metric tons; maize, 1,713,000 tons; rice (paddy), 1,268,000 tons; sugar, 300,000 tons; cotton (lint) (1955-56), 334,000 tons.

Other crops include beans, garden crops, dates and grapes. The pastoral industry is relatively unimportant except to the Bedouins in the eastern desert.

Industry includes sugar refining, cotton ginning, cement manufacture, milling and pottery, soap and perfume making. The Sugar Company of Egypt holds a monopoly on the sugar refining industry.

Foreign trade statistics (in millions of Egyptian pounds) are as follows:

	1954	1955	1956*
Exports	138.3	138.4	142.2
Imports	161.3	182.9	186.0

*Provisional.

In 1956, Egypt's chief customers were Czechoslovakia (15%), Japan (7%), western Germany (7%) and the Sudan (6%); leading suppliers, the U. S. (13%), Britain (12%), western Germany (11%) and Italy (6%). Leading exports were raw cotton (70%) and rice (6%).

Imports included wheat, petroleum, fertilizers, iron and steel products, textiles and machinery and vehicles.

Navigable throughout its course in Egypt, the Nile is used largely as a means of cheap transport for heavy goods. The principal port is Alexandria. Railways link Cairo and Alexandria with Suez and nearly every town in the delta. According to *Lloyd's Register*, the merchant marine had 66 ships (100 tons and over) aggregating 128,150 gross tons on June 30, 1956. Cairo has a major airport.

Budget estimates for the fiscal year 1956-57 balanced revenue and expenditure at £E326,270,000. The public debt was £E271,300,000 on June 30, 1956.

NATURAL FEATURES AND RESOURCES; CLIMATE. Egypt, at the northeast corner of Africa, is a very rough square, with the historic Nile flowing northward through its eastern third. On either side of the Nile

valley are desert plateaus, spotted with oases. In the north, toward the Mediterranean, plateaus are low, while south of Cairo they rise to a maximum of 1,015 feet above sea level. At the head of the Red Sea, at the northeast corner of Egypt, is the triangular Sinai peninsula, between the Suez Canal and Israel.

The Nile delta starts 100 miles south of the Mediterranean and fans out to a sea front of 155 miles between Alexandria and Port Said. From Cairo north, the Nile branches into many streams, the principal of which are the Damietta and the Rosetta, joined by a network of canals.

The most important minerals are manganese ore, phosphate (1955: 646,700 tons) and petroleum (1956: 11,960,000 barrels). Gold, iron ochres, nickel, sodium carbonate, sulfate talc and tungsten also are mined.

Egypt has no forests. Total value of fishery products was \$18,665,000 in 1953, representing a catch of 93,861 short tons.

Except for a narrow belt on the Mediterranean, Egypt lies in an almost rainless area, in which high daytime temperatures fall quickly at night. The mean temperature at Cairo varies between 53° in January and 84° in July; at Alexandria, between 57° in January and 81° in July. South of Cairo, pure desert conditions prevail; at Aswan the mean maximum temperature is 118°.

SUEZ CANAL. The Suez Canal, in Egyptian territory between the Arabian Desert and the Sinai peninsula, is an artificial waterway about 100 miles long between Port Said on the Mediterranean and Suez on the Red Sea. Construction work, directed by the French engineer Ferdinand de Lesseps, was begun April 25, 1859, and the canal was opened Nov. 17, 1869. The cost was 432,807,882 francs. The concession is held by an Egyptian joint stock company, *Compagnie Universelle du Canal Maritime de Suez*, in which the British government holds 353,504 out of a total of 800,000 shares. The concession was to expire Nov. 17, 1968, but the company was nationalized July 26, 1956, by unilateral action of the Egyptian government. As a result of hostilities the canal was blocked between Nov. 1956 and March 1957.

On the board of management of the canal prior to its seizure were 1 Dutch, 1 American, 5 Egyptian, 16 French and 9 British directors.

SUEZ CANAL STATISTICS

Year	Ships	Net Tonnage	Receipts
1951	11,694	80,356,338	£E26,160,000
1952	12,168	86,137,037	£E26,729,900
1953	12,731	92,905,439	£E28,901,200
1954	13,215	102,493,851	£E30,338,851
1955	14,666	115,756,308	£E32,176,600

In 1955, 28.3% of the tonnage was British, 13.5% Norwegian, 12.1% Liberian, 9.3% French and 8.0% Italian. Over 60% of the goods traffic consisted of crude petroleum and petroleum products.

Estonia

Area: 17,400 square miles.

Population (est. 1956): 1,100,000 (1940: Estonians, 88%; Russians, 9%; Germans [Balts], 1%; others, 2%).

Density per square mile: 63.2.

Principal cities (est. 1938): Tallinn, 146,400 (capital); Tartu, 60,100 (university town); Narva, 24,200 (seaport).

Language: Estonian (Finno-Ugrian).

Religions: Lutheran, 78%; Greek Orthodox, 19%; others, 3%.

Born out of World War I, this small Baltic state enjoyed two short decades of independence before it was absorbed again by its powerful neighbor, Russia. In the thirteenth century, the Estonians had been conquered by the Teutonic Knights of Germany, who reduced them to serfdom. In 1521, the Swedes took over, and the power of the German (Balt) landowning class was curbed somewhat. But after 1721, when Russia succeeded Sweden as the ruling power, the Estonians were subjected to a double bondage—the Balts and the tsarist officials. The oppression lasted until the closing months of World War I, when Estonia finally achieved independence.

Shortly after the start of World War II, the nation was occupied by Russian troops and was incorporated as the 16th republic of the U.S.S.R. in 1940. Germany occupied the nation from 1941 to 1944, when it was retaken by the Russians. Most of the nations of the world, including the U. S. and Great Britain, have not recognized the Soviet incorporation of Estonia.

Ethiopia (Kingdom)

(Abyssinia)

Area: 457,142 square miles.*

Population (est. 1954): 16,000,000* (Abyssinian [Amhara], 20%; Galla, 50%; others, 30%).

Density per square mile: 35.0*

Ruler: Emperor Haile Selassie I.

Prime Minister: Bitwoded Makonnen Endalkatchau.

Principal cities (est. 1951): Addis Ababa, 401,915 (capital); Asmara, 117,000 (capital, Eritrea); Harar, 45,000 (coffee); Dessie, 35,000 (grain center); Dire Dawa, 30,000 (railway workshops).

Monetary unit: Ethiopian paper dollar.

Languages: Amharic, Arabic.

Religions: Copt (Christian), Moslem.

* Including Eritrea.

HISTORY. The historic origins of the Ethiopian state are unknown, but the

royal family traces its origin (about 1,000 B.C.) to the Queen of Sheba and to Menelik, King Solomon's first son. Christianity was introduced about A.D. 330, and after the Arab conquest of northern Africa in the 7th century, Ethiopia was more or less cut off from the outside world for a thousand years. When Theodore III proclaimed himself Emperor in 1853, the country was a conglomeration of autonomous provinces under hereditary chiefs who were usually at war with one another. Menelek II, who ascended the throne in 1889, brought Ethiopia under single rule, and his forces finished off a five-year Italian attempt at invasion with a great massacre at Aduwa on March 1, 1896. Thereafter, Ethiopia moved in the orbit of England and France.

The defeat at Aduwa was not forgotten by Italy, which, after creating fake border incidents, invaded Ethiopia on Oct. 3, 1935, despite the threat of League of Nations sanctions. Addis Ababa fell on May 5, 1936, and Ethiopia was amalgamated with Italian Somaliland and Eritrea into Italian East Africa.

World War II brought early liberation; Ethiopia, in fact, was the first of the Axis-occupied nations to be retaken by the Allies. British and Ethiopian troops reconquered the country in 1941, with the final Italian surrender occurring on Nov. 27. During a transition period thereafter, the nation was under dual Anglo-Ethiopian control. Under an agreement signed on Jan. 31, 1942, British troops quit the country except for stipulated border areas. The latter were evacuated in Aug. 1948.

After the war, the country launched a modernization program in agriculture, industry and education. Irredentist claims to the ex-Italian colonies and former Ethiopian provinces, Eritrea and Somaliland, began to be voiced in 1946. In December 1950, the U. N. General Assembly voted to federate Eritrea with Ethiopia under the sovereignty of the Ethiopian Crown. The federation of the two countries became effective on Sept. 15, 1952.

GOVERNMENT AND DEFENSE. Emperor Haile Selassie I was born July 17, 1891, crowned King on Oct. 7, 1928, and Emperor on Nov. 2, 1930. His eldest son, the Crown Prince and heir apparent, is Asfa Wassan, born on July 27, 1916. The Emperor directly controls the government, though there now is a Council of Ministers, a Senate and a Chamber of Deputies. All members are appointed by the monarch, however.

In wartime, military service is compulsory. The small Ethiopian standing army is equipped and trained by a British military mission. A small Ethiopian force was dispatched to Korea in 1951.

SOCIAL AND ECONOMIC CONDITIONS. The education system is extremely back-

ward. Foreign missions or the government maintain schools in the principal towns, and several secondary schools have been set up. There were 431 state primary schools with 69,000 pupils in 1953-54, 11 secondary with 2,155. Illiteracy is estimated at 70%. The Coptic Church (Christian), with its numerous priests, exercises powerful influence and owns much Ethiopian land. It became independent of the Coptic Archbishop of Alexandria in 1946. Moslems, numerous in frontier regions, have their religious center at Harar.

Ethiopia is generally fertile, predominantly agricultural and pastoral, with many regions yielding two crops a year. The chief crops are maize, wheat, barley, rye, cotton, sugar cane, millet, hemp, vegetables, coffee and teff (the common bread grain). The country's inadequate transport system, however, makes crop growing largely a local industry.

The country grazes several million cattle, and many goats and sheep. Horses and mules are bred extensively as pack animals and mounts. There is little manufacturing except for small native industry, although the Italians built some industrial plants during their five-year occupation.

Recent trade data (for years beginning Dec. 11, in millions of Ethiopian dollars):

	1953-54	1954-55	1955-56
Exports*	160.3	162.2	151.3
Imports	160.1	168.0	156.9

* Excluding specie.

Chief exports in 1954-55 were coffee (56%), hides and skins (10%) and oilseeds (11%). Leading customers were the U. S. (25%), Aden (21%) and Italy (19%); leading suppliers, Italy (15%), India (14%) and the U. S. (13%). Major imports were cotton piece goods, machinery, sugar and salt.

The 486-mile track from Addis Ababa to Djibouti in French Somaliland is Ethiopia's only rail outlet and its principal trade route. Motorable roads, non-existent until about 1925, now total over 9,000 miles.

Government revenue in 1954-55 totaled Eth.\$119,988,000; expenditure, Eth.\$117,745,000.

NATURAL FEATURES AND RESOURCES; CLIMATE. Over its main plateau-land, Ethiopia has several high mountains. Most of the many rivers are rapid, not navigable, and flow into the Nile. The Blue Nile, or Abbai, rises in the northwest and flows in a great semicircle east, south and northwest before entering Sudan. Its chief reservoir, Lake Tana, lies in the northwestern part of the plateau.

Gold, produced from placer mines worked by natives in the south and west, is Ethiopia's main mineral. Platinum also is mined in fair commercial quantities. Other

minerals are rock salt, cinnabar, copper, iron, mercury, mica, potash and sulfur. Oil deposits are believed to exist, and all drilling rights have been sold to the Sinclair Refining Company of the U. S.

Ethiopia, lying wholly within the tropics, escapes a torrid climate because of its elevation, although the lowlands are hot. The mean annual range of temperature is between 60° and 80°, although Alpine conditions prevail in the higher mountains. Addis Ababa has about fifty inches of rain annually.

ERITREA—Status: Federated with Ethiopia.

Area: 47,875 sq. mi.

Population (est. 1955): 1,104,000.

Capital: Asmara (population: 117,000).

Sovereign: Haile Selassie I.

Chief Executive: Fitaaurari Asfaha Wolde-mikael.

Agricultural products: coffee, barley, tobacco, sesame, hides, skins.

Minerals: gold, salt, potassium salts.

Sea product: pearls.

The first Italian inroad into Eritrea came in 1870 when the port of Assab and adjacent territory were bought from a native sultan; with British approval, Italian troops occupied Massaua in 1885. By a decree of Jan. 1, 1890, Italian possessions along the Red Sea were united into the colony of Eritrea. In 1936 Eritrea became a part of Italian East Africa. British and Indian troops captured Asmara on Apr. 1, 1941, and Massaua a week later; the area, reduced to its pre-1936 borders, then came under British military administration. The U. N. General Assembly on Dec. 2, 1950, adopted a plan for federation of an autonomous Eritrea with Ethiopia under the sovereignty of the Ethiopian Crown, federation becoming effective Sept. 15, 1952.

As an autonomous, self-governing area, Eritrea has its own elected assembly which selects the chief executive. It is also represented in the Ethiopian Parliament. Matters reserved to the Ethiopian government include defense, foreign affairs, foreign trade, finance and communications.

The principal native elements are the Ethiopians and Tigrés, who have close ethnic, linguistic and religious ties with peoples in neighboring Ethiopia. Irrigation is essential in the coastal plains, and agriculture is practiced largely on the interior plateau (average elevation: 6,500 ft.).

Along the coast, the climate is excessively hot and humid, and rainfall is less than 8 inches a year.

Finland (Republic)

(Suomen Tasavalta)

Area: 130,119 square miles.

Population (est. Jan. 1, 1957): 4,314,000 (Finnish, 90%; Swedish, 10%).

Density per square mile: 33.2.

President: Urho Kekkonen.

Premier: Veino J. Sukselainen.

Principal cities (est. Jan. 1, 1957): Helsinki, 428,000 (capital); Tampere, 115,700 (textiles, paper); Turku (Abo), 114,400 (seaport, shipbuilding); Lahti, 60,500 (glass, lumber); Oulu, 49,300 (seaport, shipbuilding).

Monetary unit: Markka (FM).

Languages: Finnish, Swedish.

Religions (1949): Evangelical Lutheran, 97%, Greek Orthodox, 2%; others, 1%.

HISTORY. The Finns, a people of possibly Mongolian origin, first settled their Montana-sized area about A.D. 100. King Eric IX of Sweden conquered them about 1155 and introduced Christianity. Under Swedish rule, which lasted for 650 years, the Finns retained considerable autonomy and were given their own parliament in the 17th century.

Political pressure growing out of the Napoleonic Wars forced Sweden in 1809 to cede Finland to Russia, which gave the Finns a Constitution and set them up as a grand duchy. Out of the chaos and complexities of World War I, the Russian revolution of 1917 and a Finnish civil war in 1918 between "Reds" and "Whites" led by Baron Carl G. von Mannerheim, Finland emerged as a republic in 1919. A year later Russia ceded to Finland the Petsamo area with its ice-free Arctic port.

For the next twenty years Finland was generally orderly and prosperous except for vigorous suppression of Communists and a bloodless rightist uprising in 1932. In Nov. 1939, however, Russia attacked Finland to enforce territorial demands. The sturdy Finns stood off large-scale Red Army assaults for 105 days, but finally lost. Under German pressure the Finns joined the Nazis against Russia in 1941—and lost again.

Baron Mannerheim (who had led Finnish forces in both wars with the U.S.S.R.) became President in 1944, and Finland severed relations with Germany on Sept. 2, signed an armistice and concluded a provisional peace treaty with Britain and Russia, Sept. 19. The U. S. had not declared war on Finland.

Pro-Russian Juho K. Paasikivi became Premier on Nov. 11, 1944, and when Mannerheim resigned because of illness on March 4, 1946, Paasikivi was elected to fill the unexpired term. The premiership went to Mauno Pekkala, leader of the new Socialist Unity party, advocating co-operation with the Communists.

The Communists and their allies lost ground in the July 1948 parliamentary election; and on July 29, Karl August Fagerholm formed a Social Democrat government in which the leftist bloc was not represented. Paasikivi was re-elected for a full 6-year term in Feb. 1950, and on Mar.

17, Fagerholm was succeeded as Premier by Urho Kekkonen at the head of a centrist minority Cabinet. He yielded on Nov. 17, 1953, to Sakari S. Tuomioja. After the Mar. 1954 elections, Swedish party leader Ralf Toerngren formed a coalition Cabinet on May 5, 1954, but Kekkonen took over again on Oct. 20, 1954. Kekkonen was elected President on Feb. 15, 1956, and Fagerholm succeeded him as Premier. Following a split in the Social Democratic party, Veino J. Sukselainen of the Agrarian party became Premier May 27, 1957.

GOVERNMENT. Under the 1919 Constitution, the 200 Diet members are popularly elected by a proportional-representation system for three-year terms. The President, normally chosen for six years by an Electoral College of 300 members nominated by the people, acts through his Cabinet headed by the Prime Minister. Suffrage is universal. Because of the many political parties, government usually is carried on by a coalition, with frequent Cabinet changes.

Party standing in the Diet after the elections of March 1954 was as follows (1951 standings are shown in parentheses): Social Democrats, 54 (53); Agrarian, 53 (51); Communists, 43 (45); Conservatives, 24 (26); Swedish People's party, 13 (15); National, 13 (10).

The Swedish-populated Åland islands (581 sq. mi.) have an autonomous status under a law passed in 1951.

PEACE TREATY OF 1947. The final peace treaty became effective Sept. 15, 1947; it confirmed the *de facto* cession to the U.S.S.R. of the Petsamo area, Viipuri and the Karelian region and also of the Porkkala-Udd area west of Helsinki for use as a Soviet naval base. Finland was to pay reparations of \$300,000,000 in kind (reduced to \$225,000,000 by the U.S.S.R. in 1948) over a period of eight years from Sept. 19, 1944. Reparations payments were completed in Sept. 1952. Porkkala was returned to Finland in Jan. 1956.

The treaty limited Finnish defense forces to the following strengths: army, 34,400 personnel; navy, 4,500 personnel and a tonnage of 10,000; and air force, 3,000 personnel and 60 aircraft. The possession of bombers, submarines, atomic weapons and motor torpedo boats is prohibited.

SOCIAL AND ECONOMIC CONDITIONS. Illiteracy is very low (less than 1% beyond the age of 15). Education is compulsory from 7 to 15. In 1954-55 there were 6,481 elementary schools with 564,807 students and 373 secondary schools with 135,348 pupils. There are three regular universities, of which Helsinki has the largest enrollment (8,441 in 1954-55).

Only about 3 per cent of the land is under cultivation, and about 5 per cent in

grassland. The chief crops (with estimated 1956 production in metric tons) are oats, 658,944; barley, 286,354; rye, 123,742; potatoes, 1,693,435. Grazing lands are extensive. In 1956, there were 1,827,070 cattle, 565,738 sheep, 434,584 hogs and 151,701 reindeer.

The leading Finnish manufactures are wood and paper (about one-third the total value), food, luxury items, machinery and textiles. With the cession of the Karelian isthmus and the city of Viipuri to the U.S.S.R., Finland lost valuable manufacturing areas. Helsinki is the principal industrial center.

Trade statistics are as follows (billions of markkas):

	1954	1955	1956
Exports	156.62	181.30	177.99
Imports	152.14	176.96	203.56

Chief exports in 1956 were wood and wood products (32%), paper (25%) and wood pulp (21%). Leading customers were Britain (21%), U.S.S.R. (19%), western Germany (9%) and the U. S. (7%); leading suppliers, Britain (20%), U.S.S.R. (14%), western Germany (12%) and the U. S. (7%).

According to *Lloyd's Register*, the merchant marine on June 30, 1956, had 353 ships (100 tons and over) aggregating 751,818 gross tons. The numerous lakes, many joined by canals, are busy routes used by both ships and timber rafts. There were approximately 39,000 miles of road in 1953. Railway mileage in 1956 totaled 3,217, almost entirely nationalized.

Recent public finance data are as follows (in billions of markkas):

	1955*	1956†	1957†
Revenue	235.4	215.3	250.0
Expenditure	243.0	215.3	250.0

* Preliminary estimate. † Budget estimate.

The total public debt was estimated at 128,000,000,000 FM on Dec. 31, 1956.

NATURAL FEATURES AND RESOURCES; CLIMATE. Finland stretches 700 miles from the Gulf of Finland on the south to Soviet Petsamo, north of the Arctic Circle. Off the southwest coast are the Åland Islands (approximately 300), controlling the entrance to the Gulf of Bothnia. Finland has more than 60,000 lakes. Of the few rivers, only the Oulu (Uleå) is navigable to any important extent.

Finland has no coal or oil, and many of its ore deposits are remote from transportation. Finland's sulfide ore (production in 1956: about 1,928,400 metric tons) is 4 per cent copper, 26 per cent sulfur and 27 per cent iron, with some zinc, cobalt, gold and silver. Limestone, soapstone and red granite deposits are extensive, and uranium deposits are believed to exist. Wood and peat are the only natural fuels.

More than a third of Finland is covered with high quality timber, the nation's richest natural resource. Timber production in 1956 was about 810,000 standards; cellulose, 1,859,100 metric tons; mechanical pulp, 185,100 tons; paper, 102,200 tons; cardboard, 293,300 tons.

Finnns have fished for centuries, not commercially, but for domestic consumption. The 1956 catch was about 60,200 metric tons valued at 4,800,000,000 FM.

Finland's long severe winters are moderated somewhat along the coast by prevailing southwest winds, but the summer lasts only about two and a half months of the year. Southerly Finnish ports are icebound part of the year. Rainfall is light, with the driest months from May to September.

France (Republic)

(République Française)

Area: 212,736 square miles.

Population (est. Jan. 1957): 43,787,000 (1954: French, 96.6%; others, 3.4%).

Density per square mile: 205.8.

President: René Coty.

Premier: Maurice Bourgès-Maunoury.

Principal cities (census 1954): Paris, 2,850,189 (capital); Marseilles, 661,492 (chief port); Lyons, 471,270 (silk, metal manufacture); Toulouse, 268,863 (tobacco; commercial center); Bordeaux, 257,946 (wine; seaport); Nice, 244,360 (resort center); Nantes, 222,790 (manufacturing).

Monetary unit: Franc.

Religion (est.): Roman Catholic, 97.5%; Protestant and others, 2.5%.

HISTORY. France was ancient Gaul when Caesar conquered a part of it in 57-52 B.C.; for several centuries thereafter it was bound to the Roman Empire. In the 5th century A.D., it was overrun by the Franks and other barbarian tribes. Between 768 and 814, Charlemagne created a Frankish empire covering most of Western Europe, but by the time Hugh Capet came to the throne in 987, his kingdom comprised only the region around Paris. For more than 300 years the Capets struggled to unify the many feudal fiefs.

Philip VI, cousin of the last Capet and first of the House of Valois, took the throne in 1328. Soon thereafter began the Hundred Years' War (1338-1453), the struggle over England's bid to seize the French Crown. The English won at Crécy in 1346 and at Agincourt in 1415, but were defeated at Orléans in 1429 by the French forces led by Joan of Arc. Cruel persecution of French Protestants, the Huguenots, was followed by civil war and then the Edict of Nantes in 1598, by which the Huguenots received complete religious freedom from Henry IV, first of the Bour-

Splendor, wealth and the establishment

of a colonial empire marked the long reign of Louis XIV from 1643 to 1715. Extravagance, however, forced Louis XVI to struggle with the problem of taxation at a time when the forces of revolution were coming to a head among France's lower and intellectual classes. The French Revolution, of world significance for its impact on absolute rule, broke out in 1789. Louis XVI was deposed in 1792 and executed the next year. Then came the Reign of Terror as the revolution swung to excess, the Directory from 1795 to 1799, and the Consulate from 1799 to 1804, after which Napoleon was proclaimed Emperor. Meanwhile, French armies were engaged on all sides, spreading French hegemony over most of western and central Europe. The final downfall came at Waterloo on June 18, 1815.

The restored Bourbon, Louis XVIII, reigned until 1824 and was succeeded by his reactionary brother, Charles X, who was overthrown in the revolution of 1830. His successor, Louis Philippe, was unseated in 1848, and succeeded by Napoleon's nephew, Louis. Inaugurated President of the Second Republic in 1848, Louis Napoleon became Emperor as Napoleon III in 1852 but abdicated after France's defeat in the Franco-Prussian War of 1870-71. The resultant conflict between republicans and monarchists was resolved by the adoption of a republican Constitution in 1875, which established the Third Republic to replace the provisional republic set up in 1871.

Victorious with the Allies in World War I under Premier Georges Clemenceau, France emerged as the dominant power on the continent. From 1919 on, its aim was to keep Germany weak through a system of military alliances and by maintaining a strong French army.

The effort was a dismal failure. At home France was weakened by economic and political instability, with many short-lived Cabinets. Germany became a dictatorship, with the full national energy bent toward war. The Third French Republic, permitting political freedom, bickered and argued away its years. The leftist "Popular Front" coalition Cabinets of Léon Blum (1936-47) and Camille Chautemps (1937-38) were succeeded by the Radical and Radical-Socialist Cabinet under Édouard Daladier, one of the men of Munich.

Paul Reynaud took Daladier's place on March 21, 1940, less than seven months after the start of World War II. In May 1940, Hitler's armies finally poured into France; and on June 16, the reins of government fell to Marshal Henri Philippe Pétain, who opposed continuation of the war. An armistice with Germany was signed June 22, dividing France into occupied and unoccupied zones. The Third Republic was voted out of existence on July 10 by

the National Assembly at Vichy, and Unoccupied (Vichy) France became totalitarian, with Pétain as Chief of State.

Meanwhile, in London, General Charles de Gaulle had formed on June 18, 1940, a provisional French National Committee, which received British recognition and represented the interests of free Frenchmen. De Gaulle's government-in-exile was moved to Algiers in June 1943 as the French Committee for National Liberation.

After the liberation of Paris, De Gaulle formed a provisional government in the capital on Sept. 10, 1944. It remained in power as a theoretically nonpolitical regime until the elections of Oct. 21, 1945, when a National Assembly was selected to draw up a new Constitution and serve as an interim legislative body. De Gaulle was named provisional President on Nov. 13 but resigned soon after and was succeeded by Félix Gouin, a Socialist, Jan. 23, 1946.

A new Constitution was approved by a slim margin Oct. 13, and the Fourth Republic formally took shape early in 1947 with the election of Socialist Vincent Auriol as President, Jan. 16, and the confirmation of Socialist Paul Ramadier as Premier, Jan. 22.

The ensuing years were marked by a parade of short-lived multiparty Cabinets reflecting the basic French political instability. In the 1951 National Assembly elections, De Gaulle's supporters emerged as the strongest single party; its gains were largely at the expense of the centrist coalition, which had furnished most of the Cabinets since 1946. René Coty was elected

President of the republic on Dec. 17, 1953, to succeed Vincent Auriol.

Edgar Faure, who formed France's 21st post-liberation Cabinet on Feb. 23, 1955, used a rarely-invoked procedure to force dissolution of the Assembly on Nov. 30, 1955. In new elections held Jan. 2, 1956, leftist and rightist extremists scored important victories. Socialist Guy Mollet formed a left-of-center coalition Cabinet on Feb. 1. He was replaced June 17, 1957, by Radical Socialist Maurice Bourgès-Maunoury.

France's economy deteriorated steadily in 1957 despite increases in taxation, reduction in government spending, new import quotas and other measures to halt increasing deficits in foreign exchange. Finally, on Aug. 10, the franc was revalued officially for foreign tourists and traders at 424 to the dollar instead of 350. The government also imposed a 20% subsidy on exports and a 20% tax on most imports.

GOVERNMENT AND DEFENSE. Under the Constitution of 1946, France is a secular, democratic and social republic. The dominant power in the new republic is the National Assembly, whose 627 members are elected for 5 years by universal direct suffrage. There is also a Council of the Republic of 320 members elected by a complicated indirect procedure requiring 8 different elections. This house has only advisory and delaying powers and is definitely subordinate to the Assembly. The two houses together elect the President of the republic for a 7-year term, but his choice of a Premier and the latter's choice of Cabinet ministers require Assem-

bly ratification. All ministers are collectively responsible to the Assembly for the general policy of the Cabinet and are individually responsible for their personal actions. Communists have been excluded from the government since April 30, 1947.

The Assembly elections of Jan. 2, 1956, divided the 627 seats as follows: Communists and affiliates 150; Conservatives (*Paysans*) and affiliates 95; Socialists 94; Popular Republicans 73; Radical Socialists and affiliates 57; French Brotherhood (*Poujadists*) and affiliates 52; Gaullists and affiliates 21; others 53; vacancies and elections pending 32. Several of the *Poujadists* were subsequently disqualified.

GOVERNMENT OF OVERSEAS TERRITORIES. The French Constitution of 1946 provided for establishment of the French Union, consisting of the French Republic (metropolitan France and the overseas departments, territories and trusteeships) and the associated territories and states. The overseas departments are Algeria (four departments), Martinique, Guadeloupe, French Guiana and Réunion.

The overseas departments and territories are represented in the National Assembly by 75 deputies and in the Council of the Republic by 65. In addition the Constitution provided for creation of a High Council, consisting of nominees of the French government and of the associated states, and an Assembly of the French Union, with power that is mainly advisory. The Assembly, which met for the first time on Dec. 10, 1947, consists of 240 delegates, 120 of whom are elected by the French Parliament, 75 by territorial assemblies overseas, and 45 by the associated states.

A *loi-cadre* of June 26, 1956, provided legislation for greater self-government in the overseas territories concerned and empowered the French government to initiate detailed reforms by decree. A series of 13 decrees implementing the law were approved by the French parliament in March 1957.

Defense. French armed forces were believed to total about 700,000 personnel in mid-1957, including the gendarmerie. In Dec. 1956, the navy had 3 light aircraft carriers, 1 escort carrier, 2 battleships, 5 cruisers, 25 destroyers, 57 frigates and escort vessels, 14 submarines and several hundred smaller craft.

SOCIAL AND ECONOMIC CONDITIONS.

Education. State elementary schools in 1953-54 numbered 70,166 with 4,085,738 students. There were also 10,691 private schools with 888,021 students. Students attending higher elementary schools, state and private, totaled 299,069. Pupils attending state secondary schools totaled 529,879; private, 372,974

Higher education is provided chiefly in the universities, of which there are 17, with total enrollment of 155,803 in 1955. The University of Paris is largest, with an enrollment of 62,395 in 1954.

Religion. The predominant faith is Roman Catholicism, but Church and State were separated in 1905. Diplomatic relations with the Vatican were resumed in 1921, and lesser church property was returned to diocesan associations in 1924.

Population. The people are not homogeneous, varying from section to section. During the inter-bellum period, the population remained almost static, with an increase of only 72,133 from 1931 to 1936 and a decrease of 3.3 per cent from 1936 to 1946. The period between 1946 and 1954 showed an increase of 5.6 per cent. The French birth rate also fell sharply (1925: 19.6; 1936-38 annual average: 14.8), but the end of World War II saw an uptrend, and the rate was estimated at 18.3 in 1956.

Agriculture. The national economy of France is predominantly agricultural. Of the total area, approximately 40 per cent is ordinarily devoted to crops, 20 per cent to forests, 3 per cent to vines and two per cent to market and other gardening. The vast majority of holdings are small farms worked by the owners. France normally is almost self-sufficient in basic foodstuffs and leads the world in wine production.

Recent production estimates for major crops (thousands of metric tons):

	1954	1955	1956
Wheat	10,566	10,365	5,695
Rye	514	440	476
Barley	2,525	2,671	6,700
Oats	3,574	3,640	3,761
Potatoes	16,986	15,088	18,330
Sugar beets	10,973	9,805	10,200

Other important crops are berries, fodder beets, fruits, hay, nuts and turnips. Silk culture once thrived in the lower Rhône valley, but production fell sharply between wars. Milk, butter and cheese are important as exports. Livestock in Oct. 1956 included 17,792,000 cattle, 8,355,000 sheep and 7,728,000 hogs. Wine production in 1956 was estimated at 1,400,000,000 U. S. gallons (preliminary).

FRENCH INDUSTRIAL PRODUCTION

Monthly averages in metric tons

Product	1955	1956
Pig iron and ferroalloys	924,000	970,000
Crude steel	1,049,000	1,117,000
Cement	897,000	949,000
Cotton yarn	22,100	23,400
Wool yarn	10,700	11,800
Rayon yarn	4,570	4,460
Electricity	3,894*	4,229*
Manufactured gas	208†	217†
Automobiles	46,110‡	54,040‡

* Millions of kwh. † Millions of cu. m. ‡ Units.

Industry. Principal industrial areas are Paris, Artois, Lower Seine and Lyon; the textile industry is concentrated in the north. Leading manufactures are iron, steel, chemicals, textiles, automobiles, machinery and beet sugar. Industrial production in 1956 was estimated at 133% of the 1953 level.

Trade. Foreign trade statistics, in billions of francs, including the Saar:

	1954	1955	1956
Exports	1,466	1,736	1,623
Imports	1,475	1,674	1,976

Principal suppliers in 1956 were the U. S. (12%), western Germany (10%), Algeria (7%), Britain (5%) and Belgium (5%); leading customers, Algeria (13%), western Germany (10%), Belgium (8%), Switzerland (7%) and Britain (6%). Leading exports were metals and manufactures, textiles and agricultural and food products.

Communications. The French merchant marine had 1,201 ships (100 tons and over) aggregating 3,943,201 gross tons on June 30, 1956, according to *Lloyd's Register*—eighth largest in the world on that date.

There are about 5,500 miles of navigable waterways, including canals, with a traffic of 42,075,000 metric tons in 1953. There are approximately 550 inland navigation ports, of which Paris, Rouen and Strasbourg each normally handle more than one million tons annually (Paris, more than ten million tons). Railway mileage in 1954 totaled 25,600. Railroads were merged in 1938 into the *Société Nationale des Chemins de Fer Français*, of which the government acquired controlling interest. Highway mileage in 1953 was 515,000, including 50,000 miles of national highways. Telephones totaled 3,116,697 on Jan. 1, 1956. Air France, nationalized on Jan. 1, 1946, operates on a world-wide basis.

	1955	1956*	1957*
Revenue	3,553	3,373	3,713
Expenditure	3,956	3,959	4,900

* Budget estimate.

NATURAL FEATURES AND RESOURCES;

CLIMATE. With a maximum length of about 600 miles and a width of 550 miles, France is second in size to Russia among Europe's nations. Its coastline is about 1,950 miles. In the Alps near the Italian and Swiss borders is France's highest point—Mont Blanc, 15,781 feet. The forest-covered Vosges Mountains are in the northeast and the Pyrenees are along the Spanish border. Except for extreme northern France, which is part of the Flanders plain, the country may be described as four river basins and a plateau. Three of the streams flow west—the Seine into the English Channel, the Loire into the Atlantic, and the Garonne into the Bay of Biscay.

The Rhône flows south into the Mediterranean. For about a hundred miles, the Rhine is France's eastern border. West of the Rhône and northeast of the Garonne lies the Central Plateau, covering about 15 per cent of France's area, and rising to a maximum elevation of 6,188 feet. In the Mediterranean, 115 miles east-southeast of Nice, is Corsica, the island of Napoleon's birth, with an area of 3,367 square miles.

Minerals. French coalfields, most extensive in the northeast, ordinarily supply about 70 per cent of domestic needs. Lorraine, Anjou and Normandy have valuable iron ore deposits. Provence has bauxite. Alsace has potash and oil. Limousin has kaolin, zinc, lead and tar.

Production in 1956 (excluding the Saar) included coal, 55,128,000 metric tons; iron ore (metal content 35%), 52,680,000 tons; lead (smelter), 63,360 tons; petroleum, 8,825,000 barrels; potash (K₂O content), 1,499,996 tons.

Forests and Fisheries. France, with more than 26,000,000 wooded acres, produces well over \$100,000,000 worth of forest products in a normal year, including resin, turpentine, timber and nuts. The annual fish catch (522,700 metric tons in 1955) is among the largest in Europe. Cod and sardines are usually the biggest items.

Climate. France's climate is temperate but varies from long cold winters and hot summers in the northeast, to the subtropical temperature of the Mediterranean coast with very mild winters. With no high western elevations to block moisture-laden winds from the Atlantic, all France has adequate rainfall of 20 to 30 inches a year. The mean annual temperature at Paris is 50.5° (36.5° in January and 65.5° in July). The rainiest months are June and October, with February usually the driest.

Andorra

This 191-square mile autonomous and semi-independent state on the Franco-Spanish border has been under the joint suzerainty of the French State and the Spanish bishops of Urgel since 1278. It is a cluster of mountain valleys inhabited by about 6,500 hardy and traditionally independent people whose principal pursuit is the tending of flocks. Catalán is the language spoken, and both French and Spanish currency are in use. Andorra is governed by a Council General of 24 members, elected for four years by the heads of families. A First Syndic, chosen by the Council, constitutes the supreme executive authority.

FRENCH UNION

AFRICA

Algeria (Part of Metropolitan France)

(L'Algérie)

French Minister: Robert Lacoste.

Principal cities (census 1954): Algiers, 355,040 (capital); Oran, 291,812 (seaport); Constantine, 143,334 (trading center); Bône, 112,010 (seaport, phosphates).

Monetary unit: French franc.

Languages: Arabic, French.

Religions: Moslem (natives), Roman Catholic, Jewish.

HISTORY. Algeria, more than three times the size of Texas and situated on the northern bulge of Africa, was of great strategic importance during World War II. After U. S. and British troops occupied it following the landings of Nov. 8, 1942, it became the headquarters of the provisional French government of General Charles de Gaulle until the summer of 1944. For many months during that period it was the headquarters of the Allied Expeditionary Force.

Algeria became a Roman colony after the fall of Carthage in 146 B.C. and was overrun by the Arabs in the 7th, 11th and 12th centuries. In the 13th century it became one of the three kingdoms founded on the ruins of the old Almohade Empire. Following a brief Spanish occupation, it went under Turkish suzerainty in 1518. For 300 years thereafter, Algiers was the headquarters of the notorious Barbary pirates who preyed on Mediterranean shipping. The French ended Turkish rule by taking Algiers in 1830, but it was not until 1847 that they were able to suppress a holy war instigated in 1839 by Abd-el-Kader.

French policy for a time vacillated between complete assimilation of Algeria as part of France, and a decentralized administration under a Governor General. In 1896 the idea of assimilation was abandoned for a number of years. After France fell in 1940, Algerian government officials were loyal to Vichy, but their control was ended by the Allied invasion of Africa in the fall of 1942.

Outbreaks of anti-French terrorism beginning in 1955 required heavy French troop reinforcements.

GOVERNMENT. In effect, Algeria is part of France. Its 12 departments are represented in the French National Assembly, and it is one of the ten military districts of France, with both French and natives subject to military service. The French Minister is a member of the French Cabinet. A statute enacted in Aug. 1947 gave Algeria an elected Legislative As-

sembly, but leadership of the government still remains with the French Minister.

SOCIAL AND ECONOMIC CONDITIONS. Primary and secondary schools for Europeans are on French lines. Most natives do not go beyond the primary grades. The knowledge and use of French has spread widely among the natives, but the teaching of Arabic in all schools was made compulsory in 1946. There is a university at Algiers, with faculties of science, arts, law, medicine and pharmacy.

Approximately 86 per cent of the population is native, 12 per cent French and 2 per cent other European. The native population is Berber, with Arab admixture physically assimilated.

The area under cultivation is about 15,000,000 acres, more than 30 per cent of which is owned by European farmers, chiefly in the fertile coastlands. The principal crops are wheat, barley and oats. Algeria is a leading wine producer, with almost 7 per cent of the cultivated area devoted to vines. Production in 1956 was 475,000,000 U. S. gallons, about 15% above normal. Olive trees are widespread; the average annual yield of oil is about 2,500,000 gallons. Tobacco, corn, vegetables, flax, silk, figs and dates are also produced. Much of the area is more adapted to grazing than to agriculture. In 1954 there were 6,008,000 sheep, 893,000 cattle; (1953) 3,231,000 goats and 183,000 camels.

European industries include those dependent on crops, such as distilling and oil and flour milling, as well as the making of leather, tobacco and matches. There are also small native industries, particularly the traditional carpet weaving.

Exports in 1956 were valued at 150,114,000,000 fr.; imports, at 272,692,000,000 fr. Chief exports were wine (38%), iron ore (6%) and citrus fruits (6%); chief imports, petroleum and products (6%), machinery and apparatus (6%) and motor vehicles (5%). France took 76% of the exports and supplied 80% of the imports.

Algeria has 3,396 miles of railway. A central line runs from the Moroccan to the Tunisian frontier with branches north to all the ports and south into the Southern Territories. There is an excellent network of roads of more than 30,000 miles, and motor transport is well developed, including regular passenger and freight lines across the Sahara. Only French ships may normally trade between France and Algeria.

NATURAL FEATURES AND RESOURCES; CLIMATE. Northern Algeria extends inland for 185 to more than 200 miles. South of it are the big, economically unimportant Southern Territories. Low plains cover small areas near the coast, but 68 per cent of Algeria is a plateau between 2,625 and

5,250 feet above sea level. The region between the Sahara and the Mediterranean reaches a high point of 7,641 feet.

Most of the streams are periodic with the rains. The Chélif is the principal river, over 435 miles long. On the Saharan slopes, the oases or the hot sands absorb the streams as soon as they leave the mountain ridges.

Algeria is a leading producer of phosphates (1955: 763,500 metric tons). Iron ore of good quality (55% metal content) is found near the Tunisian frontier and on the Oran coast (1956: 2,604,000 tons). Zinc, lead and salt are also important minerals; and small amounts of oil and coal are produced.

Rainfall averages 20 to 40 inches on the coast, and decreases to virtually none in the Sahara. On the coast, temperatures average about 52° in winter, 77° in summer. Inland, the winter average is about 40° and summer about 81°, although the Sahara summer average is 95° to 105°.

CAMEROON (FRENCH CAMEROONS)—Status: U. N. trust territory.

Capital: Yaoundé (population 30,000).

High commissioner: Pierre Mesmer.

Premier: André-Marie M'Bida.

Foreign trade (1956): exports, 13,150,000 fr. C.F.A.*; imports, 16,669,000,000 fr. C.F.A. Chief exports: cacao (35%), coffee, bananas, timber, cotton.

Agricultural products: cacao (exports 1956: 30,893 metric tons), coffee, bananas, cotton, rubber, millet, sweet potatoes.

Minerals: tin, gold, rutile.

Forest product: timber.

* Colonies Françaises d'Afrique, equal to 2 metropolitan francs.

In 1884 the Cameroons became a German colony (Kamerun), and after the conclusion of World War I the region was divided as a League mandate between Britain and France, four-fifths of the area going to France. Placed under French trusteeship by the United Nations in 1946, the area has political and financial autonomy under a French High Commissioner, who under the 1957 self-government statute is assisted by a cabinet headed by the premier and responsible to the popularly elected territorial assembly. The chief port is Douala; the administrative center, Yaoundé.

The climate is tropical and unhealthy for Europeans (12,269 in 1951); not even in cool months does the temperature generally fall below 70°. Rainfall is heavy on the coast (155 inches a year at Douala) and is fairly even through the year.

FRENCH EQUATORIAL AFRICA—Status: Group of overseas territories.

High commissioner: Paul Chauvet.

Capital: Brazzaville (pop. 1950: 84,090).

Foreign trade (1956): exports, 14,135,000,000 fr. C.F.A. (64% to France); im-

ports, 20,527,000,000 fr. C.F.A. (57% from France). Chief exports: timber (36%), cotton (33%), coffee, diamonds, peanuts.

Agricultural products: cotton (1956 exports: 37,472 metric tons), coffee, peanuts, cacao, palm kernels and oil.

Minerals: gold, diamonds, lead, iron ore.

Forest products: timber, rubber, copal gum, wax.

This area, an early slaving center, was first settled by France in 1839; French hegemony was subsequently extended by exploration and conquest of the native tribes. The territories declared for Free France following the armistice of June 1940, and Brazzaville became capital of De Gaulle's Free French movement.

The high commissioner co-ordinates the administration of the area with the aid of an elected Grand Council. Each of the four territories (Gabun, Middle Congo, Ubangi-Shari, Chad) has a governor, an executive council and a popularly elected territorial assembly. There were, in 1951, 23,403 Europeans; most of the Africans are Negroes. There are Arab and Fulani settlements in the Chad region, and several Moslem sultanates. Natural resources, both forest and mineral, are vast but relatively unexploited. Once economically dependent on forest products, the country developed after World War II as a producer of cotton, diamonds and gold. The area is capable of exporting large quantities of hard okoumé wood.

The climate is tropical—hot and humid—and the average temperature is about 80° (78° at Brazzaville), varying only slightly throughout the year. Rainfall averages about 60 inches annually, with no marked wet or dry seasons.

FRENCH SOMALILAND—Status: Overseas territory.

Capital: Djibouti (population 31,855).

Governor: René Petitbon.

Foreign trade (1955): domestic exports, 253,000,000 Djibouti fr.*; ship stores, 2,727,000,000 Djibouti fr.; imports (excluding ship stores), 2,324,000,000 Djibouti fr. Chief exports: salt, hides.

Mineral: salt.

* 1 Djibouti franc = 1.64 metropolitan francs.

French Somaliland, at the southern entrance to the Red Sea, was acquired by France between 1883 and 1887 by treaties with the Somali sultans, although posts on the coast had been acquired in 1856. This small, largely arid and sparsely populated region is important chiefly because of the port of Djibouti, the main artery of Ethiopia's trade via the Djibouti-Addis Ababa railway. The area is administered by a Governor, responsible to the French government and assisted by a representative council. In 1955 there were an estimated 3,132 Europeans, 28,000 Somalis, 25,000 Danakils and 6,000 Arabs. The climate is hot to torrid, with irregular rainfall.

French West Africa (Group of Overseas Territories) (L'Afrique Occidentale Française)

High Commissioner: Gaston Custin.

Principal cities (est. 1951): Dakar, 229,200 (capital, chief port); (est. 1953) Abidjan, 160,000 (export center); (est. 1952) Bamako, 100,000 (Niger river port).

Monetary unit: Franc C.F.A. (Colonies Françaises d'Afrique, equal to 2 metropolitan francs).

Languages: French, native tongues.

Religions: Animist (53.4%); Moslem (44.2%); Christian (2.4%).

HISTORY AND GOVERNMENT. The St. Louis Colony, founded in 1626 at the mouth of the Sénégal River, was probably the first permanent white settlement in French West Africa in which the French established themselves, largely for the purpose of pursuing the slave trade. After 1876 the coast settlements were extended steadily into the interior through a series of missionary and economic campaigns. In 1895 the colony of French West Africa was formed under one Governor General by the unification of its various components.

Under 1957 legislation the high commissioner, with the aid of an indirectly elected Grand Council, co-ordinates the administration of the eight constituent territories—Sénégal, French Guinea, Ivory Coast, Dahomey, Haute Volta (re-established in 1947), French Sudan, Mauritania and Niger. Each territory is administered by a governor assisted by an executive council which is responsible to a popularly elected territorial assembly whose powers are deliberative rather than legislative.

The area is represented in the French National Assembly, the Council of the Republic and the Assembly of the French Union.

SOCIAL AND ECONOMIC CONDITIONS. Attendance at elementary schools in 1955 was only about 268,000. There were 12,125 secondary school students and 5,284 technical school students.

No racial unity exists in French West Africa, and there is great variation of physique, manner, custom and language. The population is native except for approximately 63,000 Europeans (1951). Non-Negroid tribes include the Saharans, Moors, Tuaregs and Fulbé.

Agriculture has expanded rapidly in recent years. Millet, rice and maize are the principal food crops, and vegetable oils are a leading commercial product. Peanuts, the chief export crop (1955-56: 938,000 metric tons) are cultivated in Sénégal, and palm kernels and oil are produced in Dahomey and the Ivory Coast. Other products are coffee, cotton, cacao and bananas. Stock raising is important in French Sudan and

Mauritania, relatively dry districts in the northern part of the area. Manufacturing is undeveloped except for small native industries. Expansion is hindered by limited power facilities.

Recent trade statistics are as follows (in millions of francs C.F.A.):

	1954	1955	1956*
Exports	58,264	53,277	59,706
Imports	66,445	67,199	66,789

* Provisional.

Leading exports in 1956 were coffee (28%), peanuts (20%), peanut oil (14%), and cacao (14%). France took 66% of the exports and supplied 65% of the imports.

The middle Niger and lower Sénégal Rivers are navigable, but French West Africa's railways (1955: 2,490 mi.) are more important as interior communications. Dakar, with the best harbor on the west African coast, is the principal port and also an important stop on international air routes between South America and Europe. There are several other good ports.

NATURAL FEATURES AND RESOURCES; CLIMATE. The area, comprising a sixth of Africa, is half as big as Europe; it is generally a plateau broken by two mountain ranges. The Futa Jallon, from 2,300 to 4,900 feet in elevation, parallels the coast for about 430 miles; and Mount Nimba, on the Liberian border, rises 5,250 feet. There are also mountainous regions in the Sahara districts to the north. The Niger, 2,600 miles long, is the principal river.

Important minerals include diamonds, gold, iron ore and bauxite; production of gold has dropped sharply in recent years but large-scale exploitation of iron ore and bauxite deposits is in progress. Iron ore production totaled 847,000 metric tons in 1956; bauxite, 452,000 tons. Timber and precious woods are important, especially in the Ivory Coast.

The central and northern parts of the colony have two seasons, rainy and dry. In the southernmost regions there are two rainy seasons, separated by a short dry season. Average annual rainfall at St. Louis is 16.7 inches; at Dakar, 20.2 inches. Temperatures on the west coast average about 70° in winter and 82° in summer, with daily variation of about 20°.

MADAGASCAR AND DEPENDENCIES—Status: Overseas territory.

Capital: Tananarive (Antananarivo) (census 1951: 182,982).

High Commissioner: André Soucadeaux. Foreign trade (1956): exports, 16,300,000,000 fr. C.F.A. (62% to France); imports, 23,094,000,000 fr. C.F.A. (72% from France). Chief exports: coffee (43%), rice (8%), tobacco (6%).

Agricultural products (exports 1956): coffee (52,486 metric tons), rice (36,172 tons), tobacco (3,783 tons), cloves, sugar,

vanilla, manioc, bananas, maize, coconuts.

Minerals: graphite (exports 1956: 15,401 metric tons), mica, phosphates, gold.

Forest products: gum, medicinal plants, rubber, tannins, dyewoods.

Madagascar, lying off the southeast coast of Africa, is the fourth largest island in the world, with a length of 995 miles and an average width of 250 miles. It remained independent under native rulers until 1885, when it came under French protection. French troops conquered the island in 1895 and it became a French colony the following year. The last native ruler, Queen Rànavàlona III, was exiled. Serious native nationalist outbreaks occurred in 1947.

Under 1957 legislation the high commissioner administers the area with the aid of an Executive Council, which is responsible to the indirectly elected Representative Assembly. The powers of the latter are deliberative rather than legislative. Each of the six provinces has a popularly elected Assembly.

The chief occupations are cattle raising (1955: 6,100,000 cattle) and agriculture; there are several food-processing and textile plants. The chief port is Tamatave on the east coast; the capital, Tananarive, is located on the central plateau. In 1953 there were about 53,000 French and 4,000 other European residents. The natives, collectively known as Malagasy, are divided into several tribes.

Dependencies include the islands of Europa, Juan da Nova, Bassas da India, Glorieuses and various scattered subantarctic islands known as Iles Australes. Under a 1955 law, they and French Antarctica were to be a separate overseas territory.

The Comoro Islands (832 sq. mi.), formerly a dependency, became an autonomous overseas territory effective Jan. 1, 1947, and are represented in the French parliament, although still partly under the authority of French officials in Madagascar. They are located in the Indian ocean at the north entrance of the Mozambique channel, about 300 mi. north of Madagascar. The Comoros consist of four main islands and several islets. The French Administrator is assisted by a Privy Council and an elected General Council. The population is largely Moslem. Exports include essential oils, sisal, vanilla, copra, cacao and cloves.

The climate of Madagascar is generally tropical, with a warm and wet season from November to April and a cool, dry season the rest of the year. Temperatures vary between 55.5° and 95° (at Tamatave, 80° in February, 68° in July). Rainfall varies from about 100 inches annually in the east and northwest to 16 inches in the south.

RÉUNION (Bourbon)—Status: Département of Metropolitan France.

Capital: St. Denis (population 41,163).

Prefect: Perreau Pradier.

Foreign trade (1956): exports, 6,286,000.-000 fr. C.F.A. (73% to France); imports, 8,082,000.00 fr. C.F.A. (68% from France).

Chief exports: sugar (83%), essential oils.

Agricultural products: sugar (exports 1956: 185,086 metric tons), vanilla, coffee, maize.

Discovered by Portuguese navigators in the 16th century, the island, then uninhabited, was taken as a French possession in 1638. It is located about 450 miles east of Madagascar, in the Indian Ocean.

There is no indigenous population. About three-quarters of the inhabitants are of European origin; the remainder are Creoles, mulattoes, Negroes, Indians and other Asiatics. Tropical cyclones of hurricane variety are frequent during the change of seasons. Occasionally a *raz de marée* (tidal wave) does great damage. Temperature varies from about 62° to 78°. Sugar-cane cultivation and the production of rum are the principal occupations.

TOGO—Status: Autonomous republic.

Capital: Lomé (population 35,000).

High commissioner: Jean Bérard.

Premier: Nicholas Grunitzky.

Foreign trade (1956): exports, 2,336,000.-000 fr. C.F.A. (77% to France); imports, 2,673,000.000 fr. C.F.A. (44% from France). Chief exports: coffee (35%), cacao (21%), palm kernels and oil, cotton, copra.

Agricultural products (exports 1956): coffee (6,406 metric tons), cacao (4,555 tons), palm kernels and oil, cotton, copra.

Mineral: iron ore.

Forest products: dyewoods, oil palms.

Togo, a part of the former Slave Coast, lies between the British Gold Coast colony and French West Africa. Established as a German colony in 1884, the area was divided as a League mandate by France and Britain at the end of World War I, with France obtaining two-thirds of the total area. It was placed under U. N. trusteeship in 1946. Its status as an autonomous, self-governing republic within the French Union was approved by a popular referendum in Oct. 1956 but the U. N. withheld recognition.

Under the 1956 constitution France through its high commissioner is responsible for foreign affairs, defense and fiscal matters. The high commissioner names the premier, who with his cabinet is responsible to the popularly elected Legislative Assembly.

The southern half is populated principally by the Ewe and Mina tribes; in the north the population is descended largely from Hamitic tribes. There were 1,300 Europeans in 1954. Agriculture and grazing are the chief industries.

The coastline, only 32 miles long, is low, sandy and without harbors. The Togo Hills traverse the central section.

The coastland climate is hot, humid and unhealthy, with wet seasons lasting from March to June and from September to November. Rainfall is about 55 inches yearly in the south.

Tunisia. See Tunisia

WESTERN HEMISPHERE

FRENCH GUIANA (including ININI)—Status: Département of Metropolitan France.

Capital: Cayenne (population 12,934).

Prefect: Pierre Maloy.

Foreign trade (1956): exports, 293,000,-000 fr. (43% to France); imports, 2,815,-000,000 fr. (69% from France). Chief exports: rum (27%), timber, gold.

Agricultural products: bananas, cacao, corn, manioc, rice, sugar cane.

Mineral: gold (exports 1956: 1,075 troy oz.).

French Guiana, lying north of Brazil and east of Surinam (Dutch Guiana) on the northeast coast of South America, was first settled in 1626. Penal settlements, embracing the area around the mouth of the Maroni River and the Iles du Salut (including Devil's Island), were founded in 1852; they were replaced by refugee camps in the 1940's.

During World War II French Guiana at first adhered to the Vichy government, but the Free French took over in March 1943. The large and scantily populated territory of Inini in the hinterland is administered separately. Economic development is extremely backward; transportation is almost entirely by water, conditions are unsanitary and large quantities of foodstuffs must be imported.

January temperatures average 79°, September and October temperatures 82°.

GUADELOUPE—Status: Département of Metropolitan France.

Capital: Basse-Terre (population 11,430).

Prefect: Guy Malines.

Foreign trade (1956): exports, 10,181,-000,000 fr. (66% to France); imports, 12,-695,000,000 fr. (76% from France). Chief exports: sugar (61%), bananas, rum.

Agricultural products: sugar (exports 1956: 123,287 metric tons), bananas, coffee, cacao, manioc, vanilla.

Manufactures: rum, sugar.

Guadeloupe, lying in the West Indies about 300 miles southeast of Puerto Rico, was discovered by Columbus in 1493. French colonization began in 1635. It consists of two large islands, separated by a narrow arm of the sea, and several outly-

ing smaller islands. Most of the population is Negro and mulatto. The largest city and chief port is Pointe-à-Pitre (population 26,160). About half the cultivated area is devoted to sugar cane. The manufacturing of rum and spirits is the principal industry. Mean annual temperature is 78°. Average annual rainfall is 86 inches on the coast and much higher in the interior.

MARTINIQUE—Status: Département of Metropolitan France.

Capital: Fort-de-France (population 58,-763).

Prefect: Gaston Villéger.

Foreign trade (1956): exports, 9,893,000,-000 fr. (86% to France); imports, 13,179,-000,000 fr. (77% from France). Chief exports: sugar (42%), bananas, rum.

Agricultural products: sugar (exports 1956: 72,138 metric tons), bananas, pineapples, cacao, coffee.

Manufactures: rum, sugar.

Martinique, lying in the Lesser Antilles about 300 miles northeast of Venezuela, was probably discovered by Columbus in 1502 and was taken for France in 1635. Following the Franco-German armistice of 1940 it had a semi-autonomous status under the High Commissioner, Admiral Georges Robert, until 1943, when he relinquished his authority to the Free French. The area, administered by a Prefect assisted by an elected council, is represented in the French legislature. The population is mainly Negro and mulatto. Most of the arable land is devoted to sugar cultivation. Fort-de-France, the capital and chief commercial center, has an excellent harbor. Mean annual temperature of the coast region is 80° (77° in January, 83° in June); annual rainfall is 87 inches.

ST. PIERRE AND MIQUELON—Status: Overseas territory.

Capital: St. Pierre (population 3,997).

Administrator: Pierre Sicaud.

Foreign trade (1956): exports, 195,000,-000 fr. C.F.A. (46% to the U. S.); imports, 644,000,000 fr. C.F.A. (51% from Canada). Chief export: fish and products.

The sole remnant of the French colonial empire in North America, these islands were first occupied by the French in 1660. Their only importance arises from proximity to the Grand Banks (10 mi. south of Newfoundland) making them the center of the French Atlantic cod fisheries.

ASIA

Indo-China

HISTORY. Indo-China, at the southeast corner of Asia, first met the West in the 16th century, when Portuguese traders and missionaries arrived.

French influence dates from 1787, and in the 19th century France received preferential treatment for helping the Emperor

of Annam recover his throne. During the last half of the century, France gradually extended influence over all Indo-China.

Until the beginning of World War II, Indo-China was an administrative federation of one colony—Cochin-China; four protectorates—Annam, Tongking, Cambodia and Laos; and a special territory—Kwangchow (returned to China in 1945). These had various degrees of native rule, but the real administrator of each unit was the French Chief Resident.

After France fell in 1940, Vichy authorized the entry of Japanese troops, and the country became one of the springboards for the Japanese campaign against Singapore. When, in March 1945, the Japanese seized control of the whole country, Annam and Cambodia declared their independence. After the Japanese surrender, British and Chinese troops occupied Indo-China in the face of a growing nationalist movement, and restored order for the French authorities, who assumed control officially on March 4, 1946.

French postwar plans for a federation of Indo-China were thwarted by a Communist-led nationalist revolt which erupted in Dec. 1946 and continued until July 1954. In the course of it, the rebels (called Vietminh) extended their control to most of Vietnam (Tongking, Annam and Cochin-China) outside large urban centers and invaded Laos and Cambodia.

Amid the hostilities, Vietnam, Cambodia and Laos were recognized as independent states within the French Union.

The conflict was ended by armistice agreements signed at Geneva, Switzerland, on July 21, 1954, under which Vietnam was cut about in half along the 17th parallel, the northern part going to the Vietminh.

(See separate articles on Vietnam, Cambodia and Laos).

OCEANIA

FRENCH PACIFIC SETTLEMENTS—Status: Overseas territory.

Governor: Jean Toby.

Capital: Papeete, on Tahiti (population 1951: 15,214).

Foreign trade (1956): exports, 659,000,000 fr. C.F.P.* (52% to France); imports, 676,000,000 fr. C.F.P. (30% from the U. S., 30% from France). Chief exports: phosphate (33%), copra, vanilla.

Agricultural products: copra (exports 1956: 20,000 metric tons), sugar, vanilla, tobacco.

Mineral: phosphate (1956 exports: 264,926 metric tons).

* Colonies Françaises du Pacifique, equal to 5½ metropolitan France.

The term French Pacific Settlements is applied to the scattered French possessions in the eastern Pacific—Mangareva (Gam-

bier), Makatea, Marquesas Islands, Rapa, Rurutu, Rimatara, Society Islands, Tuamotu Archipelago, Tubuai and Raivavae—which were organized into a single colony in 1903. The appointed Governor is assisted by a Privy Council and a popularly elected Representative Assembly. The principal and most populous island—Tahiti, in the Society group (pop. 1951: 30,500)—was claimed as French in 1768. The natives are mostly Polynesians.

NEW CALEDONIA AND DEPENDENCIES—Status: Overseas territory.

Capital: Nouméa (population 20,000).

Governor: Aimé Grimald (also French High Commissioner in the Pacific).

Foreign trade (1956): exports, 1,982,000,000 fr. C.F.P. (67% to France); imports, 2,105,000,000 fr. C.F.P. (45% from France). Chief exports: nickel (87%), chromite, coffee.

Agricultural products: coffee, copra, corn, cotton, manioc, rice, tobacco.

Minerals (1956): nickel (6,920 metric tons, matte), chromite (49,190 tons), iron ore.

Sea product: mother-of-pearl.

New Caledonia (6,533 sq. mi.), lying about 1,070 miles northeast of Sydney, Australia, was discovered by Captain James Cook in 1774 and annexed by France in 1853. The government, in the hands of an appointed Governor and an elective Council, also administers the Isle of Pines, the Wallis Archipelago, the Loyalty Islands, the Chesterfield Islands, Walpole, the Huon Islands, Futuna and Alofi, with a total area of 1,121 square miles. The area—taken over in the summer of 1940 by the Free French after a bloodless revolution—is one of the richest of the Pacific islands in mineral resources, particularly nickel and chrome ore. The natives are Melanesians; about one-third of the population is white and one-fifth Indo-Chinese and Javanese. A French penal colony was established in the 19th century. Average temperature on New Caledonia varies between 65° and 72°.

NEW HEBRIDES—Status: Anglo-French condominium.

Capital: Vila (population 1,200).

Foreign trade (1956): exports, 268,117,000 fr. C.F.P.; imports, 195,332,000 fr. C.F.P. Chief exports: copra (80%), cacao.

Agricultural products: coconuts, cacao, coffee.

Sea products: trochus and burghaus shell.

The New Hebrides, under joint Anglo-French administration since 1914, lie northeast of New Caledonia. The islands, about 40 in number, joined the Free French movement after a plebiscite in July 1940. Most of the natives are Melanesians of mixed blood; there were 350 British and 1,300 French in 1952. The largest island is Espiritu Santo (875 sq. mi.). The French and British high commissioners in the Pacific are represented by resident commissioners.

GERMANY

HISTORY. In Caesar's time, the territory that is now Germany was inhabited by barbarous tribes that came originally perhaps from Central Asia. One of these Germanic tribes, the Franks, attained supremacy in western Europe under Charlemagne, who was crowned Holy Roman Emperor in A.D. 800. By the Treaty of Verdun (843), Charlemagne's lands east of the Rhine were ceded to the German Prince Louis. Additional territory acquired by the Treaty of Mersen (870) gave Germany approximately the area she maintained throughout the Middle Ages. For several centuries after Otto the Great was crowned King in 936, the German rulers were also usually heads of the Holy Roman Empire.

Relations between State and Church were changed by the Reformation, which began with Martin Luther's 95 theses, and came to a head in 1547, when Charles V scattered the forces of the Protestant League at Mühlberg. Freedom of worship was obtained by the Peace of Augsburg (1555), but a Counter Reformation took place later, and a dispute over the succession to the Bohemian throne brought on the Thirty Years' War (1618-48) which devastated Germany and left the empire divided into hundreds of small principalities virtually independent of the Emperor. Meanwhile, Prussia was developing into a province of considerable strength. Frederick the Great (1740-86) reorganized the Prussian army and defeated Maria Theresa of Austria in a struggle over Silesia. The conflict with revolutionary France hastened the disintegration of the empire, and in 1806 Francis II of Austria laid down the Imperial German crown. After the defeat of Napoleon at Waterloo (1815), the struggle between Austria and Prussia for supremacy in Germany continued, reaching its climax in the defeat of Austria in the Seven Weeks' War (1866) and the formation of the Prussian-dominated North German Confederation (1867).

At the close of the victorious war with France (1870-71), William I, King of Prussia, was crowned Emperor of Germany (Jan. 18, 1871). Under the guidance of the Imperial Chancellor, Prince Bismarck, Germany took a new place in world affairs, at the same time expanding her foreign trade and home industry rapidly. The Triple Alliance was formed with Austria and Italy in 1882. However, upon the accession of William II (1888-1918), Bismarck was dismissed and Russia was alienated. International rivalry was intensified in the early years of the 20th century, culminating in World War I, in which Germany, supporting Austria-Hungary's demands on Serbia, suffered final defeat. By the terms of the Treaty of Versailles (1919) Germany

lost about 27,000 square miles of territory, including all her colonies, plus Alsace-Lorraine, northern Schleswig, Eupen-Malmédy, Upper Silesia, and considerable areas in the east. William II had abdicated (Nov. 9, 1918), and a federal republic was organized under the Constitution adopted at Weimar in 1919. The Constitution was attacked by both the Right and Left; several Communist uprisings took place in the early 1920s, and in 1923 Adolf Hitler's abortive putsch was defeated. Germany's inability to fulfill the heavy reparations demands stipulated by the Treaty of Versailles led to French occupation of the Ruhr (1923-25). National bankruptcy was avoided by adoption of the Dawes Plan (1924) and later the Young Plan.

The chancellorship of Brüning, leader of the Catholic Center party (1930-32), saw increasing economic and financial distress and the practical cessation of reparations payments. Hitler's rising National Socialist party won a plurality in both the July and November Reichstag elections in 1932, but not until the failure of Franz von Papen and Kurt von Schleicher to form governments did President Hindenburg name Hitler Chancellor (Jan. 30, 1933). With the death of Hindenburg in 1934, Hitler became complete master of Germany, which he rapidly converted into a totalitarian state under the aegis of the Nazi party. All other political parties were banned, and the Jews were subjected to severe persecution. Through his foreign policy, Hitler repudiated the Treaty of Versailles and began full-scale rearmament. In 1935 he withdrew from the League of Nations, and in 1936 he reoccupied the Rhineland and signed the anti-Comintern pact with Japan, at the same time strengthening relations with Italy. Austria was annexed in March 1938. By the Munich agreement (Sept. 1938) he gained the Czech Sudetenland, and in violation of this agreement he completed the dismemberment of Czechoslovakia in March 1939. But his invasion of Poland on Sept. 1, 1939, precipitated British and French declarations of war.

On May 8, 1945, Germany surrendered unconditionally to Allied and Soviet military commanders, and on June 5 the four-nation Allied Control Council became the *de facto* government of Germany.

At the Berlin (or Potsdam) Conference (July 17-Aug. 2, 1945) President Truman, Stalin and Prime Minister Attlee set forth the principles by which the Allied Control Council was to be guided. They were: Germany's complete disarmament and demilitarization; destruction of its war potential; rigid control of industry; decentralization of the political and economic structure. Pending final determination of territorial questions at a peace conference, the three victors agreed in principle to the ultimate

transfer of the city of Königsberg (now Kaliningrad) and its adjacent area to the Soviet Union and to the administration by Poland of former German territories lying generally east of the Oder-Neisse line.

For purposes of control, Germany was divided in 1945 into four national occupation zones, each headed by a Military Governor, assisted by appropriate supervisory and operating staffs.

Efforts to unify Germany were totally unsuccessful, and the western powers were unable to agree with the U.S.S.R. on any fundamental issue. Work of the Allied Control Council was hamstrung by repeated Soviet vetoes; and finally, on March 20, 1948, the U.S.S.R. walked out of the Council. Meanwhile, the U. S. and Britain had taken steps to merge their zones economically (Bizonie); and on May 31, 1948, the U. S., Britain, France and the Benelux countries agreed to set up a German state comprising the three western zones. At the same time the western powers introduced a new German currency.

The Soviet Union replied to these measures by clamping a blockade on all ground communications between the western zones and Berlin. The western Allies, refusing to be driven out of the capital, immediately organized a gigantic airlift to fly supplies into the beleaguered city. Before the Russians were finally forced to lift the blockade on May 12, 1949, 60,000 men were engaged in the airlift.

In return for lifting the blockade, the U.S.S.R. asked only that the Big Four Foreign Ministers meet again to discuss German unification. The conference, meeting in Paris from May 23 to June 20, 1949, ended as usual in a deadlock.

The Big Four Foreign Ministers met once more at Berlin from Jan. 25 to Feb. 18, 1954, again without success. No progress toward German reunification was made thereafter.

German Federal Republic

Area: 94,719 square miles.*

Population (est. Sept. 1956): 50,595,000 (predominantly German).

Density per square mile: 534.2.

President: Theodor Heuss.

Chancellor: Konrad Adenauer.

Principal cities (est. 1953): Hamburg, 1,658,000 (chief port); Munich, 870,000 (Bavarian capital); Cologne, 629,200 (transportation center); Essen, 624,100 (steel center); Frankfurt am Main, 564,400 (manufacturing); Bonn, 130,000 (capital).

Monetary unit: Deutsche Mark (Dm.).

Language: German.

Religions (census 1950): Protestant, 52.2%; Roman Catholic, 43.8%; others, 4.0%.

* Excluding west Berlin.

The German Federal Republic came into formal existence on Sept. 21, 1949, when the Allied High Commission turned over

to it the administration of the U. S., British and French zones of occupation. On May 8, 1949, the constituent assembly at Bonn had approved a Basic Law or Constitution for western Germany; it came into force on May 23, after approval by the *Landtage* of the 11 constituent *Länder*. Parliamentary elections were held on Aug. 14; and on Sept. 12, Free Democratic leader Theodor Heuss was elected President of western Germany. On Sept. 15, the *Bundestag* confirmed his appointment of Konrad Adenauer, leader of the Christian Democratic party, as Chancellor. His party won a sweeping victory in parliamentary elections held Sept. 6, 1953. Heuss was re-elected President on July 17, 1954.

GOVERNMENT. With the coming into force on May 5, 1955, of a series of agreements signed at Paris on Oct. 23, 1954, the Allied occupation came to an end and the Federal Republic attained full sovereignty and independence. The Paris agreements followed the rejection by France of an agreement signed May 27, 1952, creating within NATO a European Defense Community. Under the 1954 agreements, Germany and Italy became members of the Brussels treaty organization created in 1948 and renamed the Western European Union. Germany also became a member of NATO.

The Basic Law or Constitution of the republic provides for a federal form of government headed by a President elected every 5 years by a Federal Convention. The Parliament consists of a *Bundestag* whose members are elected every 4 years by popular vote and a *Bundesrat* whose members are appointed by the *Länder* governments. Actual executive power is in the hands of the Cabinet, answerable to the *Bundestag* and headed by a Chancellor appointed by the President, subject to the right of the *Bundestag* to elect a Chancellor of its own preference. Provision was made for the accession of *Länder* in the Soviet zone. Each of the 10 constituent *Länder* must have a republican form of government with an assembly which is elected by universal suffrage.

The party standing in the *Bundestag* (elections of Sept. 6, 1953) was as follows: Christian Democrats 244, Social Democrats 151, Free Democrats 48, All-German 27; others 17.

One of the 1954 Paris agreements authorized the U. K., the U. S. and France to keep troops in western Germany, not as occupation troops but in view of the "need to ensure the defense of the free world." A protocol specified that German federal armed forces would not exceed the numbers fixed in the EDC treaty of May 27, 1952—i.e., 12 divisions, a tactical air force of about 1,350 aircraft and light coastal defense and escort vessels. Under

the Paris agreements relating to NATO, all forces of NATO countries stationed on the continent of Europe, including those of Germany, are with certain exceptions under the authority of the Supreme Allied Commander, Europe.

SOCIAL AND ECONOMIC CONDITIONS.

Education. Education is compulsory between the ages of 6 and 14. In May 1955 there were 29,465 elementary schools with 4,636,470 pupils, 806 higher elementary schools with 323,409 pupils, 1,572 secondary schools with 775,320 pupils, 487 all-age schools (Hamburg and Bremen) with 299,633 pupils and 17 universities with 88,336 students.

Agriculture. Agriculture is characterized by mixed farming, the climate and the soil permitting cultivation of a variety of crops and most types of livestock. Rye and potatoes are staple crops in the north; grains and sugar beets in the central regions. The northwestern and southern areas are noted for dairying, while the west is the chief fruit- and wine-producing region. The soil is generally poor, and high crop yields are dependent upon large-scale use of fertilizers.

Production data for western Germany (excluding the Saar) are as follows (provisional, in thousands of metric tons):

	1954	1955	1956
Wheat	2,893	3,378	3,487
Rye	4,098	3,495	3,735
Barley	1,920	2,079	2,310
Oats	2,473	2,477	2,451
Potatoes	26,769	22,874	26,756
Beet sugar	1,316	1,297	1,155

In Dec. 1956, western Germany (excluding the Saar) had 11,814,610 cattle, 1,024,898 horses, 14,407,465 hogs and 1,145,465 sheep.

Western Germany is not self-sustaining in food. Difficulties stem to a considerable extent from the fact that Poland now controls the area east of the Oder-Neisse, which contained 28 per cent of prewar Germany's arable land and produced about 25 per cent of its food.

Industry. Western Germany's industry is well-developed and highly diversified. It accounted for about two-thirds of Germany's prewar industrial production and for a large part of iron and steel production. In Dec. 1956, employment in industry was 18,003,000; there were 1,089,000 unemployed.

Production for western Germany (monthly averages, in thousands of metric tons):

	1954	1955	1956
Pig iron and ferroalloys	1,048	1,381	1,474
Crude steel	1,453	1,778	1,932
Cement	1,357	1,564	1,638
Cotton yarn	30.77	31.07	33.02
Wool yarn	8.77	9.55	9.82

Automobiles	43.18*	58.79*	70.65*
Electrical energy	5,656†	6,315†	7,022†
Manufactured gas	1,503‡	1,738‡	1,868‡

* Thousands of units. † Millions of kwh. ‡ Millions of cu. m.

Shipbuilding has regained its former prominence; on Dec. 31, 1956, 240 ships aggregating 798,772 gross tons were under construction. Industrial production in 1956 was 140% of the 1953 level.

Western Germany is a member of the European Coal and Steel Community, which commenced activities on Aug. 10, 1952. It has jurisdiction over the production and allocation of coal and steel by its member nations.

Trade. Recent foreign trade data for the area which now comprises the republic are as follows (in millions of Deutschemarks, including west Berlin):

	1954	1955	1956*
Exports	21,980	25,702	30,848
Imports	19,210	24,353	27,779

* Provisional.

Leading customers in 1956 were the Netherlands (9%), France (8%), Belgium (7%), the U. S. (7%) and Sweden (7%); leading suppliers, the U. S. (14%), France (7%), the Netherlands (7%), Belgium (4%) and Sweden (4%). Leading exports included machines (18%), vehicles (9%), electrical machinery and apparatus (8%), iron and steel products (5%) and coal (3%); leading imports, coal (5%), copper (4%), iron ore (4%), cotton (4%) and wheat (3%).

Communications. In 1954, the western German rail network had a total length of 21,900 miles, all publicly owned. Highway mileage in 1955 was 80,260.

On July 1, 1954, the west German merchant fleet aggregated 2,227,195 gross tons. The principal seaports of western Germany are Hamburg and Bremen.

Inland waterway transportation is of great importance; navigable waterways and canals total 2,650 miles. Over half the traffic is carried on the Rhine River, which links the Ruhr area with Belgian and Dutch ports.

Shipping on the Rhine is controlled by the Central Commission of the Rhine—an international body composed provisionally of U. S., British, French, Swiss, Dutch and Belgian representatives—which was reconvened in October 1945.

Finance. Recent data are as follows (in millions of Deutschemarks):

	1955-56*	1956-57†	1957-58†
Revenue	26,726	27,453	28,827
Expenditure	23,867	32,662	32,186

* Cash results. † Budget estimate.

NATURAL FEATURES AND RESOURCES; CLIMATE. The northern plain, the central hill country and the southern mountain district constitute the main physical divisions of western Germany. The Bavarian plateau in the southwest averages 1,600 feet above sea level, but it reaches 9,721 feet in the Zugspitze, the highest point in Germany.

There are several important navigable rivers. In the south the Danube, rising in the Black Forest, flows east across Bavaria into Austria. The other important rivers flow north. The Rhine, which rises in Switzerland and flows across the Netherlands in two channels to the North Sea, is navigable by smaller ocean-going vessels as far as Cologne. The Rhine and the Elbe, which also empties into the North Sea, are navigable within Germany for ships of 400 tons. The Weser, flowing into the North Sea, and the Main and Mosel (Moselle), both tributaries of the Rhine, are also important.

Minerals and Forests. Aside from rich deposits of coal and potash, western Germany's mineral wealth is not considerable. The Ruhr, Krefeld and Aachen districts constitute one of the world's greatest coal mining regions, with total reserves estimated at 65,000,000,000 tons. Production in this area is handicapped by the prevalence of thin seams, but distribution is favored by easily accessible natural waterways and efficient canals. Known petroleum resources are meager, and supplies of iron ore, copper, lead and zinc are insufficient for domestic needs. Mineral production (excluding the Saar) was as follows in 1956: coal, 134,407,000 metric tons; lignite, 95,233,000 tons; iron ore (metal content 30%), 16,928,000 tons; potash (K_2O content), 1,965,000 tons.

About 23 per cent of the total area of western Germany is covered by commercial forests, which yield timber as well as material for paper, wood fiber, cellulose and other products.

Fishing is an essential part of the economy. In 1956 coast and sea fisheries yielded 695,052 metric tons valued at Dm. 263,334,000. Herring are the most important.

Climate. The climate of western Germany is intermediate between the oceanic climate of western Europe and the continental climate farther east. The average summer temperature is 60° to 62°. The sheltered mountain valleys of the south enjoy a more temperate climate, especially the valley of the Rhine above Mainz. Rainfall is heaviest in the south and west (over 30 inches).

German Democratic Republic

Area: 41,380 square miles.*

Population (est. 1955): 16,500,000* (predominantly German).

Density per square mile: 398.7.

Soviet High Commissioner: G. M. Pushkin.

President: Wilhelm Pieck.

Premier: Otto Grotewohl.

Principal cities (est. 1953): Leipzig, 607,700 (trading, publishing center); Dresden 510,100 (railway center, Elbe port); Karl-Marxstadt (Chemnitz), 298,500 (textiles); Halle am der Saale, 278,400 (railway center); Magdeburg, 252,300 (iron and steel products).

Monetary unit: Ostmark.

Religions (census 1946): Protestant, 81.3%; Roman Catholic, 12.1%; others, 6.6%.

* Excluding east Berlin.

HISTORY AND GOVERNMENT. The so-called German Democratic Republic comprises the Soviet zone of occupation of eastern Germany. It was proclaimed on Oct. 7, 1949, with its seat at Berlin, on the basis of a Constitution adopted May 30, 1949, by a People's Congress chosen under a plebiscite arrangement in elections held in the Soviet zone and eastern Berlin on May 15 and 16, 1949. The Congress elected a People's Council (*Volksrat*) which was transformed on Oct. 7 into a provisional People's Chamber (*Volkskammer*). A Chamber of the States (*Länderkammer*) was nominated on Oct. 10, and on Oct. 11 both chambers elected Communist-leader Wilhelm Pieck as President of the republic and Otto Grotewohl as Minister-President or Premier. The Constitution is soviet in nature and the government is under complete Communist domination. Soviet government supervision is exercised by the Soviet High Commissioner.

The republic lies largely between the Elbe and Oder rivers, including most of Brandenburg, Mecklenburg and the industrial Saxon and Thuringian lands.

SOCIAL AND ECONOMIC CONDITIONS. About 22 per cent of the population is engaged in agricultural pursuits and the area is almost self-sufficient in foodstuffs. Postwar yields have, however, suffered from droughts and shortages of fertilizers. Recent production estimates are as follows (in thousands of metric tons):

	1954	1955	1956
Wheat	1,140	1,273	1,107
Rye	2,582	2,464	2,334
Potatoes	16,473	16,750	
Beet sugar	815	713	670

In Dec. 1955 there were approximately 3,760,000 cattle, 1,807,000 sheep and 9,029,000 hogs.

Most of the industrial establishments, particularly in heavy industry, have been nationalized. The area accounted for 26 per

cent of prewar Germany's industrial production, ranking first in textiles, paper and pulp and ceramics and glass (especially optical glass produced by the famous Jena works). A Two-Year Plan inaugurated in 1949 had the object of raising the volume of production to 81 per cent of the 1936 level by the end of 1950, while a Five-Year Plan initiated in 1951 aimed at doubling the 1936 level by 1955. Unofficial production data for 1955 are as follows: pig iron (1,520,000 metric tons), raw steel (2,500,000 tons), cement (2,950,000 tons).

Foreign trade is carried on through government-owned trading companies. Trade is confined largely to Europe. Important imports include foodstuffs, minerals and textiles; exports include machinery, engineering equipment and chemicals.

Railways, highways and inland waterways were reported in 1957 still inadequate to meet the demands of the area's economy. The rehabilitation and expansion of transport facilities was emphasized in connection with the Two- and Five-Year Plans.

The 1955 budget balanced revenue and expenditure at 38,100,000,000 ostmarks.

NATURAL RESOURCES; CLIMATE. The area is not rich in minerals. It has only minor deposits of coal (1955 production: 3,500,000 metric tons) and deposits of iron ore are scanty and of low quality (1955: 1,700,000 tons). It does have important deposits of lignite (1955: 200,000,000 tons) and crude potash (1955: 1,571,000 tons).

Most of the area is part of a low plain. The climate is temperate for the most part but with more difference between summer and winter than in western Germany. Rainfall averages 20 to 30 inches annually.

Berlin

Area: 341.2 square miles.

Population (est. 1955): 3,300,000.

Berlin, the capital of prewar Germany, is surrounded by the German Democratic Republic. It is occupied by the forces of the U. S., the U. K., France and the U.S.S.R., each having its own sector of occupation. The three western sectors contain 55% of the area and about two-thirds of the population.

The supreme authority in western Berlin is a tripartite Kommandatura which has responsibility for the exercise of the powers reserved to the occupation forces under the Berlin Charter, a document analogous to the former west German Occupation Statute. With the termination of the Allied occupation of western Germany, Allied controls were substantially relaxed.

Other powers of government are exercised by a City Assembly elected by popular vote and a *Magistrat* (city council) chosen by the Assembly.

Supreme authority in the eastern sector of Berlin is exercised by the Soviet High Commissioner. Powers not exercised by him or by the German Democratic Republic are vested in a "rump" city government, which proclaimed itself in power Nov. 30, 1948. Major anti-Communist riots broke out in east Berlin in June 1953.

The Saar

Area: 991 square miles.

Population (est. 1955): 996,000.

Density per square mile: 1,005.0.

Premier: Egon Reinert.

Principal city: Saarbrücken (est. pop. 116,395).

Monetary unit: French franc.

The Saar is an industrial and mining region lying on Germany's western frontier north of Lorraine. Under the Treaty of Versailles it was detached from Germany and placed under the administration of the League of Nations, its coal mines being transferred to France. It voted in Jan. 1935 for reunion with Germany.

Part of the French zone of occupation after World War II, the Saar was politically united with western Germany as one of its constituents on Jan. 1, 1957, under a Franco-German agreement of June 4, 1956, and was to be economically integrated into western Germany by 1960. One of the 1954 Paris agreements provided for the so-called Europeanization of the Saar, but this proposal was rejected by the people in a referendum Oct. 23, 1955. Subsequent Diet elections returned a pro-German majority. Under the Saar's Constitution it had a popularly elected Diet of 50 members, to which the Cabinet headed by the Premier was responsible. There was no head of state as such.

Coal reserves are conservatively estimated at 9,000,000,000 metric tons. Under an agreement concluded with France on Mar. 3, 1950, the mines are under French management with some Saar participation, an annual royalty being paid to the Saar by France. Production in 1956 included 17,088,000 metric tons of coal, 3,372,000 tons of raw steel and 3,036,000 tons of pig iron and ferroalloys.

Greece (Kingdom)

(Hellas)

Area: 51,182 square miles.*

Population (est. 1956): 8,031,000.* (1940, excluding the Dodecanese Greek, 92.8%; Turkish, 3.8%; Macedonian, 1.3%; Spanish, 1%; others, 1.1%.)

Density per square mile: 156.9.*

Sovereign: King Paul I.

Premier: Konstantinos Karamanlis.

Principal cities (census 1951, municipal areas only): Athens, 565,084 (capital); Salonika, 217,049 (seaport); Piraeus, 186,014 (port of Athens); Patras, 79,014 (seaport); Volos, 51,144 (seaport).

Monetary unit: Drachma.
 Languages: Greek, Turkish.
 Religions: Greek Orthodox, 96%; Mohammedan, 2%; Jewish, 1.1%; others, .9%.

* Including the Dodecanese.

HISTORY. Greece, with a recorded history going back to 776 B.C., reached the peak of its glory in the 5th century B.C., and by the middle of the 2nd century B.C., it had declined to the status of a Roman province. It remained within the Eastern Roman Empire until Constantinople fell to the Crusaders in 1204. In 1453, the Turks took Constantinople, and by 1460 Greece was a Turkish province. The insurrection made famous by the poet Lord Byron broke out in 1821, and in 1827 Greece was set up an independent nation, with sovereignty guaranteed by Britain, France and Russia. Prince Otto of Bavaria was recognized as King five years later, but he was ousted by a revolution in 1862. Prince William of Denmark, as George I, succeeded him.

Up to this time Greece consisted only of the Peloponnesus and the lower part of the peninsula north of the Gulf of Corinth. Britain gave Greece the Ionian Islands in 1864, and Thessaly was added in 1881. Greek success in the Balkan Wars of 1912-13 brought the addition of Macedonia, Epirus, Crete and many Aegean Islands. In World War I, Greece kept a precarious neutrality until June, 1917, when King Constantine (who had succeeded George I in 1913) was forced to abdicate in favor of his second son, Alexander. Greece then entered the war on the Allied side. By the Treaty of Sèvres, Greece was awarded Thrace and part of Asia Minor. Turkey, however, drove the Greeks out of Smyrna in 1922.

Greece was proclaimed a republic on March 25, 1924, and there followed strife and dissension between Royalists and Republicans, although fair order was maintained during the premierships of Eleutherios Venizelos from 1928 to 1933.

In 1935, the people voted for the return of King George II, who had abdicated in 1924 after a short rule. In April 1936, General John Metaxas became Premier and by August he had abolished Parliament and set up a dictatorship.

Greece was invaded by the Italians in 1940. By April 1941, the Greeks not only had driven the Italians out of Greece but were well into Albania. The Germans came to Mussolini's rescue, invaded Greece from Bulgaria, and took Athens on April 27, 1941. Starvation and harsh persecution of the Greeks were common during the Axis occupation. After liberation, Greece became a land of conflict with armed bands of Royalists and Communists terrorizing the nation. The government, which had fled the country, returned in Oct. 1944, following Greece's liberation by British

forces. Five years of civil war followed, with government troops fighting Communist-led guerrillas, who were aided by the neighboring Communist satellites of the Soviet Union.

The country approved the return of George II by a large majority in a plebiscite held Sept. 1, 1946. The King returned on Sept. 28 but died April 1, 1947. He was succeeded by his brother Paul I.

An important postwar development in troubled Greece was the extension of U. S. financial and technical assistance, supervised by a U. S. mission. Greek forces thus were able to make good progress against the Communist guerrillas, and the cessation of hostilities was announced on Oct. 16, 1949.

Elections held on Nov. 16, 1952, resulted in a sweeping victory for the Greek Rally party, which won 239 out of the 300 seats in the national assembly. Field Marshal Alexander Papagos, its leader, became Premier on November 18, 1952. On his death Oct. 4, 1955, Konstantinos Karamanlis became Premier. The Greek Rally lost ground in elections Feb. 19, 1956, but retained its majority.

Greece was admitted to NATO in 1951 and signed a defensive alliance with Turkey and Yugoslavia in 1953.

GOVERNMENT AND DEFENSE. Greece is a constitutional hereditary monarchy. Nominal executive power is vested in the King, but the government is administered by a Council of Ministers, headed by the Premier, which must enjoy the Assembly's confidence.

Military service is compulsory. U. S. aid in 1948 made possible an increase in army strength from 120,000 to 132,000; the National Guard was also increased from 30,000 to 50,000. Greek forces, which were advised by a U. S. military mission, were demobilized to some extent following the cessation of hostilities with the guerrillas in Oct. 1949. An infantry unit of 1,000 men and several aircraft were dispatched to Korea. In Dec. 1956, the navy had one cruiser, 2 fleet destroyers, 4 submarines and 19 frigates and escort craft.

SOCIAL AND ECONOMIC CONDITIONS. Education is compulsory for all children between the ages of 6 and 14. Illiteracy was estimated at 23.5% in 1951. In 1954 there were 9,368 elementary schools with 943,722 pupils, 425 secondary schools with 196,207 pupils and 2 universities (located at Athens and Salonika), with (1953) 6,658 students.

About three-quarters of the population engages in agricultural pursuits, although only one-fifth of the land is arable. Most of the cultivated area is devoted to cereals: wheat (1956: 1,270,000 metric tons), barley (254,000 tons) and maize (234,000

tons). There are also olive trees, vines, tobacco (1955: 97,400 tons) and currants. Olive oil production in 1956 was about 153,000 tons. The principal fruits are oranges, lemons, figs, mandarins, apples and pears. In Dec. 1955, there were 957,000 cattle, 8,970,000 sheep and 621,000 hogs. Wool production in 1956 was about 6,000 metric tons (clean basis).

Development of large-scale Greek manufacturing is blocked by lack of coal resources and of capital. The most valuable products are textiles, chemicals and food items. Among other processed or manufactured products are olive oil, wine, spirits, flour, carpets, leather, cigarettes and building materials.

Postwar trade has been financed largely by U. S. aid. Recent figures are as follows (in millions of U. S. dollars):

	1954	1955	1956
Exports	152	183	190
Imports	330	382	464

Leading customers in 1956 were western Germany (20%), France (13%) and the U. S. (12%); leading suppliers, the U. S. (17%), western Germany (16%) and Britain (14%). Leading exports were tobacco (34%) and currants and raisins (16%).

The merchant marine plays a vital part in the national economy. On June 30, 1956, it totaled 347 ships (100 tons and over) aggregating 1,307,336 gross tons, according to *Lloyd's Register*.

Railway mileage in 1955 totaled 1,678; highway mileage in 1953 was 14,221. Reconstruction of the Greek transport system, financed by U. S. aid, was completed in 1949; it included extensive work on highways, port and dry-dock facilities, railways and bridges.

The budget for the prolonged fiscal year 1956-57 (July 1, 1956-Dec. 31, 1957) estimated revenue at 17,227,000,000 drachmas and expenditure at 20,325,000,000 drachmas.

NATURAL FEATURES AND RESOURCES; CLIMATE. North central Greece, Epirus and western Macedonia all are mountainous. The main chain of the Pindus Mountains rises to 9,000 feet in places, separating Epirus from the plains of Thessaly. Greek Thrace is mostly a lowland region separated from European Turkey by the lower Maritsa River.

Among the many islands are the Ionian group off the west coast, 742 square miles in area; the Cyclades group to the south-east, 996 square miles; other islands in the eastern Aegean, including Lesbos, Samos and Khios, 1,486 square miles; and Crete, the fourth largest Mediterranean island, 3,199 square miles. Crete, largely mountainous, is about 160 miles in length, with a width varying from 7 to 35 miles.

The Dodecanese (area 1,035 sq. mi.), a group of 13 islands in the Aegean Sea near

the coast of Asia Minor, were ceded to Greece by the 1947 Italian peace treaty and were formally transferred on March 7, 1948.

Greek minerals are varied but are exploited only moderately. Principal ones are lignite, iron ore, iron pyrites, magnesite, chromite, lead, bauxite, molybdenum, emery, marine salt and the country's famous marble.

A fifth of the country is forested, largely with pine, fir and oak. Resin and turpentine are main forest products. The principal sea product is sponges.

The Greek climate is varied but generally similar to that of other Mediterranean countries. The maritime regions have a temperate climate, with short winters and little snow or frost. In the uplands the winters are long and severe. Precipitation is heaviest in the mountains. Mean temperature at Athens is about 63°, with maximum of 99° in July and minimum of 31.5° in January; annual rainfall there is little more than 15 inches. The summer heat is moderated by sea breezes and cool northerly winds from the mountains.

Guatemala (Republic)

(República de Guatemala)

Area: 42,042 square miles.

Population (est. 1956): 3,349,000 (1950:

Indian, 53.5%; mixed and other, 46.5%).

Density per square mile: 79.7.

President: Luis A. Gonzalez Lopez.

Principal cities (est. 1953): Guatemala, 319,000 (capital); Quezaltenango, 31,000 (coffee, sugar); Puerto Barrios, 18,000 (port); Mazatenango, 13,000 (coffee).

Monetary unit: Quetzal.

Language: Spanish.

Religion: Roman Catholic.

HISTORY AND GOVERNMENT. Once the site of the ancient Mayan civilization, Guatemala was conquered by Spain in 1524 and for the next 300 years was the major center of Spanish government in Central America. Guatemala was one of the founders of the Central American Union in 1823, and in 1839 set itself up as a republic. From 1898 to 1920, the dictator Manuel Estrada Cabrera ran the country, and from 1931 to 1944, General Jorge Ubico Castañeda was the "strong man." In July 1944, the National Assembly elected General Federico Ponce President, but he was overthrown in October, and in December Dr. Juan José Arévalo was elected as the head of a leftist regime which continued to press its reform program in the face of conservative resistance. He took office on March 15, 1945. Jacobo Arbenz Guzmán, administration candidate with pro-Communist leanings, won the Nov. 1950 elections and took office March 15, 1951. He was ousted by anti-Communist forces on June 27, 1954, and a military junta took over.

Col. Carlos Castillo Armas, one of its members, was confirmed as President. He was assassinated July 26, 1957 and was succeeded by Vice Pres. Luis A. Gonzalez Lopez.

A new Constitution has been adopted to take the place of that of 1945, which provided that a President be elected every six years by direct vote and could not succeed himself immediately. Legislative power was vested in a unicameral National Assembly whose members are popularly elected for four-year terms, half the members being elected every two years. Guatemala has an army of about 6,000, plus 3,000 national police. It also maintains a small air force.

SOCIAL AND ECONOMIC CONDITIONS. Education, advanced under Ubico, is free and compulsory. Illiteracy (7 years and over) was 72.2% in 1950. In 1953, 3,537 primary schools had 191,330 pupils and 125 postprimary schools 17,251 pupils. The University of Guatemala at Guatemala City had 4,005 students in 1954.

Most of the ruling class is drawn from the 5 per cent of the population that is white. Spanish is the official language, but at least 18 Indian dialects are spoken. Indians are the chief labor supply.

Agriculture engages 90 per cent of Guatemalans. Coffee accounts for a fifth of the cultivated land and a large part of the exports (production 1956-57: 1,240,000 bags of 132 lb. each). Recent foreign-trade data are as follows (in millions of quetzales):

	1954	1955	1956
Exports*	110.3	109.2	112.1
Imports	86.3	104.3	137.7

* Adjusted for banana undervaluation.

In 1956 the U. S. took 70% of the exports and supplied 69% of the imports. The chief exports were coffee (80%) and bananas (10%). Imports included flour, petroleum products, drugs and textiles.

Guatemalan manufacturing is small and local. The country has 539 miles of public railway connecting the coasts, 180 miles of private railway and 4,000 miles of highways. Puerto Barrios, on the Atlantic side, is the main port of entry, and is linked by rail to the capital.

NATURAL FEATURES AND RESOURCES; CLIMATE. Most of Guatemala is mountainous, with many volcanic peaks. The northern part is the great plain of Petén, largely uncultivated and sparsely populated. The narrow Pacific slope, well watered and fertile, is the most densely populated and the most productive part.

Guatemala has deposits of gold, silver, lead, tin, copper, mercury, coal, antimony, salt, chromite and sulfur, but many of these minerals exist in insufficient quantity to justify exploitation, and only lead and chromite are produced commercially.

The country's vast forests, mostly in the Petén region, yield chicle for chewing gum, cinchona bark, a small amount of rubber, and dyewoods and cabinet woods.

The climate is hot and humid on the coasts, with heavy rainfall (as high as 195 inches), but is temperate in the highlands.

Haiti (Republic) (République d'Haïti)

Area: 10,748 square miles.

Population (est. 1956): 3,350,000 (Negro, 95%; mulatto, 5%).

Density per square mile: 311.7.

President: François Duvalier.

Principal cities (census 1950)*: Port-au-Prince, 142,840 (capital, chief port); Cap Haïtien, 24,957 (seaport); Gonaïves, 13,534 (farming district); Les Cayes, 11,835 (seaport; coffee).

Monetary unit: Gourde.

Language: French.

Religion: Roman Catholic.

* Cities proper, excluding surrounding communes.

HISTORY. Haiti, the only Negro republic in the Western hemisphere, occupies the western third of the island of Hispaniola, which was discovered by Columbus in 1492. Its political past is stormy, and today it is the smallest and most thickly populated of the American republics—a nation beset by illiteracy and poverty.

After successive Spanish and French domination, Haiti became a kingdom in 1801 under Toussaint L'Ouverture, a Negro leader. He was later captured by the French and died in prison, but the kingdom lasted and declared its independence in 1804, becoming a republic in 1820. In 1822 Haiti took over all of Hispaniola, and carried on until 1843, when the eastern two-thirds of the island revolted and established the Dominican Republic. Today the island is the only one in the world containing two sovereign nations.

Decades filled with revolution, corruption and disease came to a bloody climax in 1911-15, when Haiti had seven presidents in four years. After the assassination of the last one, United States Marines moved in. By a 1916 treaty, the United States agreed to help administer the country until the Haitians proved themselves capable of orderly self-government. The last Marines left in 1934, but a U. S. fiscal expert continued to supervise customs until 1941. On January 11, 1946, President Elie Lescot was driven from the country by revolution, and a three-man military junta took over until the election of President Dumarsais Estimé on Aug. 16, 1946. He was ousted in 1950 and succeeded after new elections by Paul E. Magloire, who in turn was ousted in Dec. 1956.

GOVERNMENT. Normally the President is elected for six years by two-thirds vote of the National Assembly. That body consists of a 37-member Chamber of Deputies, elected for four years by popular vote, and a 21-member Senate elected for six years. The Garde d'Haiti, about 5,000 strong, serves as army and police force.

SOCIAL AND ECONOMIC CONDITIONS. Most Haitians are descended from African slaves. Their illiteracy rate is estimated at 90 per cent. Mulattoes—lightened by the blood of the early French settlers—dominate the political and social life of the nation. Many of them are Paris-educated. While the ruling classes speak pure French, most of the people speak the patois of Creole French.

Haiti is predominantly agricultural. Coffee, which makes up more than 50 per cent of Haitian exports, is the principal crop, followed by sisal, sugar cane, cotton, bananas and cacao. Coffee exports in 1954-55 amounted to 19,646 metric tons. Manufacturing is almost entirely for local consumption, but there are several sisal factories and sugar refineries.

Recent trade data are as follows (in millions of gourdes):

	1953-54	1954-55	1955-56
Exports	277.7	174.3	232.6
Imports	237.8	196.0	231.5

Leading exports in 1955-56 were coffee (72%), sisal (14%) and sugar (5%). Leading customers were the U. S. (34%), Belgium (20%) and Italy (18%); leading suppliers, the U. S. (62%), Canada (7%) and Germany (4%).

In 1953 Haiti had about 2,000 miles of improved road and about 180 miles of railway. International air service is provided by PAA and KLM.

Recent public finance data, in millions of gourdes:

	1953-54	1954-55	1955-56*
Revenue	161.1	191.0	128.2
Expenditure	175.0	189.4	128.2

* Budget estimate.

NATURAL FEATURES AND RESOURCES; CLIMATE. Haiti, about the size of Maryland, is two-thirds mountainous, with the rest marked by great valleys, extensive plateaus and small plains. The most densely populated and productive region is the Cul de Sac plain, near Port-au-Prince.

Minerals, relatively unexploited, include gold, silver, iron, copper, antimony, tin, coal, nickel and gypsum. In 1943, a sizable bauxite deposit was found and signed over for U. S. development. Inland Haiti has forests of mahogany, pine, lignum vitae and other commercial woods.

The climate is hot on the coast, temperate in the mountains, with hurricanes

frequent in the May-to-October rainy season. Port-au-Prince has a mean annual temperature of 81°. Annual rainfall in Haiti varies from about 20 to 100 inches.

Honduras (Republic) (República de Honduras)

Area: 43,277 square miles.

Population (est. 1956): 1,711,000 (1945: mestizo, 89.9%; Indian, 6.7%; Negro, 2.1%; white, 1.3%).

Density per square mile: 39.5.

Executive: Military junta.

Principal cities (census 1950): Tegucigalpa (including twin city of Comayagua), 72,385 (capital); San Pedro Sula, 21,139 (bananas); La Ceiba, 16,645 (seaport, bananas); Tela, 12,614 (seaport).

Monetary unit: Lempira.

Language: Spanish.

Religion: Roman Catholic.

HISTORY AND GOVERNMENT. Columbus discovered Honduras on his last voyage in 1502; it was a Spanish colony and part of Guatemala until 1821, the year of the general Central American revolt against Spain. Honduras declared its independence in 1838, and has been troubled by revolution and war ever since. American Marines intervened in 1903 and 1923. In 1931, 1932 and 1937, major revolutions were crushed by force. The Nicaraguan-Honduras boundary dispute of 1937 almost caused war, and in April 1945, the country was invaded from Guatemala by a group of Honduran exiles, who were suppressed.

Julio Lozano Díaz, who assumed power Dec. 6, 1954, when constitutional rule ceased, was himself ousted Oct. 21, 1956, by a military junta.

Military service is compulsory. The army is estimated to be slightly under the 2,500 strength agreed upon by the Central American states.

SOCIAL AND ECONOMIC CONDITIONS. Education is free and supposedly compulsory, but less than 25 per cent of the children go to school. The government is trying to reduce illiteracy, which was 64.8% according to the 1950 census. In 1953-54, 2,214 primary schools had 117,292 pupils; secondary, normal and commercial schools had 6,847 students and the National University at Tegucigalpa 843 students.

The Honduran economy depends on bananas, which usually account for more than 50 per cent of the nation's exports. The biggest plantations are along the northern coast. Exports in 1955 totaled 10,929,000 count bunches (50 lbs. each), more than 90 per cent of which were produced by two U. S. companies. Other crops are corn, coffee, rice, henequen, tobacco and coconuts. Honduras also is an important source of sarsaparilla. Cattle raising and dairy farming flourish on rich

pasture lands. Manufacturing is small and local.

Recent foreign trade data are as follows (in millions of lempiras):

	1954	1955	1956
Exports	109.2	100.7	145.1
Imports	103.1	108.6	117.2

In 1955 the U. S. took 68% of the exports and supplied 66% of the imports. Leading exports were bananas (46%), coffee (22%) and silver (7%).

Honduras' railroads—788 miles, including branch lines—are almost entirely owned by fruit companies and used to transport bananas; they are confined to the northern coastal area. Air transportation is of great importance.

NATURAL FEATURES AND RESOURCES; **CLIMATE.** Honduras, in the north central part of Central America, has a 400-mile Caribbean coast-line and a 40-mile Pacific frontage. Generally mountainous, it has fertile plateaus and river valleys and narrow coastal plains.

Gold and silver are the most important mineral products of Honduras. Copper and iron exist in paying quantity but are undeveloped. The country is noted for rich forest resources, particularly the tropical hardwoods.

The climate is oppressive in the coastal lowlands, pleasant in the interior highlands. At Tegucigalpa, maximum temperature is about 90° (in May), and minimum 50° (December).

Hungary (Republic)

Area: 35,905 square miles.

Population (estimated 1956): 9,906,000 (Magyar, German, Slovak).

Density per square mile: 275.9.

Chairman of Presidium: István Dobi.

Prime Minister: Janos Kadar.

Principal cities (est. 1954): Budapest, 1,781,085 (capital, Danube port); Miskolc, 135,780 (industrial center); Debrecen, 113,243 (livestock); Szeged, 88,590 (textiles, wheat); Pécs, 87,140 (farming).

Monetary unit: Forint.

Languages (census 1949): Hungarian, 98.7%; Slovak, .3%; German, .2%; Rumanian, .2%; others, .6%.

Religions (est. 1949): Roman Catholic, 70.6%; Calvinist, 22.8%; Lutheran, 3.3%; Jewish, 1.9%; Greek Orthodox, .4%; others, 1%.

HISTORY AND GOVERNMENT. About two thousand years ago, Hungary was part of the Roman provinces of Pannonia and Dacia on the empire's borders. In A.D. 894 it was invaded by the Magyars, who founded a kingdom. Christianity was accepted during the reign of Stephen I (St. Stephen) from 997 to 1083. The peak of Hungary's great period of medieval power came in 1342-82 under King Louis the

Great (Louis I) of Anjou, whose dominions touched the Baltic, Black and Mediterranean seas. When the Turks smashed a Hungarian army in 1526, western and northern Hungary accepted Hapsburg rule to escape Turkish occupation. Transylvania became independent under Hungarian princes. Intermittent war with the Turks was waged thereafter for some years.

After the suppression of the 1848 revolt against Hapsburg rule led by Louis Kossuth, the dual monarchy of Austria-Hungary was set up in 1867.

The dual monarchy was defeated with the other Central Powers in World War I, and the new Hungary underwent hard times. First there was a short-lived Socialist republic in 1918. The chaotic Communist rule of 1919 under Béla Kun ended with the Rumanians occupying Budapest on Aug. 4, 1919. When the Rumanians left, Admiral Nicholas Horthy entered the capital with a national army. The Treaty of Trianon of June 4, 1920, cost Hungary 75 per cent of its land and more than 50 per cent of its population. Meanwhile, the National Assembly had restored the legal continuity of the old monarchy; and on March 1, 1920, Horthy was elected Regent.

After 1920, Hungary was in effect ruled by its great land owners, but the turn came in 1932 with the accession of General Julius de Gömbös, a pro-Fascist, as Prime Minister. Under Gömbös and his successors (Kaloman Daranyi in 1936 and Béla Imrédy in 1938) co-operation with Italy and Germany was Hungary's guiding principle. Hungary signed the anti-Comintern pact on Jan. 13, 1939, and the Three Power Pact of Germany, Italy and Japan on Nov. 20, 1940. As inducement and reward for these actions, Hungary got part of Slovakia and all of Ruthenia from Czechoslovakia in 1938 and 1939, and northern Transylvania from Rumania in 1940.

Following the German invasion of Russia on June 22, 1941, Hungary joined the attack against the U.S.S.R., but the war was not popular and Hungarian troops were almost entirely withdrawn from the eastern front by May 1943. The government of Nicholas von Kállay was overthrown March 19, 1944, and German occupation troops set up a puppet government after Admiral Horthy's appeal for an armistice with advancing Soviet troops had resulted in his overthrow on Oct. 16. The German regime soon fled the capital, however, and on Dec. 23 a provisional government was formed in Soviet-occupied eastern Hungary. On Jan. 20, 1945, it signed an armistice in Moscow. On Feb. 1, 1946, the National Assembly approved a constitutional law abolishing the 1,000-year-old monarchy and establishing a republic.

Through its control of the police, the Communist party forced Prime Minister Ferenc Nagy to resign on May 30, 1947, and secured the appointment of a left-wing Smallholder, Lajos Dinnyes, in his place. The Communists emerged as the strongest single party in national elections held Aug. 31, 1947. President Zoltan Tildy resigned July 30, 1948, and was replaced by leftist Arpad Szakasits. Istvan Dobi, also a left-wing Smallholder, replaced Dinnyes on Dec. 10, 1948.

The Communist regime devoted itself to the transformation of Hungary into a people's democracy modeled after the U.S.S.R. The country, however, almost shook the Soviet yoke in the fall of 1956 but Soviet troops intervened and Janos Kadar took over as prime minister on Nov. 4 with Soviet support.

The Soviet-type Constitution adopted by Parliament on Aug. 18, 1949 declared Hungary to be a "people's republic." The supreme organ of state control was declared to be the Parliament, with deputies elected every 4 years by direct vote. When Parliament is not in session, power is exercised by the Presidium headed by a Chairman. Executive power is vested in the Cabinet headed by the Prime Minister.

Only the Communist-controlled left-wing coalition was represented in the National Assembly after elections held May 15, 1949, in which only one slate of candidates was presented.

PEACE TREATY OF 1947. The final peace treaty, which took effect Sept. 15, 1947, fixed Hungary's frontiers as they were on Feb. 1, 1938, except that a small bridgehead on the south bank of the Danube opposite Bratislava was ceded to Czechoslovakia. Hungary was to pay reparations of \$300,000,000 over a period of 8 years, \$200,000,000 to the Soviet Union and \$100,000,000 to Yugoslavia and Czechoslovakia. The treaty also provided freedom of navigation on the Danube for nationals of all states.

The strength of Hungarian armed forces was fixed by the treaty as follows: army, 65,000, including frontier, anti-aircraft artillery and river flotilla personnel; air force, 90 planes with a personnel of 5,000. Actual strength of the army by 1956 was thought to be about 280,000.

SOCIAL AND ECONOMIC CONDITIONS. Education is state-controlled and is compulsory between the ages of 6 and 14. Parochial schools were nationalized in 1948. Illiteracy (7 years and over) was estimated at 5% in 1949. In 1954 there were 6,185 elementary schools with 1,208,000 pupils and 405 secondary schools with 162,500 pupils. The 21 institutions of higher learning (including 5 universities) had 47,500 students.

Agriculture is the basis of Hungarian economic life, engaging more than half the population. The Land Reform Act issued in March, 1945, provided for the confiscation of all estates over 1,500 acres; about 8,000,000 acres were divided among some 500,000 families. Cereals grown in the fertile Danubian plains are the chief crops. Leading crops in 1956 were wheat (1,700,000 metric tons), potatoes (1955: 2,470,000 tons), barley (630,000 tons), rye (450,000 tons), oats (160,000 tons), maize (1955: 2,910,000 tons) and sugar beets.

In addition, cultivation of vines, fruit and garden produce is important; the famous Tokay wine is produced on the southern slopes of the Hegyalja in the northeast. Wine production averages 100,000,000 U. S. gallons annually (1956: 92,000,000 U. S. gallons).

Horse-breeding is a traditionally important branch of agriculture. Hungarians have a great love for horses, and their excellent breeds were exported in large numbers before World War II. Livestock in 1956 included 1,930,000 sheep, 6,056,000 hogs, (1955) 1,983,000 cattle, 550,000 horses.

The dominant industries are all based on agriculture, with flour milling in first place, followed by sugar refining, brewing and canning. The second group of industries make hardware and machinery. Most of the machine industry is concentrated in Budapest and Győr. Cotton leads the textile industry, especially in Budapest, which is also a center of woolen manufactures. Hemp and flax weaving are important. An estimated 885,000 persons were employed in industry in 1954. Almost all industrial facilities were nationalized under laws passed in 1946, 1948 and 1949. In addition, the Soviet Union took over all German-owned plants as reparations, and in 1946 Soviet-Hungarian companies were formed to exploit bauxite, petroleum, and air and river navigation; the Soviet shares in these companies were sold to Hungary in Nov. 1954.

Total trade in 1954 (imports and exports) was estimated by the U. N. Economic Commission for Europe at \$950,000,000, of which \$660,000,000 was with the countries of the Communist group. Leading exports ordinarily include grain, textiles, live animals and animal products, and machinery.

The focal point in the country's transportation system is the Danube River, navigable for 423 miles in Hungary. The nation's central location makes it the center of an important transit trade; its pre-war river fleet was the largest on the Danube. Railroad mileage in 1951 totaled 7,100; highway mileage in 1955, 39,569.

NATURAL FEATURES AND RESOURCES; CLIMATE. Most of Hungary is a fertile,

rolling plain lying east of the Danube, and drained by the Danube and the Tisza Rivers. In the extreme northwest is the Little Hungarian Plain. South of that area is Lake Balaton, 250 square miles, the largest lake of western and central Europe.

While Hungary generally is mineral-poor, it has an estimated 250,000,000 tons of bauxite—about 20% of the world's known reserves. Production in 1955 was estimated at 1,290,000 metric tons. The coal is of low quality and is insufficient to meet domestic needs; production in 1955 was estimated at 1,920,000 metric tons and that of lignite at 20,800,000 tons. Other minerals include iron ore, manganese and gold. Petroleum production in 1955 was about 12,300,000 barrels.

About 12 per cent of Hungary is forested, but the products are of little importance. There are valuable fisheries in Lake Balaton and on the Danube.

Hungary's mean annual temperature ranges from 48° in the north to 52° in the south. Precipitation varies from 30 to 35 inches in the Bakony Forest to less than 15 inches in the east; most of the rain falls in May and June. High summer temperatures and a long autumn are favorable to agriculture.

Iceland (Republic)

(Island)

Area: 39,768 square miles.*
Population (est. Dec. 31, 1956): 162,391
(almost entirely Icelandic).
Density per square mile: 4.1.
President: Asgeir Asgeirsson.
Prime Minister: Hermann Jonasson.
Principal city (est. 1955): Reykjavik,
63,666 (capital and only large city).
Monetary unit: Króna.
Languages: Icelandic, Danish.
Religion: Evangelical Lutheran.

* Including several off-shore islands.

HISTORY AND GOVERNMENT. Iceland was first settled shortly before 900, mainly by Norse. A Constitution drawn up about 930 created a form of democracy and provided for an Althing, or General Assembly, now the oldest legislative body in the world. In 1262-64, Iceland came under Norwegian-Danish rule. In 1874 Icelanders obtained their own Constitution. In 1918 Denmark recognized Iceland as a separate state with unlimited sovereignty, but still nominally under the Danish King. On June 17, 1944, after a popular referendum, the Althing proclaimed Iceland a completely independent republic.

The British occupied Iceland in 1940, immediately after the German invasion of Denmark. In 1942, the United States took over the burden of protection. Iceland refused to abandon its neutrality in World War II, and thus forfeited charter member-

ship in the United Nations, but it was cooperative with the Allies throughout. Iceland joined the North Atlantic Treaty Organization in 1949, and in May 1951, U. S. troops again landed at Iceland's request to aid in its defense preparations. Withdrawal of an Icelandic request for evacuation of U. S. troops was announced Dec. 6, 1956.

Constitutionally, the President of Iceland is elected for four years by popular vote. Executive power of the state resides in the Prime Minister and his Cabinet. The Althing is composed of two houses, one with 17 members and the other with 35; each has equal constitutional power. Iceland has no army or navy.

SOCIAL AND ECONOMIC CONDITIONS. Illiteracy is virtually unknown in Iceland. Education is compulsory from 7 to 15, and mobile schools are sent traveling through the sparsely settled areas. When the University of Iceland, established in 1911, needed new buildings in 1935, the government licensed it to conduct a national lottery to raise the funds. The high number of scholarships and the low tuition fees make higher education virtually free.

Iceland publishes more books, newspapers and magazines per capita than any country in the world. Its language, Icelandic, has no dialects and has changed little through the centuries. In addition, Danish is widely understood and spoken. The Evangelical Lutheran Church is state-supported, but there is complete religious freedom.

Approximately six-sevenths of Iceland is unproductive, and only one-fourth of one per cent is under cultivation. With about 30 per cent of the population engaged in farming, sheep raising is the most important branch of this industry. Hay, potatoes and turnips are the principal crops.

Recent trade data are as follows (in millions of krónur):

	1954	1955	1956
Exports	845.9	847.9	1,031.0
Imports	1,130.4	1,264.3	1,468.1

Fish and fish products accounted for 93% of the exports in 1956. Leading customers were the U.S.S.R. (20%), the U. S. (12%), Britain (9%) and western Germany (9%); leading suppliers, the U. S. (17%), the U.S.S.R. (17%) and western Germany (10%).

Iceland has no railways. Motorable roads totaled about 5,500 miles in 1956. In Oct. 1956 the merchant marine had 598 vessels (100 tons and over) aggregating 108,915 gross tons.

NATURAL FEATURES AND RESOURCES; CLIMATE. Iceland, a bleak, volcanic island about the size of Kentucky, has maximum dimensions of 298 by 194 miles; it is mostly

tableland, high, rugged and barren. It is one of the world's most volcanic regions.

Small fresh-water lakes are found throughout the island, and there are many natural oddities, including hot springs, geysers, sulfur beds, canyons, waterfalls and swift rivers. More than 13 per cent of the area is covered by snowfields and glaciers, and most of the people live in the 7 per cent of the island comprising fertile coastlands. Vegetation is of the Arctic type, mostly stunted. Except for peat and fisheries, Iceland has no natural resources.

About one-sixth of the people are engaged in fishing, and fish and fish products make up the bulk of Iceland's exports. The annual catch averages approximately 350,000 metric tons (1956: 443,709 tons). Many European fishing craft visit Iceland's fisheries, which lead the world in cod and are important for herring, plaice and halibut.

The Gulf Stream modifies Iceland's climate to make it much like that of southern Canada, though with longer winters and shorter summers. The mean annual temperature at Reykjavik is 39.4°, with January the coldest month (34.2°) and July the warmest (51.6°). Rainfall varies from about 12 inches annually to 85.

Indonesia (Republic)

(Republik Indonesia)

Area: 575,893 square miles.*

Population (est. 1956): 84,654,320* (Indonesian, except for an estimated 1,500,000 Chinese and 100,000 Europeans in 1951).

Density per square mile: 147.0*

President: Achmed Sukarno.

Premier: Djuanda Kartawidjaja.

Principal cities (est. Dec. 31, 1956): Jakarta, 1,927,785 (capital); Surabaya, 980,905 (industrial center); Bandung, 870,346 (commercial center, west Java); Semarang, 389,970 (seaport, central Java); Surakarta, 380,843 (industrial center); Makassar, 346,080 (coffee, teak); Medan, 303,261 (rail center, Sumatra).

Monetary unit: Rupiah.

Languages: Bahasa Indonesia (Malay) (official), Dutch, Javanese, Sundanese, Madurese.

Religions: Moslem (predominant), Christian (about 2,500,000), Brahmin, Buddhist.

* Excluding Netherlands New Guinea.

HISTORY. The sovereign state of Indonesia, a group of islands with a total area more than twice that of Texas, constitutes one of the world's richest natural areas. These islands—Sumatra, Java, Madura, central and southern Borneo, Celebes and the Moluccas—would reach from San Francisco to Honolulu if their extent was transposed to the eastern Pacific. They have great wealth in tin, rubber, spices, oil, quinine and copra.

During the first few centuries of the Christian era, most of the islands came under the influence of Hindu priests and traders who spread their culture and religion. Moslem invasions began in the 13th century, and most of the area was Moslem by the 15th century. Portuguese traders arrived early in the 16th century but were ousted by the Dutch about 1595. After Napoleon subjugated the Netherlands homeland in 1811, the British seized the islands but returned them to the Dutch in 1816. In 1922 the islands were made an integral part of the Netherlands kingdom.

In World War II, the Japanese military occupation with nominal native self-government continued until Aug. 1945, except in outlying parts of New Guinea and Borneo. About the time of the Japanese surrender, a self-styled Indonesian Republic headed by Achmed Sukarno sprang up and took over effective control of parts of Sumatra and Java. Allied forces, mostly British Indian troops, moved in, and fighting between them and the nationalists continued until Nov. 15, 1946, when Dutch-Indonesian parleys resulted in a draft agreement initialed at Linggadjadi, near Cheribon. The agreement was formally signed by Dutch and Indonesian authorities on March 25, 1947.

This agreement contemplated the formation by Jan. 1, 1949, of a Netherlands-Indonesian Union, consisting on the one hand of the Netherlands, the Netherlands Antilles and Surinam and on the other of the United States of Indonesia, which was to be a sovereign nation composed of three equal states—the Republic of Indonesia, East Indonesia and Borneo. Differences of interpretation ensued, and the Dutch resorted to force on July 20, 1947. Both sides issued cease-fire orders on Aug. 4, 1947, in response to a call from the U. N. Security Council.

The U. N. named a Good Offices Commission under whose auspices the Dutch and the Republic signed another truce on Jan. 17, 1948, aboard the U.S.S. *Renville*. A provisional federal government for the whole area was installed on Mar. 9, 1948, but difficulties between the Dutch and the Republic continued. On Dec. 18, 1948, Dutch forces instituted "police" action against Republican areas and seized the Republican leaders. Hostilities ceased Jan. 1, 1949, following U. N. intervention. On May 7, the Dutch agreed to return the exiled Republican regime to central Java.

On Nov. 2, 1949, Dutch and Indonesian leaders agreed upon the terms of union between the Netherlands and Indonesia. Dr. Sukarno was elected President of the federation on Dec. 16 by representatives of the Indonesian states, and the first all-Indonesian Cabinet was formed with Moham-

med Hatta as Premier. The transfer of sovereignty took place at Amsterdam on Dec. 27, 1949.

The principle of federalism was discarded on Aug. 4, 1950, and Indonesia became a unitary state. The attaining of independence was followed by repeated financial, economic and political crises and weak Cabinets. Relations with the Netherlands were strained by a dispute over the status of Netherlands New Guinea and proposals for the termination of the union; the latter finally was dissolved Aug. 11, 1954.

GOVERNMENT AND DEFENSE. Indonesia is a republic of 10 provinces under the Constitution promulgated on Aug. 15, 1950. Legislative power is vested in the 260-member Parliament. The President and the Premier and his Cabinet exercise executive power. A Constituent Assembly to draft a new Constitution was elected commencing in Dec. 1955.

The republic's first general elections, held between Sept. 29 and Nov. 30, 1955, divided the 260 seats as follows: Nationalist, 57; Masjumi (Moslem), 57; Nahdatal Ulama (Moslem Schoolmen's League), 45; Communist, 39; others, 62.

Military service is not compulsory. The army is to be stabilized at 300,000 men. The navy (1956) had 1 destroyer, 4 corvettes, 6 patrol ships and many smaller craft.

SOCIAL AND ECONOMIC CONDITIONS. School attendance is not compulsory. Illiteracy was officially estimated at 47% in 1952. In 1955 there were 29,629 elementary schools with 6,316,233 pupils and 1,525 secondary schools with 385,365 pupils. The 23 institutions of higher learning had 19,063 students.

The islands of Java and Madura, with only nine per cent of the area, have more than two-thirds of the population, and are among the most densely settled areas in the world (more than 1,000 per sq. mi.). The people, including about 137 races and tribes, are mainly of Malayan stock, with the Javanese the most advanced.

Agriculture engages about 70 per cent of the adult males. Rich in a variety of crops, the islands prior to World War II produced about 31 per cent of the world's copra, 37 per cent of its rubber, 83 per cent of its pepper, and nearly all of its quinine. The big-estate agriculture on Java and Sumatra is devoted mainly to export. The rest is subsistence agriculture. Rice is the staple food and chief crop; production in 1956 was 14,601,200 metric tons (paddy). Major plantation crops, with 1956 production in metric tons, are rubber, 697,200; (estates only) tea, 42,629; coffee, 12,783; cinchona bark, 2,249; palm kernels, 41,389; sugar, 785,581. Others are copra (exports 1955: 159,200 tons), cacao, spices, agava

fiber and kapok. In addition to rice, the chief food crops of the Republic are maize (1,904,800 tons in 1956), cassava, sweet potatoes, peanuts and soybeans.

In 1955 there were an estimated 4,073,000 cattle, 2,807,000 sheep, (1954) 631,000 hogs, 621,000 horses and 2,911,000 buffalo.

Industry, especially in Java, developed rapidly after 1930. In addition to industries connected with the processing of the rich natural products, there were established chemical works, textile and paper mills, soap factories, breweries, shipyards, a Goodyear tire and rubber plant and a General Motors assembly plant.

Indonesia is primarily an importer of consumer and capital goods and an exporter of mineral and plantation products. Recent trade data are as follows (in millions of rupiahs):

	1954	1955*	1956*
Exports	9,878.7	10,618.0	10,054.6
Imports	7,174.5	6,887.7	9,725.4

* Preliminary.

Chief exports in 1956 were rubber (40%), petroleum and products (25%), tin (7%), copra (4%) and tea (3%). Leading customers were Singapore (21%), the Netherlands (19%), the U. S. (16%), Britain (10%) and Malaya (3%); leading suppliers, the U. S. (16%), Japan (16%), the Netherlands (11%), western Germany (9%) and Britain (6%).

The highway network totaled over 46,000 miles in 1954, and there were about 4,200 miles of railway, of which about three-fourths were in Java and a fourth in Sumatra. According to *Lloyd's Register*, the merchant marine had 152 ships (100 tons and over) aggregating 101,631 gross tons on June 30, 1956.

Recent financial data are as follows (in millions of rupiahs):

	1954	1955*	1956*
Revenue	11,539	13,556	18,654
Expenditure	15,141	17,053	19,654

* Budget estimate.

The public debt, consolidated and floating, was reported on Dec. 31, 1956, at 19,712,000,000 rupiahs, of which 11,876,000,000 rupiahs represented the floating debt.

NATURAL FEATURES AND RESOURCES; CLIMATE. A backbone of high mountain ranges with many snow-capped peaks extends throughout the main islands of the archipelago. Earthquakes are frequent, and there are many active volcanoes, 90 of them in Sumatra. Borneo is heavily forested.

Petroleum is the principal mineral product of modern Indonesia. The fields, in Sumatra, east Borneo and east Java, produced 12,730,160 metric tons (about 94,500,000 barrels) in 1956.

The tin industry attained prewar levels more rapidly than others after World War II; production in 1956 was 30,536 metric tons. Other important minerals include bauxite (1956: 303,300 metric tons), coal (828,239 tons), salt, nickel and manganese. Deposits of uranium are reported.

Forests, covering much of the area except Java, yield such products as timber, rattan, bamboo, gum, wild rubber, gutta-percha and quinine. Most valuable timber is teak, found mostly in east Java. Ebony, sandalwood and ironwood also are cut.

The climate throughout the group is equatorial and monsoonal, with little variation of temperature (yearly average about 80°; at Batavia, 79°) and rainfall averaging over 100 inches a year. In Sumatra and Java the hot and rainy season usually lasts from May to October; December and January are relatively cool and dry; February, March and April, hot and dry.

Iran (Kingdom)

Area: 636,293 square miles.

Population (est. 1955)*: 21,146,000 (Iranian, Kurdish, Azerbaijani).

Density per square mile: 33.2.

Ruler: Mohammed Riza Pahlavi.

Premier: Manouchehr Eghbal.

Principal cities (est. 1950): Teheran, 618,976 (capital); Tabriz, 279,168 (manufacturing center); Isfahan, 196,134 (cotton, tobacco); Meshed, 191,794 (Moslem shrine); Hamadan, 123,931 (western trading center).

Monetary unit: Rial.

Languages: Iranian (Persian), Kurdish, Azerbaijani.

Religions: Moslem (Shiah), about 90%; Moslem (Sunni), about 5%; Armenian; Jewish; Nestorian; Parsi.

* U.N. estimate; no census ever taken.

HISTORY. Oil-rich Iran, roughly one-fifth the size of the United States, was called Persia before 1935. Its key location blocks the lower land gate to Asia, and also stands in the way of traditional Russian ambitions for access to the Indian Ocean. In modern times, Iran has drawn Big Power interest because of its especially rich oil deposits.

Iran's history is a long one of rising and falling dynasties. After periods of Assyrian, Median and Achaemenid rule, Persia became a powerful empire under Cyrus the Great, reaching from the Indus to the Nile at its zenith in 525 B.C. It fell to Alexander in 331-30 B.C., to the Selucidae in 312-02 B.C., and to the Parthians about 130 B.C. A native Persian regime arose about A.D. 224, was weakened fighting the Turks, and fell to the Arabs in 637. In the 12th century the Mongols took their turn ruling Persia, and in the early 18th century the Turks and Russians occupied it. In modern times, Russia, Turkey, Britain, France and

most recently, the United States all have taken keen competitive interest in Iran.

An Anglo-Russian convention of 1907 divided Iran into two spheres of influence. British attempts to impose a protectorate over all of Iran were defeated in 1919. On Feb. 26, 1921, General Riza Pahlavi seized the government and was elected hereditary Shah in 1925. Subsequently he did much to modernize the country and abolished all foreign extraterritorial rights.

Increased pro-Axis activity led to Anglo-Russian occupation of Iran in August 1941 and deposition of the Shah in favor of his son, Mohammed Riza Pahlavi.

In November 1945, a Soviet-inspired autonomist movement won control of Azerbaijan, Iran's northwest province. To protect their advantage, the Russians kept troops in that area past the treaty evacuation date of March 2, 1946. The Iranians promptly protested this breach of agreement to the United Nations. The Russians evacuated their troops on May 6.

All Razmara became Premier June 26, 1950, and pledged to restore efficient and honest government, but he was assassinated Mar. 7, 1951. Mohammed Mossadegh took over April 29. The next day, Parliament completed action on a bill nationalizing the oil industry. The action was taken over strong British protests, but Britain evacuated the oil refineries Oct. 3, 1951. Subsequent British-Iranian negotiations failed. Loss of oil revenue placed Iran in a precarious economic position.

Mossadegh was ousted Aug. 19, 1953, in a *coup d'état* led by Fazollah Zahedi, whom the Shah had named Premier. The oil dispute was settled in Aug. 1954. Hussein Ala succeeded Zahedi as Premier on Apr. 7, 1955; Ala was succeeded by Manouchehr Eghbal April 3, 1957.

GOVERNMENT AND DEFENSE. Iran is a constitutional monarchy, and the Shah has the usual powers of the head of a parliamentary state. Executive power is exercised by a Cabinet headed by the Prime Minister, who is appointed by the Shah and is responsible to Parliament, the lower house of which (Majlis) has 136 popularly elected members and the upper house of which (Senate) has 60 members, half of whom are appointed by the Shah.

Military service is compulsory; the initial training period is 2 years. The army, modernized and reorganized by Riza Pahlavi, father of the present Shah, consists of about 130,000 men. The air force has several hundred planes, and the navy several small craft in the Persian Gulf. There is also a U. S.-trained police force numbering 20,000.

SOCIAL AND ECONOMIC CONDITIONS. Education has made good progress in the

20th century, supplanting the old and essentially religious system. In 1953-54 there were 5,959 primary schools with 790,200 pupils; secondary schools (411 in 1952) had 119,300 students in 1953-54. There are universities at Teheran and Tabriz. Illiteracy is high.

Iran is predominantly agricultural. Large estates are numerous, and irrigation is common, especially on the central plateau. The principal crops are wheat (est. 1956: 2,700,000 metric tons) and barley (880,000 tons). Rice production, confined largely to the Caspian provinces, was estimated at 440,000 tons (paddy) in 1956.

Other crops include grapes, dates, apricots, tobacco, tea, cotton, sugar beets and corn. There are extensive grazing lands. Wool production in 1956 was estimated at 10,000 metric tons (clean); in 1955 there were an estimated 21,650,000 sheep.

Iran must still import many manufactured necessities, but several new factories were established by the government after 1925, including sugar plants, rice and oil mills, textile factories, a cement factory, copper smelter, glycerine factory and small arms factory. Both sugar and tobacco are government monopolies. The manufacture of carpets, for which Iran is famous, is a valuable industry.

Foreign-trade data (trade years beginning March 21) in millions of U. S. dollars:

	1951-52	1952-53	1953-54
Exports	288.2	73.9	93.7
Imports	176.5	117.1	176.0

In 1953-54 the leading customers were the U. S. and Canada (23%), Germany (21%), and other continental European Payments Union countries (16%); leading suppliers, Germany (21%), other continental EPU countries (25%) and the U. S. and Canada (18%). The principal exports in 1952-53 were cotton (17%) and rugs (16%).

In 1953 there were about 44,000 miles of roads and in 1954 about 1,600 miles of railway, with more under construction.

The budget for 1956-57 forecast revenue at 15,800,000,000 rials and expenditure at 19,800,000,000 rials.

NATURAL FEATURES AND RESOURCES; CLIMATE. Iran is, in general, a plateau averaging 4,000 feet elevation. In addition, there are maritime lowlands along the Persian Gulf and the Caspian Sea. The Elburz Mountains in the north rise to 18,603 feet at Mt. Demavend. From northwest to southeast, the country is crossed by a desert 800 miles long.

Considerable mineral wealth exists, but only oil is exploited commercially. The principal field, near Shushar in the southwest, was worked until 1951 by the Anglo-Iranian Oil Company. The latter's conces-

sion began in 1901 and was to run until 1993, but its properties were nationalized by the Iranian government in April, 1951. Production under Iranian control was negligible. Under an agreement signed Sept. 19, 1954, Iran's oil is being produced, refined and marketed by a consortium of 8 western oil companies, with 50% of the profits going to Iran. The consortium began production Oct. 29, 1954, and during 1956 produced 25,934,000 long tons (about 197,600,000 barrels). Income to the Iranian government exceeded £54,300,000.

Deposits of uranium have been reported in Iran.

The main forest belt on the northern Elburz slope supplies railroad ties, charcoal and firewood. Gums are the most valuable forest product. Fisheries are worked in the Persian Gulf and the Caspian Sea.

The central plateau is hot in summer and very cold in winter, but the Caspian area has a sub-tropical climate. Mean temperatures vary at Teheran from 35° in January to 85° in July (yearly average 62°); at Bushire, on the Persian Gulf, from 58° in January to 90° in July and August. Rainfall is light and variable (4 to 20 inches or more annually at Teheran).

Iraq (Kingdom)

Area: 171,599 square miles.*

Population (est. 1955): 5,200,000 (Arab, 75%; Kurdish, 15%; Iranian, 3.75%; others, 6.25%).

Density per square mile: 30.3.

Ruler: King Faisal II.

Premier: Ali Jawdat.

Principal cities (census 1947, cities proper): Baghdad, 364,049 (capital); Mosul, 203,273 (oil); Karbala, 122,719 (religious center); Basra, 94,000 (chief port).

Monetary unit: Dinar.

Languages: Arabic, Kurdish.

Religions (census 1947): Moslem, 93.6%; Christian, 3.1%; Jewish, 2.5%; others, 8.3%.

* Includes desert area of 80,583 square miles.

HISTORY. Iraq, a triangle of mountains, desert and fertile river valley less than half the size of Texas, is bounded east by Iran, north by Turkey, west by Syria and Jordan, and south by Saudi Arabia. From earliest times it has been known as Mesopotamia—the land between the rivers—for it embraces a large part of the alluvial plains of the Tigris and Euphrates.

An advanced civilization existed in Mesopotamia by 4000 B.C. Sometime after 2000 B.C. it became the center of the ancient Babylonian and Assyrian empires. It was conquered by Cyrus the Great of Persia in 538 B.C., and by Alexander in 331 B.C. After an Arab conquest in A.D. 637-40, Baghdad became capital of the ruling caliphate. The country was cruelly pillaged by the Mon-

gols in 1253, and during the 16th, 17th and 18th centuries was the object of repeated Turkish-Persian competition.

Nominal Turkish suzerainty imposed in 1638 was replaced by direct Turkish rule in 1831. In World War I an Anglo-Indian force occupied most of the country, and Britain was given a mandate over the area in 1920. The British recognized Iraq as a kingdom in 1922 and terminated the mandate in 1932, when Iraq was admitted to the League of Nations. In World War II, Iraq generally adhered to its 1930 treaty of alliance with Britain, but in 1941 British troops were compelled to put down a pro-Axis revolt led by Prime Minister Rashid Ali. Iraq became a charter member of the Arab League in March 1945, and Iraqi troops took part in the Arab invasion of Palestine in 1948. The 1930 treaty of alliance with Britain was terminated in April 1955 and replaced by a defense co-operation agreement.

King Faisal II, born on May 2, 1935, succeeded his father, Ghazi I, who was killed in an automobile accident on April 4, 1939. The King's uncle, Abdul-Ilah, is heir apparent.

GOVERNMENT AND DEFENSE. Under the 1924-25 Constitution, Iraq is a hereditary monarchy with a two-house Parliament. The Senate is named by the King for a term of eight years; the 138-member Chamber of Deputies is elected popularly for four years. Executive power is vested in a Council of Ministers, headed by the Prime Minister, who is appointed by the King.

Military service is compulsory, with an initial training period of 1½ to 2 years. The army numbers about 60,000.

SOCIAL AND ECONOMIC CONDITIONS. Primary education is free and nominally compulsory. Secondary education is neither free nor compulsory. There are no universities. In 1955 there were 1,825 elementary schools with 353,227 pupils and 203 secondary schools with 57,250 students; 15 institutions of higher learning had a combined enrollment of 5,445.

The chief economic activity is agriculture, dependent upon irrigation and confined to the valleys of the Tigris and Euphrates. Iraq supplies about 80 per cent of the world's dates (1956: 335,000 short tons). Chief among the cereal products of Iraq are barley (1956: 1,016,000 metric tons), wheat (776,000 tons), rice, sorghum, maize and millet. Many fruits and some tobacco and cotton are grown. Grazing is the principal occupation of the many nomadic and seminomadic tribes. Livestock estimates included (1953-54) 10,000,000 sheep, 1,510,000 cattle, 718,000 buffalo,

(1953) 2,000,000 goats, 300,000 camels. Wool production in 1956 was about 8,000 metric tons (clean basis).

Industry is still embryonic. Of some 100 firms, the most important are those making brick, tile, woolen textiles, vegetable oils, soap, glass and cigarettes.

Recent foreign-trade data are as follows (in millions of dinars):

	1954	1955	1956
Exports*	174.5	185.4	170.6
Imports	72.8	97.2	114.6

* Adjusted to include estimated value of crude petroleum exports.

Chief exports in 1956 were petroleum (92%), barley (3%) and dates (1%). Leading suppliers in 1955 were Britain (28%), the U. S. (15%) and Japan (8%); leading customers, France (23%), Italy (19%) and Britain (12%).

The only port for seagoing vessels is that of Basra, located on the Shatt al-Arab River near the head of the Persian Gulf. There are about 12,000 miles of roads. Iraq State Railways, the only rail line of the country, operates three lines totaling 1,055 miles of main line.

NATURAL FEATURES AND RESOURCES; CLIMATE. Iraq has arid desertland west of the Euphrates, a broad central valley between the Euphrates and Tigris, and mountains in the northeast. The fertile lower valley is formed by the delta of the two rivers, which join about 120 miles from the head of the Persian Gulf. The gulf coast line is 26 miles.

Oil production is concentrated at the Baba Gurgur fields near Kirkuk, which are operated on behalf of an international group by the British-managed Iraq Petroleum Company (production 1956: 21,086,155 long tons). Associated companies operate fields at Zubair and Rumaila near Basra (1956: 8,438,969 tons) and at Ain Zalah and Butmah (1956: 1,077,954 tons). The Khanaqin Oil Company, a British Petroleum subsidiary, operates another field which produces only for local consumption (1955: about 360,000 long tons).

Oil is piped to Tripoli in Lebanon, Banias in Syria, Fao on the Persian Gulf and Haifa in Israel (suspended in 1948). The Iraqi government received \$206,500,000 in oil revenues in 1955.

Iraq's climate, generally, runs to great extremes—long hot summers and short cold winters. The area on the Persian Gulf is one of the hottest places in the world. Average temperature at Baghdad is 49° in January and 92° in July and August. The rainfall there is only about 7 inches annually.

Ireland (Republic)

Area: 26,601 square miles (not including larger water bodies).*

Population (census 1956)†: 2,894,822 (almost entirely Irish).

Density per square mile: 108.8.

President: Séan T. O'Kelly.

Prime Minister: Éamon de Valera.

Principal cities (census 1956)†: Dublin (Baile Átha Cliath), 537,878 (capital); Cork, 79,945 (seaport); Limerick (Luimneach), 50,869 (seaport); Dun Laoghaire (Kingstown), 47,335 (seaport).

Monetary unit: Irish pound.

Languages: Gaelic, English.

Religions (census 1946): Roman Catholic, 94.3%; Protestant Episcopal, 4.2%; Presbyterian, .8%; others, .7%.

* Total area: 27,136 square miles. † Preliminary figures.

HISTORY. About the beginning of the Christian Era, Ireland was divided into five kingdoms, each with its own ruler, but each subject to the overlord of all Ireland who dwelt at Tara. St. Patrick introduced Christianity in A.D. 432.

Norse depredations along the coasts, starting in 795, ended in 1014 with Norse defeat at the Battle of Clontarf by forces under Brian. In the middle of the 12th century, the Pope gave all Ireland to the English Crown as a papal fief. In 1171 Henry II of England was acknowledged "Lord of Ireland," but local sectional rule continued for centuries, and English control over the whole island was not reasonably absolute until the 17th century. By the Act of Union (1800), England and Ireland became the "United Kingdom of Great Britain and Ireland."

The great potato famine of 1846-48 took many lives and drove millions to emigrate to America.

Several home-rule bills were introduced in the English Parliament in the 19th century, but failed of passage. One was finally approved in 1914, but enforcement was suspended by the outbreak of World War I. During the war, agitation for freedom was carried on by the nationalist party, which was called Sinn Féin (Our-selves). In 1916 the British quickly suppressed the famous Easter Rebellion and executed its leaders.

After the 1918 elections, seventy-three of the Sinn Féiners elected to the English Parliament met in Dublin, proclaimed themselves an Irish Parliament, and passed a declaration of independence. The result was war between Irish nationalists and British troops from January 1919 to May 1921. A treaty ratified in December 1921 gave Ireland political status equal to that of Canada. Six Ulster counties, largely Protestant, formed a separate government as Northern Ireland, closely bound to England; the other twenty-six became the

Irish Free State. Republican extremists, headed by Éamon de Valera, refused for several years to recognize the treaty.

William Cosgrave, leader of the Sinn Féin's right wing, was President from 1922 to 1932. In the latter year, De Valera's party, Fianna Fáil, won control of the government. Under De Valera's leadership a new Constitution was adopted in 1937 making the nation, Ireland, in effect a republic.

Dr. Douglas Hyde, elected without opposition as the first President in 1938, was succeeded in 1945 by Séan T. O'Kelly, the Fianna Fáil nominee (re-elected in 1952). The country maintained strict neutrality during World War II.

De Valera's tenure as Prime Minister came to a temporary end in 1948, when the Fianna Fáil lost its absolute majority in the parliamentary elections. John A. Costello, a Fine Gael moderate, took office at the head of a six-party coalition Cabinet on Feb. 18, 1948. The last links with the British Crown were severed at midnight Apr. 17, 1949. Costello yielded to De Valera on June 18, 1951, after new elections but again took office June 2, 1954. De Valera returned, however, on Mar. 20, 1957.

GOVERNMENT AND DEFENSE. Ireland is a sovereign, independent republic. The President, directly elected for seven years, names the Prime Minister on the nomination of the Chamber of Deputies. Parliament (Oireachtas) has two houses. The Chamber of Deputies (Dáil Éireann) has 147 members elected by proportional representation for a five-year term. The Senate (Seanad Éireann) has 60 members, of whom 11 are named by the Prime Minister, 6 by the universities, and 43 from vocational panels. Its powers, however, are limited.

Party representation in the Dáil Éireann after the elections of Mar. 5, 1957, was as follows: Fianna Fáil, 78; Fine Gael, 40; Labour, 12; Farmers, 3; Clann Na Poblaigh, 1; Independents, 9.

Military service is voluntary. The army has a permanent authorized strength of 12,500. In 1938 Britain gave up its last defense posts in the republic, including those located at Cobh, Berehaven and Lough Swilly.

SOCIAL AND ECONOMIC CONDITIONS. Elementary education is free and is provided in state schools; secondary education is under private control, notably the religious orders. Technical and agricultural education is under local control, aided by state subsidies. Illiteracy is negligible. The 4,874 elementary schools had 472,536 pupils in 1954; 458 secondary schools had 56,411 in 1954-55. The University of Dublin (Trinity College), founded in 1591, had an enrollment of 1,932 in 1954-55, and the

National University of Ireland (constituent colleges at Cork, Galway, Dublin and Maynooth) had 6,406.

The majority of the people are English-speaking, although the government has attempted to promote the traditional Gaelic language, which is an essential part of the curriculum for all state schools.

Ireland is predominantly an agricultural country, with about 70 per cent of the total land area (17,000,000 acres) devoted to crops and pasture. The pastoral industry is the basis of the nation's economy, but recent years have brought a greater diversity in agriculture, marked by large increases in sugar beet and wheat production. Principal crops in 1956 were wheat, 426,000 long tons; oats, 536,000 tons; potatoes, 2,607,000 tons; sugar beets, 630,000 tons. Other staple crops are rye, flax, turnips, cabbage and hay. Livestock in June 1956 included 4,536,500 cattle, 3,439,300 sheep and 747,100 hogs. Wool output in 1956 was 17,958,574 lb. (greasy); butter, 1,264,971 cwt.

Leading manufactures are ordinarily beverages, tobacco, wood, paper, clothing, textiles and metals. The hydroelectric plant erected on the Shannon River in County Limerick provides cheap electricity for homes and factories.

Trade statistics are as follows (in millions of Irish pounds):

	1954	1955	1956
Exports	115.1	110.3	107.4
Imports	179.9	204.3	180.9

The United Kingdom (including Northern Ireland) was the leading customer in 1956 (81%). The United Kingdom was also the chief supplier (57%), followed by the U. S. (8%) and western Germany (4%). Major exports were live animals (42%), beef and veal (6%), beer (5%) and chocolate crumb (5%). Major imports were oils, fats, resins and gums, textiles, machinery and vehicles.

Railway mileage is about 2,400. The highway system totaled 48,800 miles in 1954. Shannon is an important international airport. There are 670 miles of canals and navigable waterways.

Recent finance data are as follows (in millions of Irish pounds):

	1955-56	1956-57	1957-58*
Revenue	111.7	113.4	120.0
Expenditure	112.0	119.3	120.0

* Budget estimate.

The public debt on March 31, 1957, was £385,000,000; state assets amounted to £213,000,000.

NATURAL FEATURES AND RESOURCES;
CLIMATE. Occupying the entire island except for the six northern counties of Ulster, Ireland resembles a basin—a central plain

rimmed with mountains, except in the Dublin region. The mountains are low, with the highest peak, Carrantuohill located in Kerry County, rising to a height of 3,415 feet.

The principal river is the Shannon, which begins in the north central area, flows south and southwest for about 240 miles and empties into the Atlantic. About 20 per cent of the country is covered by bogs. Among the many lakes are the famous Lakes of Killarney in the southwest county of Kerry.

In 1956 Ireland mined 197,421 long tons of coal, some gypsum, and considerable peat from its bogs, but otherwise the mineral resources are negligible, as are those of the forests. The fishing industry employs about 10,000 men. The 1956 wet-fish catch, including mackerel, herring, whiting, cod and plaice, came to a total of 364,757 cwt. valued at £754,277 (preliminary).

A moist and mild climate, with annual rainfall running between thirty and forty inches fairly evenly distributed throughout the year, is influenced by the Gulf Stream, which makes the winters warmer than in other places in the same latitude. The mean temperature at Dublin is 41.7° in January and 60.5° in July.

Israel (Republic)

Area: 7,984 square miles.

Population (est. Dec. 31, 1956): 1,872,390 (1953: Jewish, 88.9%; Moslem, 7.6%; Christian, 2.5%; others, 1.0%).

Density per square mile: 234.5.

President: Itzhak Ben-Zvi.

Premier: David Ben-Gurion.

Principal cities (est. Dec. 31, 1956): Tel Aviv-Jaffa, 371,000 (industrial center); Haifa, 160,000 (chief port); Jerusalem (Israeli sector), 149,440 (capital).

Monetary unit: Israeli pound (£I).

HISTORY. The history of Palestine, cradle of two of the great religions of the world, and homeland of the modern state of Israel, is mostly a chronicle of invasion, conquest and confusing divisions. To the ancient Hebrews it was known as the "Land of Canaan"; the name Palestine is derived from that part of the country inhabited by the Philistines of Biblical times. About 1000 B.C. the Hebrews succeeded in establishing a single monarchy, which later split up into two kingdoms—Judah and Israel. The country was subsequently invaded and overcome by many peoples, including the Assyrians, Babylonians, Egyptians, Persians, Macedonians, Romans and Byzantines. In A.D. 634-36, Palestine was wrested from the Byzantine Empire by the Arabs. Frankish Crusaders captured Jerusalem in 1099 and set up a feudal kingdom which endured until the defeat of the

Franks by Saladin (1187) and the restoration of Moslem rule. In 1516 suzerainty over the area was transferred from the Mamelukes of Egypt to the Turks. It remained part of the Ottoman Empire until World War I, when British forces under General Allenby defeated the Turks and captured Jerusalem (Dec. 9, 1917). The League of Nations mandate awarded to Great Britain was put in force on Sept. 29, 1923.

Meanwhile, a movement had been founded in 1897 by Theodor Herzl to create a Jewish homeland in Palestine, and a considerable number of Jewish immigrants had entered the country prior to World War I. On Nov. 2, 1917, official British recognition was given both to the growing Arab nationalist movement and to the Zionist aspirations by the issuance of the so-called Balfour Declaration.

The declaration was attacked by the Arabs. Throughout the period between the two World Wars, outbreaks of violence and open revolt occurred. Jewish immigration continued, especially after the rise of Hitler. A British royal commission report approved by the British government July 7, 1937, recommended the partition of Palestine into an Arab and a Jewish state separated by a mandated area in the vicinity of Jerusalem and at Nazareth. The Arabs opposed the proposal, advocating instead the establishment of an independent Palestine with full minority rights for the Jews. In May 1939, the British government issued a White Paper declaring the establishment of a Jewish state contrary to British obligations to the Arabs and promising, after a transitory period of ten years, the establishment of an independent Palestine in which Arabs and Jews would share authority in government. During the next five years, 75,000 Jews were to be allowed to enter Palestine. These proposals did not satisfy either party, and the League Mandates Commission questioned their validity, but the outbreak of World War II overshadowed all other issues.

Arab-Jewish co-operation in the war effort introduced a period of order, but the end of European hostilities in 1945 brought a renewal of friction, and the formation of the Arab League in that year served to demarcate lines of opposition. Attempts to bring Jewish immigrants into Palestine illegally were intensified thereafter, and terrorism grew apace.

Termination of the British mandate May 14, 1948, and withdrawal of British forces brought new violence. An independent state of Israel was immediately proclaimed by the Jewish National Council, and Arab forces converged on Palestine from the south, north and east, spearheaded by the crack British-trained Arab Legion of King

Abdullah of Jordan. Within a few hours Arab-Jewish hostilities were in full swing. On June 11, however, there went into effect a four-week truce supervised by Count Folke Bernadotte, Swedish U. N. mediator in Palestine. Fighting resumed on July 9, with Israeli forces gaining on all fronts except in Jerusalem, part of which had been taken by Jordan troops prior to the truce. On July 17 a second truce was effected on order of the U. N. Security Council. Bernadotte was assassinated on Sept. 17 by unidentified Jewish terrorists and his duties were taken over by Dr. Ralph Bunche of the United States. A final cease-fire took effect on Jan. 7, 1949, and an armistice agreement was concluded with Egypt on Feb. 24 and with Jordan on April 3.

During the hostilities Israel lost none of the territory allotted to it under the partition plan and increased that territory by about 50% by gaining western Galilee, a broad corridor to Jerusalem through central Palestine and part of modern Jerusalem. In April 1950, Jordan incorporated eastern and central Palestine, including the Old City of Jerusalem.

Israel's governmental structure took shape rapidly. Elections were held in Jan. 1949 for a constituent assembly, which adopted a Constitution on Feb. 14; the provisional leaders, Chaim Weizmann and David Ben-Gurion were confirmed as President and Premier, respectively. Recognized by most non-Arab countries, the new nation was admitted to the U. N. on May 11, 1949, but Israeli-Arab relations remained hostile, with frequent border incidents.

Despite many Cabinet crises, Ben-Gurion's government met with increasing success the problems arising out of an unfavorable trade balance, large numbers of immigrants and the urgent need for foreign capital investment and additional industries.

Dr. Weizmann died Nov. 9, 1952, and Itzhak Ben-Zvi was elected to succeed him as President on Dec. 8. Ben-Gurion resigned for reasons of health on Dec. 7, 1953, but took over again on Nov. 3, 1955, from Moshe Sharett, who had succeeded him.

Israeli troops invaded Egypt on Oct. 29, 1956, and quickly took the Gaza strip and almost all the Sinai peninsula up to the Suez canal. Following U. N. intervention they were gradually withdrawn.

GOVERNMENT. The Israeli Constitution adopted by the Constituent Assembly in 1949, provides a republican form of government headed by a President elected for a 5-year term by the Chamber of Deputies. Legislative power is vested in the Chamber of Deputies, the members of which are elected by the vote of all citizens who have reached the age of 21. The government is administered by the Cabinet,

which is headed by the Premier and is responsible to the Chamber of Deputies.

Elections held July 26, 1955, divided the 120 seats in the Chamber of Deputies (Knesset) as follows: Mapai (Labor), 40; Herut, 15; General Zionist (rightist), 13; National Religion Front, 11; Achdut Avoda (Marxist), 10; Mapam, 9; Communists, 6; others, 16.

The Constitution characterizes Israel as the national home of the Jewish people and directs the admission of every Jew who desires to settle within its borders, subject to control of the Chamber of Deputies. Between May 1948 and Dec. 31, 1956, 830,000 Jewish immigrants entered Israel; the peak year was 1949 (239,141).

Military service is compulsory. The army had 50,000 men on active duty in 1956 with 200,000 in ready reserve. The navy on Dec. 31, 1956, had 2 destroyers, 3 frigates and escort vessels and several other smaller craft.

SOCIAL AND ECONOMIC CONDITIONS. Education is under the supervision of the Ministry of Education. Kindergarten and elementary education is free; most secondary schools are semiprivate. In 1954-55 there were 929 elementary schools with 232,205 pupils and 79 secondary schools with 22,400 pupils. The Hebrew university in Jerusalem had 3,150 students in 1955.

Agriculture is the chief economic activity. The maritime plain, the plain of Esdraelon and the northern Jordan valley are the principal agricultural areas. Citrus growing, confined largely to the maritime plain, normally furnishes the major export crop. Production (1955-56) was 452,000 metric tons. Others include olives, rice, fruits and vegetables, figs, tobacco, wheat, barley, corn, sesame and potatoes. There are many collective rural settlements.

Industry is developing rapidly, especially the food-processing, textile, metalworking and chemical groups. Diamond cutting, although dependent on rough diamond imports, is of major importance; and there are oil refineries and storage tanks at Haifa, a terminus of the pipeline from the Iraqi oil fields (suspended since 1948).

Recent foreign-trade statistics are as follows (in millions of Israeli pounds):

	1954*	1955*	1956*
Exports	132.5	162.4	193.0
Imports	438.8	585.0	655.2

* Calculated at the rate to £1 1.80 = U.S. \$1.00.

Chief exports in 1956 were citrus fruits (41%) and polished diamonds (23%). Leading customers were Britain (21%), the U. S. (17%) and Belgium (6%); leading suppliers, the U. S. (31%), western Germany (18%) and Britain (10%). Leading imports were wheat (7%), rough diamonds (6%) and iron and steel bars (3%).

Internal communication is provided by 393 miles of railway (in operation, 1957) and a good highway network totaling 1,760 miles (1957). The excellent airport at Lydda, near Tel Aviv, is served by major international lines and El Al, Israel's international line, which flew 2,681,365 miles and carried 34,462 passengers in 1955. The merchant marine had 43 vessels (100 tons and over) aggregating 148,273 gross tons on June 30, 1956.

Israel has been heavily dependent on international loans. Recent public finance data are as follows (in millions of Israeli pounds):

	1955-56	1956-57*	1957-58*
Revenue†	775.4	769.3	969.0
Expenditure	778.3	769.3	969.0

* Budget estimate. † Includes proceeds of loans and counterpart funds.

On Dec. 31, 1956, the foreign debt was £1373,145,000 and the internal debt, £1411,830,000.

NATURAL FEATURES AND RESOURCES; CLIMATE. Northern Israel is largely a plateau traversed from north to south by mountains and broken by great depressions, also running from north to south.

The maritime plain of Israel is remarkably fertile, but the southern Negev region, which comprises almost half the total area, is largely a wide desert steppe area. The Jordan, the only important river, rises in Syria and flows along the Jordan border through the Hule marshes and lake and the Sea of Tiberias (Galilee) into Jordani Palestine and thence into the Dead Sea, 1,290 feet below sea level.

Mineral resources are limited. They include gypsum, sulfur, limestone, and rock salt, together with potash and bromine from the Dead Sea.

Summers are hot and dry, with occasional maximum temperature of 100°. The mean annual temperature at Jerusalem is 62.8°. Rainfall occurs chiefly in the autumn and spring; the mean annual average is 28 inches along the coast and 26 inches in Jerusalem.

Italy (Republic)

(Repubblica Italiana)

Area: 116,316 square miles.
Population (est. Dec. 1, 1956): 48,324,000* (predominantly Italian).
Density per square mile: 415.5.*
President: Giovanni Gronchi.
Premier: Adone Zoli.
Principal cities (census 1951): Rome, 1,606,739 (capital); Milan, 1,264,402 (leading financial, industrial center); Naples, 1,003,815 (seaport); Turin, 711,492 (auto works); Genoa, 678,200 (seaport); Palermo, 482,594 (Sicilian seaport).

Monetary unit: Lira.
Religions: Roman Catholic, 99.6%; others (Protestant, Orthodox, Jewish), .4%.

* Population present.

HISTORY. Modern Italy did not exist as a unified country until 1870. Until A.D. 476, when the German Odoacer became head of the Roman Empire in the west, the history of Italy was largely the history of Rome. From A.D. 800 on, the Holy Roman Emperors, the Popes, Normans, Lombards and Saracens all vied for control over various segments of the Italian peninsula. Numerous city states, such as Venice and Genoa, and many small principalities flourished in the late Middle Ages.

In 1713, after the War of the Spanish Succession, Milan, Naples and Sardinia were handed over to Austria, but the Hapsburg influence on the peninsula was interrupted for a short time after 1800 when Italy was unified by Napoleon, who crowned himself King of Italy on May 26, 1805. After the Congress of Vienna in 1815, Austria continued to be the dominant power in Italy.

The movement for national unity began in the middle 19th century, staged by the "Young Italy" group headed by Giuseppe Mazzini. In 1858 Count Cavour, Prime Minister under King Victor Emmanuel II of Sardinia, secured the aid of Napoleon III of France in unifying Italy. After French and Sardinian forces had defeated the Austrians in 1859, Lombardy was annexed to Sardinia, and by the time the first Italian Parliament opened at Turin in Feb. 1861, all Italy was represented except Venetia, held by Austria, and Rome, which was the territory of the Pope. On February 18, 1861, Victor Emmanuel II was proclaimed King of united Italy.

In 1866 Italy sided with Prussia against Austria and received Venetia; Rome was seized in 1870. In 1882 the young nation entered into the Triple Alliance with Austria and Germany. After war with Turkey in 1911-12, the Italians were awarded Tripoli in North Africa and the Dodecanese islands in the Aegean Sea.

Italy denounced the Triple Alliance on May 3, 1915, and declared war on Austria on May 24. By the treaty of St. Germain, on Sept. 10, 1919, the south Tirol (Upper Adige) and the Istrian peninsula were awarded to Italy.

In the years immediately following World War I, Italy was a virtual battleground between the Socialists and Benito Mussolini's new Fascist movement. The weak government was powerless to maintain order as the two sides fought for power. Finally, on Oct. 30, 1922, the Fascists staged their "March on Rome" and took over the government. Mussolini was named Premier by King Victor Emmanuel III. He Duce and his Fascist Grand Council

soon made Italy into a corporate state, with himself as dictator.

In 1935-36 Italy successfully invaded, conquered and annexed Ethiopia, despite the complaints of the League of Nations and economic sanctions.

On November 6, 1937, Italy joined the German-Japanese anti-Comintern pact and on December 11 withdrew from the League of Nations. The Rome-Berlin Axis was converted into a full military alliance on May 22, 1939. Meanwhile, Italian troops had seized Albania in April, 1939.

On June 10, 1940, Mussolini suddenly announced Italy's declaration of war against France (already in the throes of defeat) and Britain. Italian troops were able to advance only a few miles into France before the armistice was concluded on June 24, under which Italy annexed a small strip of France. On October 28, 1940, Italian forces invaded Greece from Albania, but were driven back by the Greeks, who held a third of Albania by the time the Germans launched their Balkan campaign on April 6, 1941. Italy subsequently occupied parts of Yugoslavia and Greece. Following the German capitulation in North Africa and the fall of Sicily, Mussolini was ousted on July 25, 1943, and Marshal Pietro Badoglio formed a new government. On September 3, 1943, the date of the invasion of the Italian mainland by Allied forces, a military armistice was signed between Eisenhower and Badoglio.

On June 9, 1944, five days after the Allies entered Rome, Badoglio was succeeded as Premier by Ivanoe Bonomi, a Socialist, who formed a coalition Cabinet. The government was recognized by the Allies as the *de facto* government of Italy on October 25, but only as a cobelligerent, not as an ally.

Upon the collapse of German resistance in the north, Mussolini was tracked down and put to death by partisan forces on April 28, 1945. On December 10, Alcide de Gasperi, a Christian Democrat, took over from Ferruccio Parri, who had succeeded Bonomi as Premier in June.

On June 2, 1946, the Italian people voted in favor of a republic, and King Humbert II, who had succeeded his father on May 9, went into exile.

The new Constitution drafted by the constituent assembly took effect on Jan. 1, 1948. Following the Communist defeat in the election of April 1948, De Gasperi formed another coalition Cabinet from which the Communist and left-wing Socialist bloc was again excluded. Luigi Einaudi, veteran Liberal leader, was elected first President of the Republic on May 11. In April 1949, Italy adhered to the North Atlantic pact.

De Gasperi's centrist coalition lost ground to both leftist and rightist groups in parliamentary elections held June 7-8, 1953. He gave way on Aug. 17 to Giuseppe Pella, who formed an all Christian Democrat Cabinet. Pella was succeeded by coalition cabinets headed by Mario Scelba (Feb. 10, 1954), Antonio Segni (July 6, 1955) and Adone Zoli (May 19, 1957). Meanwhile, on Apr. 29, 1955, Giovanni Gronchi, a liberal Christian Democrat, had been elected to succeed Luigi Einaudi as President.

GOVERNMENT. Under the 1947 Constitution Italy is a "democratic republic founded on labor." The President is elected for seven years by Parliament in joint session with regional delegates. The Cabinet, headed by the Premier and nominated by the President, must enjoy the confidence of Parliament, which is composed of the Chamber of Deputies, popularly elected for a five-year term, and the Senate. All citizens are duty-bound to vote.

The Chamber of Deputies elected on June 7-8, 1953, had 590 members, of whom 261 were Christian Democrat, 143 Communist, 75 leftwing Socialist, 40 monarchist, 29 Social Movement (neo-Fascist) and 42 members of other parties. The Senate has 242 members.

PEACE TREATY OF 1947. The peace treaty which took effect Sept. 15, 1947, required Italian renunciation of all claims in Ethiopia and Greece, the cession of the Dodecanese to Greece, and of five small Alpine areas to France. In addition, the major part of the Istrian peninsula, including Fiume and Pola, went to Yugoslavia. The Free Territory of Trieste was carved out of the area to the west of the new Yugoslav frontier.

Italy was to pay reparations of \$100,000,000 in kind over a seven-year period to the Soviet Union, \$125,000,000 to Yugoslavia, \$105,000,000 to Greece, \$25,000,000 to Ethiopia and \$5,000,000 to Albania; also to make two-thirds restitution for war-time damage to Allied property in Italy.

Zone A of Trieste (90 sq. mi.), including the city of Trieste, was transferred to Italy in Oct. 1954 and the remainder to Yugoslavia.

DEFENSE. Most of the defensive restrictions which were imposed by the 1947 treaty were lifted in Dec. 1951 over the objections of the U.S.S.R.

The navy in Dec. 1956 had 2 battleships, 3 cruisers, 7 destroyers, 40 frigates and escort vessels, 5 submarines and many other smaller craft.

SOCIAL AND ECONOMIC CONDITIONS.

Education. Elementary education is free and compulsory from 6 to 14. Elementary schools numbered 41,119 in 1953-54, with 4,554,422 pupils; the 3,275 secondary

schools had 628,680 students. In 1954, 152 institutions of higher learning, including 28 universities, had 211,128 students. Illiteracy is about 10%.

Religion. Although the country is predominantly Roman Catholic, religious freedom is permitted. Catholic religious teaching is given in all elementary and intermediate schools. Relations with the Church are regulated by the treaty with the Holy See of Feb. 11, 1929, which established the temporal power of the Pope over Vatican City.

Agriculture. Agriculture, the most important branch of Italy's economy, engages more than a third of the population. It is extremely diversified; differences of altitude, soil and climate allow the production of all European crops from rye to rice, from apples to oranges, and from hemp to cotton. Approximately 41,050,000 acres are cultivated. Italy ranks next to France in wine production (average 1951-55: 1,299,500,000 U. S. gal.; 1956: 1,580,000,000 gal.) and next to Spain in olive oil production.

Crop data (in thousands of metric tons):

	1954	1955	1956*
Wheat	7,282	9,504	8,681
Rye	115	123	107
Barley	278	292	275
Oats	546	523	506
Maize	2,963	3,204	3,410
Beet sugar	884	1,182	970
Olive oil	286	181	135

* Provisional.

Livestock and dairy farming are important in Italy. Of the 50-odd varieties of Italian cheese, the best known are the hard parmesan and pecorino (the latter made from ewe's milk) and the soft bel paese and gorgonzola. Cheese production in 1955 totaled 348,000 metric tons. In 1954 Italy had 9,033,000 cattle, 9,746,000 sheep and 3,746,000 hogs. Wool production (1956) totaled about 8,000 metric tons (clean basis).

Industry. Industrial production is centered in the north. The nature of the fascist corporate state had a tendency to foster industrial concentration prior to World War II. The textile industry is the largest and most important and supplies the home market as well as furnishing a large proportion of Italy's exports. The metal industries are handicapped by lack of coal, which must be imported in large quantities, and by insufficient iron ore reserves. The chemical, clothing and food industries are also important. Italy is a member of the European Coal and Steel Community.

Production in 1956 included cotton yarn, 153,600 metric tons; woven cotton fabrics, 106,320 tons; rayon yarn, 65,760 tons; pig iron and ferroalloys, 1,995,728 tons; raw

steel, 5,770,364 tons; cement, 10,788,817 tons; automobiles, 279,712; trucks, 36,292.

Trade. Statistics of Italy's foreign trade, in billions of lire, are as follows:

	1954	1955	1956
Exports	1,024	1,160	1,348
Imports	1,524	1,695	1,981

Italy's leading customers by value in 1956 were western Germany (13%), the U. S. (10%), Switzerland (7%) and France (7%). Main suppliers were the U. S. (16%), western Germany (12%), Britain (5%), Iraq (5%) and France (5%). Leading exports were machinery and vehicles, fruits and vegetables, synthetic fibers and manufactures and cotton and manufactures. Leading imports included cotton, coal and coke, wool, grain and petroleum and products.

Communications. According to *Lloyd's Register*, the merchant marine had 1,196 ships (100 tons and over) aggregating 4,196,762 gross tons on June 30, 1956. On Mar. 31, 1957, 84 vessels of 668,660 gross tons were under construction in Italian yards. There are more than 150 seaports, of which the principal are Genoa, Venice, Naples, Leghorn and Trieste. Coastwise traffic is particularly important because of difficult land communications. State railways in 1954 totaled 10,500 miles. Highways totaled about 110,000 miles.

Finance. Data (in billions of lire):

	1954-55*	1955-56*	1956-57†
Revenue	2,311.6	2,509.9	2,671.0
Expenditure	2,618.5	2,809.9	2,990.9

* Provisional. † Budget estimate.

The total internal debt was 4,629,700,-000,000 lire on Nov. 30, 1956.

NATURAL FEATURES AND RESOURCES; **CLIMATE.** Approximately 600 of boot-shaped Italy's 708 miles of length are in the long peninsula that projects into the Mediterranean from the fertile basin of the Po River. The Apennines, branching off from the Alps between Nice and Genoa, form the peninsula's backbone, and rise to a maximum height of 9,560 feet at the Gran Sasso d'Italia (Corno). The Alps are Italy's northern boundary.

Several islands form part of Italy. Sicily, 9,926 square miles, lies off the toe of the boot, across the Strait of Messina, with a steep and rock-bound northern coast and gentler slopes to the sea in the west and south. Mt. Etna, an active volcano, rises to 10,741 feet, and most of Sicily is more than 500 feet in elevation. Sixty-two miles southwest of Sicily lies Pantelleria, 45 square miles, and south of that are Lampedusa and Linosa. Sardinia, 9,301 square miles, just south of Corsica and about 125 miles west of the mainland, is mountainous, stony and unproductive.

Italy has many northern lakes, lying below the snow-covered peaks of the Alps. The largest are Garda (143 sq. mi.), Magglore (83 sq. mi.) and Como (55 sq. mi.). The Po, the principal river, rises in the Alps on Italy's western border and crosses the Lombard plain to the Adriatic.

Natural Resources. Italy is ordinarily the world's largest producer of mercury; it is also an important producer of sulfur. The nation lacks, however, the staple minerals of coal, oil and iron, and is forced to import them. Building stone, particularly marble, is plentiful. Recent production data are as follows (in thousands of metric tons):

	1954	1955	1956
Bauxite	295	326	260
Coal	1,074	1,135	1,077
Lignite	638	418	402
Iron ore	1,093	1,383	1,668
Lead*	37	42	39
Mercury	1,878†	1,845†	2,135†
Petroleum	534‡	1,573‡	4,358‡
Sulfur	227	202	195

* Metal content. † Tons. ‡ Thousands of barrels.

In the south Tirol and in the central Apennines, abundant hydroelectric power resources and deposits of natural gas are being increasingly exploited. In 1956 Italy generated 39,751,559,000 kwh. of electricity, mostly by hydroelectric plants; natural gas production totaled 4,466,401,-000 cu. m.

Forests. Less than 20 per cent of Italy's area is forested. Principal products are soft and hard timber, charcoal and cork. The fishing industry does not fill domestic needs. Coral and sponges are marketed.

Climate. Italy's climate is variable. The Italian Riviera along the Gulf of Genoa is subtropical and highly favored by tourists. The winters in the high Apennines are cold and bitter. The western slope of peninsular Italy is warmer than the eastern side, and the Po basin in the north has cold winters and very hot summers. Sicily has a warm and equable climate. In Rome, December through February are the coldest months (average 47°), July and August the warmest (75°), with abundant sunshine. Rainfall is heaviest in the Alps and lightest in the lowlands (33 inches a year at Rome).

FORMER ITALIAN COLONIAL EMPIRE

Under the 1947 treaty, Italy ceded the Dodecanese to Greece and renounced title to her African possessions, which consisted of Libya, Eritrea and Italian Somaliland. Somaliland (now known as Somalia) remained under Italian administration as a U. N. trust territory.

SOMALIA—Status: U. N. trust territory under Italian administration.

Area: 198,275 square miles.

Population (est. 1954): 1,268,000.

Administrator: Enrico Anzillotti.

Capital: Mogadiscio (population: 74,000).

Foreign trade (1956): exports, 64,981,100 somali* (73% to Italy); imports, 114,879,000 somali (44% from Italy). Chief exports: bananas (59%), hides and skins (12%), cotton (7%).

Agricultural products: dressed skins, cattle, sugar, cotton, cottonseed oil, fruits, bananas (exports 1956: 36,717 metric tons).

Forest products: gum, resin, kapok.

Mineral: tin.

* One somali = 14 cents U.S.

Somalia, a territory extending along Africa's east coast from the Gulf of Aden south to Kenya, fell within the Italian sphere of influence by treaties with the Somali Sultans in 1889 and by agreements with Britain in 1905 and 1924, with the Sultan of Zanzibar in 1905, and with Ethiopia in 1907. After the conquest of Ethiopia in 1936, the area was incorporated into Italian East Africa. It was occupied in Feb. 1941 by British troops.

On Apr. 1, 1950, Somalia became a U. N. trust territory. Administration is in the hands of Italy for 10 years during which it is to be prepared for independence.

The 60 seats in the Legislative Assembly were filled on Feb. 29, 1956, in the first general election ever held in Somalia.

The overwhelming majority of the population are Somalis who belong to the Sunni sect of Islam; they are a pastoral, nomadic people whose livelihood depends on cattle, sheep and camels. However, the Italians (numbering 4,858 in 1954) established plantations in the south, especially in the fertile Juba region. The territory is far from self-supporting, requiring heavy Italian subsidy. The climate is torrid.

Japan (Empire) (Nippon)

Area: 142,801 square miles.

Population (est. July 1, 1956): 90,017,000.

Density per square mile: 630.4.

Ruler: Emperor Hirohito.

Premier: Nobusuke Kishi.

Principal cities (census 1955)*: Tokyo, 6,966,499 (capital; financial, manufacturing center); Osaka, 2,547,321 (chief industrial center); Nagoya, 1,336,779 (machinery, textiles); Kyoto, 1,204,017 (manufacturing); Yokohama, 1,143,287 (seaport); (census 1950) Kobe, 765,435 (seaport, shipbuilding); Fukuoka, 392,649 (seaport, textiles); Sendai, 341,685 (manufacturing, educational center).

Monetary unit: Yen.

Language: Japanese.

Religions (1938): Buddhism, 60%; Shintoism, 21%; Protestant (215,166); Roman Catholic (118,856).

* Preliminary figures.

HISTORY. Japan's early history is inseparable from mythology. A series of legends attributes the creation of Japan to the sun goddess, from whom the later emperors were allegedly descended. The first of them was Jimmu Tennō, supposed to have ascended the throne on Feb. 11, 660 B.C.

Recorded Japanese history begins with the first contact with China in the 5th century A.D. Japan was then divided into strong feudal states, all nominally under the Emperor, but with real power often held by a court minister or clan. In 1185 Yoritomo, chief of the Minamoto clan, was designated Shogun (Generalissimo) with the actual administration of the islands under his control. Clans came and went, but a dual government system—Shogun and Emperor—persisted till 1867.

First contact with the West came about 1542, when a Portuguese ship off course arrived in Japanese waters. Portuguese traders, Jesuit missionaries, and Spanish, Dutch and English traders followed. Suspicious of Christianity and of Portuguese support of a local Japanese revolt, the shoguns restricted all foreigners in 1636-38 except the Dutch, who were confined to Nagasaki. Western attempts to renew trading relations failed until 1853, when Commodore Matthew Perry sailed an American fleet into Tokyo Bay.

Japan now quickly made the transition from a medieval to a modern power. Feudalism was abolished and industrialization was speeded. An imperial army was established with conscription. The shogun system was abolished in 1867 by Emperor Meiji, and parliamentary government was established in 1889. After a brief war with China in 1894-95, Japan acquired Formosa (Taiwan), the Pescadores islands, and part of southern Manchuria. China also recognized the independence of Korea (Chosen), which Japan later annexed (1910).

In 1904-05 the new Japan won prestige by defeating Russia in the Russo-Japanese War, gaining the territory of southern Sakhalin (Karafuto) and Russia's port and rail rights in Manchuria. In World War I, Japan, which took a negligible part in military operations, seized Germany's Pacific islands and leased areas in China. The Treaty of Versailles then awarded her a mandate over the islands.

At the Washington Conference of 1921-22, Japan agreed to respect Chinese national integrity. The series of Japanese aggressions which was to lead to the nation's downfall began in 1931 with the invasion of Manchuria. The following year, Japan set up this area as a puppet state, "Manchukuo," under Emperor Henry Pu-Yi, last of China's Manchu dynasty. On Nov. 25, 1936, Japan joined the Axis by signing the anti-Comintern pact. The invasion of

China came the next year, and the Pearl Harbor attack on Dec. 7, 1941.

For many months after Pearl Harbor, the Japanese army and navy enjoyed spectacular success, but by the end of 1942 the tide had begun to turn. Three years later the dropping of the world's first atomic bomb in combat on Hiroshima, followed by a second one on Nagasaki, knocked Japan swiftly into a surrender that already had become inevitable.

The formal surrender took place Sept. 2, 1945, aboard the battleship *Missouri* in Tokyo Bay. Southern Sakhalin and the Kurile Islands reverted to Russia, and Formosa (Taiwan) and Manchuria to China. The Pacific islands remained under U. S. occupation.

General of the Army Douglas MacArthur was appointed Supreme Commander for the Allied Powers (SCAP) Aug. 14, 1945. An 11-power (later 13-power) Far Eastern Commission was created to lay down occupation policies, while the 4-power Allied council advised and consulted with SCAP in carrying them out.

Soon after the surrender, Japan began the process of democratizing its political, social and economic structure under Allied eyes. Following the Socialists' victory in elections of April 20, 1947, Japan's first Socialist Premier, Tetsu Katayama, a life-long Christian, formed a coalition Cabinet. Hitoshi Ashida (Feb. 21, 1948) and Shigeru Yoshida (Oct. 14, 1948) followed him in office.

Pres. Truman removed Gen. MacArthur from his post as Supreme Commander for the Allied Powers on April 11, 1951, and named Gen. Matthew B. Ridgway in his place.

On Sept. 8, 1951, a treaty of peace with Japan was signed at San Francisco by the U. S. and 47 other nations. The U.S.S.R., Czechoslovakia and Poland were present at the conference but did not sign the treaty, which became effective April 28, 1952.

The treaty did not place any restrictions on Japan's political institutions, economy or armed forces. Japan was limited in territory to its 4 home islands, although the treaty did not recognize Soviet seizure of the Kurile Islands and South Sakhalin.

The state of war with the U.S.S.R. was ended by a declaration ratified by the U.S.S.R. on Dec. 9, 1956. Following an overwhelming Conservative victory in the Oct. 1952 elections, Yoshida was re-elected Premier. Ichiro Hatoyama, leader of the newly formed Democratic party, succeeded him on Dec. 9, 1954. The Democrats won the most seats in elections held Feb. 27, 1955 and Hatoyama was re-elected Premier on March 18, 1955. Tanzan Ishibashi (Dec. 20, 1956) and Nobusuke Kishi (Feb. 24, 1957) followed in office.

GOVERNMENT AND DEFENSE. The Constitution, effective May 3, 1947, made drastic changes in Japan's political system. The Emperor retains only ceremonial functions, and executive power is vested in the Cabinet, headed by the Premier and collectively responsible to the Diet. Law-making power is vested solely in the Diet, composed of two houses—the House of Representatives, popularly elected for four-year terms, and the House of Councillors, with 250 members elected for six-year terms. A bill of rights guarantees certain basic liberties. Women are enfranchised for the first time. Sovereignty, formerly vested in the Emperor, now is vested in the people, and the House of Representatives can override the veto of the House of Councillors by a two-thirds vote.

The elections of Feb. 1955 distributed the 467 seats in the House of Representatives as follows (1953 standing in parentheses): Democratic, 185 (0); Liberal, 112 (199); left-wing Socialist, 89 (72); right-wing Socialist, 67 (66); Communist, 2 (1); others, 12 (129, including 76 Progressives and 35 dissident Liberals).

Ruler. Emperor Hirohito, born April 29, 1901, succeeded his father, Yoshihito, on Dec. 25, 1926. He was married on Jan. 26, 1924, to Princess Nagako, born in 1903. To them were born two sons, Crown Prince Akihito (Dec. 23, 1933) and Prince Masahito (Nov. 28, 1935), and 5 daughters. Succession to the Japanese throne is in the male line only.

Defense. The peace treaty of 1951 placed no limitations on the right of Japan to rearm, but the Constitution prohibited the maintenance of armed forces. A national "police" reserve was created in 1950, and legislation enacted in June 1954 provided for the creation of Japanese military, naval and air "defense" forces, to be built up over a period of 8 years (strength in May 1956 was 170,500), each service to have its own general staff. The new Japanese navy had 4 destroyers, 29 frigates and escort vessels and 1 submarine in Dec. 1956. The U. S. began to deliver jet fighters to the Japanese air force in 1954-55.

The bilateral defense pact between the U. S. and Japan which became effective April 28, 1952, provided for the indefinite disposition of U. S. armed forces in and about Japan. The U. S. was to furnish about \$150,000,000 in defense equipment under a mutual defense assistance agreement signed March 8, 1954.

SOCIAL AND ECONOMIC CONDITIONS. **Education.** Article 26 of the 1947 Constitution provides that "all people shall have the right to receive an equal education correspondent to their ability," and that education shall be free and compulsory as provided by law. A 1947 law provided, a simplified school structure with 6 years of

elementary education (compulsory), 3 of lower secondary, 3 of upper secondary and 4 of university education. In 1954 Japan had 22,036 elementary schools with 11,750,925 pupils, 15,906 secondary schools with 8,209,320 pupils and 528 colleges and universities with 565,453 students.

Agriculture. Japan is traditionally a land of small farms and, except in Hokkaido, the northernmost island, there is almost no large-scale farming and animal husbandry. The average holding is less than three acres. Double cropping makes self-sufficiency possible, but on a low level of subsistence.

Major crops (thousands of metric tons):

	1954	1955	1956*
Rice (rough)	11,392	14,818	13,088
Barley	2,583	2,408	2,340
Wheat	1,516	1,468	1,375
Potatoes	2,743	2,908	2,703
Sweet potatoes	5,226	7,108	7,073

* Preliminary.

Production of silk cocoons (1956) was 108,170 metric tons; tea, 59,130 tons. In 1956 there were 3,202,000 cattle, 1,160,000 hogs and 893,000 sheep.

Industry. Prewar Japan was one of the world's leading industrial nations and the only country in the Far East with highly developed textile, steel, machinery, chemical and electrical industries. The textile industry was dominant, but after 1931 considerable expansion took place in the heavy industries—metal, machinery-building and chemical—which were adaptable to war purposes.

Postwar industrial rehabilitation proceeded slowly at first, but by the end of 1956 average industrial output was more than twice the 1934-36 level. In 1954 there were 184,487 factories employing 4 or more persons, with total employment of 4,963,618 in 1955. Japan led the world in shipbuilding in 1956, completing vessels aggregating 1,538,000 gross tons, many of them super tankers.

INDUSTRIAL PRODUCTION (thousands of metric tons)

	1954	1955	1956
Pig iron and ferroalloys	4,608	5,217	5,987
Steel ingots	7,750	9,408	11,106
Cement	10,675	10,557	13,024
Cotton yarn	1,024*	923*	1,087*
Cotton fabrics	3,184†	3,018†	3,480†

* Millions of lbs. † Millions of sq. yds.

The huge interlocking monopolies (*Zai-batsu*) controlling prewar business and finance were dissolved in 1945, and reconcentration was prohibited by postwar legislation.

Trade. Before World War II, Japan ranked fifth in world trade. Private trade

was resumed in 1947; by the mid-1950s, Japan had regained its place in world trade. Recent data are as follows (in millions of U. S. dollars):

	1954	1955	1956*
Exports	1,629.3	2,010.6	2,501.0
Imports	2,399.4	2,471.4	3,229.6

* Provisional.

Leading customers in 1956 were the U. S. (22%), Hong Kong (5%), India (4%) and Malaya (3%); leading suppliers, the U. S. (33%), Australia (8%), Canada (4%) and Malaya (4%). Leading exports were textiles (35%), machinery (19%), iron and steel and manufactures (9%) and chemicals (4%). Imports included raw cotton (15%), petroleum and products (10%), wool (7%), wheat (5%) and iron ore (5%).

Communications. Before World War II the merchant marine carried almost 80 per cent of the foreign trade and was surpassed only by those of the U. S. and Britain. Wartime losses were enormous, but recovery was fairly steady. By June 30, 1956, there were 1,891 vessels (100 tons and over) with a gross tonnage of 4,075,481, according to *Lloyd's Register*.

Railway mileage in 1955 was 17,255. The national and prefectural highway system totaled 87,400 miles in 1953.

Finance. World War II left Japan with a staggering public debt, mounting inflation and a disorganized financial system. Recent data on general account (in billions of yen) are as follows:

	1954-55*	1955-56*	1956-57†
Revenue	1,185.1	1,126.4	1,034.9
Expenditure	1,040.8	1,018.2	1,034.9

* Provisional. † Budget estimate.

The national debt totaled 989,532,000,000 yen on March 31, 1957.

NATURAL FEATURES AND RESOURCES; CLIMATE. Japan's four main islands are Honshu, Hokkaido, Kyushu and Shikoku. The Ryukyu chain to the southwest is U. S. occupied and the Kuriles to the northeast are Russian occupied. The surface of the main islands consists largely of mountains separated by narrow valleys. There are about 50 more or less active volcanoes, including famous Fujiyama near Tokyo (12,385 ft.).

Minerals. Japan is relatively poor in minerals, and large imports of coal, petroleum and iron ore are necessary. Production in 1956 included coal, 46,555,000 metric tons; petroleum, 2,175,000 barrels; iron ore concentrates (55% metal content), 1,052,000 tons. In that year 3,821,000 tons of coal and 7,869,000 tons of iron ore were imported. Other minerals include lead, silver, gold and copper.

Forests. Japan is well-wooded, with about 60,000,000 acres of forest. Among forest products are bamboo, charcoal and timber. Wood pulp production in 1956 totaled 1,801,988 long tons; newsprint (1955), 460,000 metric tons; lumber (1955), 15,723,000 cubic meters.

Fisheries. Fishing, one of Japan's biggest industries, provides a staple food and considerable exports in normal years. The catch in 1955 amounted to 4,720,900 metric tons.

Climate. The Japanese climate ranges from subtropical in its southern extremes, to winter cold and snow in Hokkaido. The winter temperatures are moderated in the central islands by the Japan Current. The mean annual temperature in Tokyo is 56° and the capital's annual rainfall amounts to 60 inches.

Jordan (Hashemite Kingdom of)

Area: 37,264 square miles.*

Population (est. 1956): 1,471,000.*

Density per square mile: 39.5.*

Ruler: King Hussein I.

Prime Minister: Hussein Fakhri el-Khalidi.

Principal cities (est.): Amman, 202,000 (capital); Jerusalem (Jordanian sector), 75,000 (religious center).

Monetary unit: Jordanian dinar.

Language: Arabic.

Religions: Moslem (Sunni), 92%; Christian, 8%.

* Including Arab Palestine (area: 2,125 sq. ml.; population 1953, 745,786).

HISTORY. Jordan, once the Lordship of Oultre-Jourdain in the Latin Kingdom of Jerusalem, attracted world-wide attention in 1948 when its King, Abdullah, led Arab forces in the invasion of Palestine from the east. An ancient land, about the size of Indiana, the small kingdom was known in the time of Moses as Edom and Moab. It passed to the Amorites of Damascus and in A.D. 106 became part of the Roman province of Arabia. In 633-36 it was conquered by the Arabs, and a period of decline and depopulation ensued. It fell to the Turks in the 16th century.

Conquered from the Turks by the British in World War I, Jordan was separated from the Palestine mandate in 1920, and placed in 1921 under the rule of Abdullah ibn Hussein.

In 1923 Britain recognized Jordan's independence, subject to the mandate. During World War II, Jordan co-operated completely with Britain. On March 22, 1946, Britain abolished the mandate and recognized the full and complete independence of Jordan. That part of Palestine occupied by Jordan troops was formally incorpo-

rated by action of the Jordan Parliament on Apr. 24, 1950. Jordan's rejection of the Baghdad pact in Dec. 1955 set off a period of instability and tension.

Abdullah was assassinated June 20, 1951. His son Talal was deposed as mentally ill Aug. 11, 1952. Talal's son Hussein, born May 2, 1935, succeeded him.

GOVERNMENT AND DEFENSE. Jordan is a constitutional monarchy. The King rules with the aid of a Cabinet of department heads responsible to Parliament, which consists of the popularly elected Chamber of Deputies of 40 members and the Senate of 20 appointed members. Arab Palestine is represented in both bodies.

Defense of the country is entrusted to the British-trained Arab Legion of about 20,000 men, the most effective force among all Arab armies. The Anglo-Jordanian treaty of Mar. 20, 1948, which had mutual assistance provisions, was terminated Mar. 13, 1957. Jordan had ousted the Legion's British commander on March 2, 1956, and Britain recalled most of its remaining military officers. In Jan. 1957 Egypt, Saudi Arabia and Syria agreed to provide the equivalent of the former British defense subsidy.

SOCIAL AND ECONOMIC CONDITIONS. Life in Jordan is primitive; there are estimated to be 50,000 nomads and 120,000 seminomads. At least 95 per cent of the total area is desert. At least one-half the population is believed to be illiterate. In 1952 there were 783 elementary and 71 intermediate secondary schools with total enrollment of 139,000.

Most of the country is suitable only for pasturing sheep, goats and camels. Cultivated land is limited to a relatively small area west of the Hejaz Railway. In the drier cultivated areas of the plateau, the inhabitants retain tribal organization and still live in tents. Foreign trade is limited to the exchange of wheat, fresh fruit, wool and live animals for sugar, tea, and other necessities. Exports in 1954 were 2,823,737 dinars; imports, 19,840,468 dinars. Leading suppliers in 1954 were Britain (15%), the U. S. (10%) and western Germany (5%). Most of the exports go to neighboring Arab countries.

Despite the sparse settlement of the country, Jordan has good roads to Israel, Syria and Iraq. It is crossed from north to south by the Hejaz Railway.

TOPOGRAPHY AND CLIMATE. Jordan is mainly a plateau with an average altitude of 3,000 feet, sloping gently eastward. The western edge is a steep slope overlooking the Rift Valley (Jordan River, Dead Sea and Wadi el Araba) 3,000-4,000 feet below. In the south are mountains over 5,000 feet high and a sandstone area cut by deep

canyons. Jordanian Palestine is largely a hilly plateau. Jordan borders on the Red Sea for a few miles in the southwest. The subtropical steppe and desert have wet cold winters and dry hot summers. Rain-fall near the escarpment decreases from about 26 inches in the north to 10 inches in the south. Average maximum temperature in August is 92°; average minimum in January is 39°.

Korea (Chosen; Chosŏn)

Area: 85,266 square miles.

Population (est. 1955): 28,600,000 (almost entirely Korean).

Density per square mile: 335.4.

President, South Korea: Syngman Rhee.

Premier, North Korea: Kim Il-sung.

Principal cities (est. 1955): Seoul, 1,300,000 (capital, south Korea); Pusan, 840,000 (chief port); (est. 1952) Pyongyang, 500,000 (capital, north Korea); (est. 1949) Taegu, 313,705 (silk center); Inchon, 265,767 (seaport).

Monetary unit: Hwan.

Languages: Korean, Chinese, Japanese.

Religions: Buddhist, Confucianist, Taoist, Christian (500,300 Christians in 1938).

HISTORY. Korea, a peninsula about 600 miles long extending out from Asia between the Yellow Sea and the Sea of Japan, was an international battleground in 1950-53, when Communist troops of North Korea invaded the U. N.-recognized Republic of Korea below the 38th parallel.

According to myth, Korea was founded in 2,333 B.C. by Tangun. His dynasty is said to have ruled until 1122 B.C. when a Chinese sage, Kija, established a dynasty supposed to have ruled until 193 B.C. Later, three kingdoms were established, one of which (Silla) absorbed the other two in 666-668 A.D. and unified the peninsula.

Upon the decay of Silla the new kingdom of Koryu was founded in 935 A.D., followed in 1392 A.D. by the Yi dynasty. In 1592 the Koreans defeated a Japanese fleet and, with Chinese help, ousted the Japanese invaders from their land. In 1627, the Manchus seized Korea and placed it again under Chinese sovereignty.

In the Chinese-Japanese War of 1894-95, Japan won predominant influence in Korea, and in 1905 reduced it to a protectorate. In 1910 Japan formally annexed Korea. A Korean bid for independence was crushed ruthlessly in 1919.

In Aug. 1945, at the end of World War II, Korea was occupied by Soviet and U. S. troops. The U. S. and the U.S.S.R. were unable to agree on the formation of an all-Korean provisional government, and in Nov. 1947 the U. N. General Assembly set up a commission, boycotted by the U.S.S.R., to arrange for elections. Elections were held in the U. S. zone on May 10, 1948, for a

national assembly, which on July 12 adopted a republican Constitution and on July 20 elected Syngman Rhee President. The new republic was proclaimed on Aug. 15 and was recognized as the legal government of Korea by the U. N. General Assembly on Dec. 12, 1948. Meanwhile, a North Korean "People's Republic" had been formed in the Soviet zone north of the 38th parallel on May 1, 1948. It claimed jurisdiction over all of Korea.

On June 25, 1950, South Korea was attacked by North Korean Communist forces. U. S. armed intervention was ordered on June 27 by Pres. Truman and on the same day the U. N. invoked military sanctions against North Korea. Gen. Douglas MacArthur was named commander of U. N. forces on July 7. U. S. and South Korean troops fought a heroic holding action, but by the first week of August, they had been forced back to a 4,000 sq. mi. beachhead in southeast Korea. There they stood off superior North Korean forces until Sept. 15, when a major U. N. amphibious attack was launched far behind the Communist lines at Inchon, port of Seoul. By Sept. 30, U. N. forces were in complete control of South Korea; they then invaded North Korea and were nearing the Manchurian and Siberian borders when several hundred thousand Chinese Communist troops entered the conflict in late October. U. N. forces then retreated successfully below the 38th parallel, where in succeeding months they repulsed several major attacks.

On May 24, 1951, U. N. forces recrossed the parallel and had made important new inroads into North Korea when truce negotiations began on July 10 at Kaesong. The truce talks, later moved to Panmunjom, continued periodically in 1952 and 1953 amid sporadic hostilities. An armistice was finally signed at Panmunjom on July 27, 1953, leaving a devastated Korea in need of large-scale rehabilitation. The armistice contemplated an international political conference on the status of Korea, but negotiations for arranging it broke down. The question was discussed without result at the Geneva conference on Far Eastern problems (April 26-June 19, 1954).

The U. S. and South Korea signed a mutual defense treaty on Oct. 1, 1953, and in Aug. 1953 the U. S. Congress authorized the use of up to \$200,000,000 for the rehabilitation and economic support of South Korea.

Syngman Rhee was re-elected President of South Korea in 1952 and 1956.

GOVERNMENT. South Korea is a republic, with legislative powers vested in a National Assembly and executive power in a popularly elected President and a Cabinet named by him.

North Korea is a typical Soviet state under the Constitution adopted on Sept. 2, 1948.

SOCIAL AND ECONOMIC CONDITIONS. In 1954, there were 2,342,065 pupils in elementary schools, 324,114 in middle schools and 160,266 in higher schools in South Korea. There is a university at Seoul. School enrollment in North Korea was claimed to be 1,942,000 in 1956.

The Korean population is more or less homogeneous and successfully withstood Japanese efforts to assimilate it. South Korea has 43 per cent of the peninsula's area and over two-thirds of its population.

Korea, predominantly agricultural, cultivates about 10,850,000 acres. Chief products are rice, barley, oats, rye, millet, soybeans, tobacco, cotton and wheat. The 1956 rice crop in South Korea was about 2,807,000 metric tons (rough).

Industrial development was speeded in the last years of Japanese rule. The leading industries by value of output ordinarily are chemical, textile, food, beverage and tobacco. Korea north of the 38th parallel has by far the larger portion of the country's industry and abundant hydroelectric resources.

Korea's prewar foreign trade was closely linked with that of Japan. South Korea's postwar trade has been financed to a large extent by U. S. funds. Imports in 1955 totaled \$82,535,400 (excluding U. S.- and U. N.-financed imports of \$244,000,000); exports were \$17,602,300. Most of the trade is with the U. S., Japan and Hong Kong. Chief imports were foods and manufactured goods; chief exports, raw materials, including tungsten, graphite and raw silk. North Korea's trade is chiefly with Communist China and the U.S.S.R.

Land communications, well developed by the Japanese for strategic reasons, included about 1,800 miles of railway in operation in 1956, and 21,000 miles of highway.

South Korea is insolvent and dependent on U. S. and other contributions. The hwan was introduced in Feb. 1953 to replace the inflated won.

NATURAL FEATURES AND RESOURCES; CLIMATE. Korea's coast, with a rugged mountain range along the east, is fringed with more than a thousand islands. Several rivers are navigable for more than a hundred miles, including the Nakdong in the south, the Han in the central region and the Yalu in the northwest, on the Manchurian border.

Korea's best mining regions are in the north. Leading products are coal, gold, silver, copper, tungsten ore, iron ore, graphite, lead, alum stone and pyrite ore.

Despite Japanese exploitation, considerable Korean forest areas remain, especially in the north.

The climate is about like that of the midwestern United States, except for a heavy rainy season in July and August. Annual rainfall is approximately forty inches.

Laos (Kingdom)

Area: 91,500 square miles.

Population (est. 1955): 1,425,000.

Density per square mile: 15.6.

Ruler: King Sisavang Vong.

Premier: Prince Savanna Phuma.

Principal cities (est. 1953): Vientiane, 20,000 (administrative capital); Luangprabang, 15,000 (royal capital).

Monetary unit: Kip.

Language: Laotian.

Religion: Buddhist.

HISTORY AND GOVERNMENT. Sparsely settled Laos occupies the northwestern portion of Indo-China. In the 14th century, a unified Lao kingdom of Lanxang was constituted on both sides of the Mékong river. It was divided in the 17th century into the two kingdoms of Vientiane, which was annexed by Siam in 1827, and Luangprabang, which recognized Siamese suzerainty shortly thereafter. In 1893 both kingdoms passed to France.

Laos was reunited in 1947 as a constitutional monarchy under the Luangprabang dynasty. In 1950 it became an associated state in the French Union. The transfer of sovereignty was completed by the Paris agreements of Dec. 29, 1954. It was admitted to the U. N. in 1955.

Under the Constitution promulgated May 15, 1947, the sovereign exercises executive power through the Cabinet headed by the Premier. Legislative power is vested in an Assembly elected by indirect universal suffrage.

SOCIAL AND ECONOMIC CONDITIONS. About half the people are Laotians who live mainly in the Mékong valley, and half are mountain tribes of Chinese and Indonesian extraction. There are sizable Chinese and Vietnamese minorities. Literacy is considerably less than 50%.

About 95% of the people are farmers. The chief food crop is rice; others are maize, vegetables, cotton, cardamons and tobacco. The leading exports are benzoin, coffee, opium and lac; cattle and teak are also exported. Laos is the least developed of the former Indo-Chinese states and has little modern industry. Tin is the only mineral of importance. The northern forests are rich in valuable timber, notably teak; the logs are floated down the Mékong. The latter, in spite of rapids, is the chief transportation route. There

are no railroads and few all-weather roads. A road-rail outlet through Thailand to the port of Bangkok is being developed. **TOPOGRAPHY AND CLIMATE.** Northern Laos is mainly a region of forested ranges and plateaus cut by narrow valleys and gorges; narrower southern Laos is a sparsely forested region of terraces. The summers (May-Oct.) are wet, with rainfall up to 80 in., succeeded by a dry season, first cool (Nov.-Feb.) and then hot (Feb.-May).

Latvia

Area: 24,600 square miles.
Population (est. 1956): 2,000,000 (1940: Lettish, 75.5% [1950: 58%]; Russian, 12%; German, 3.2%; Polish, 2.5%; others, 6.8%).
Density per square mile: 81.3.
Principal cities (est. 1956): Riga, 565,000 (capital); Liepaja, 80,000 (seaport).
Language: Latvian.
Religions (census 1930): Lutheran, 56.6%; Roman Catholic, 23.7%; Greek Orthodox, 8.9%; others, 10.8%.

Descended from ancient Aryan stock, the Latvians were early tribesmen who settled along the Baltic Sea and, lacking a central government, fell an easy prey to more powerful peoples. The German Teutonic Knights first conquered them in 1158 and ruled the area as two states—Livonia and Courland. Poland conquered the territory in 1562 and ruled until 1795 in Courland; control of Livonia was disputed between Sweden and Poland from 1562 to 1629. Sweden controlled Livonia from 1629 to 1721. Russia took over Livonia in the latter year, and Courland after the third partition of Poland in 1795. From that time until 1918, the Latvians remained Russian subjects, although they preserved their language, customs and folklore. The Russian Revolution of 1917 gave them their opportunity for freedom, and the Latvian republic was proclaimed on Nov. 18, 1918.

The republic lasted little more than 20 years. It was occupied by Russian troops in 1939 and incorporated into the U.S.S.R. in 1940. German armies occupied the nation from 1941 to 1943-44, when they were driven out by the Russians. Most countries, including the United States, have refused to recognize the Soviet annexation of Latvia.

Lebanon (Republic)

Area: 4,015 square miles.
Population (est. Dec. 31, 1954): 1,450,000 (Arabian, Armenian, Circassian, Turk).
Density per square mile: 361.1.
President: Camille Chamoun.
Premier: Sami es-Solh.
Principal cities (est. 1954): Beirut, 375,000 (capital, chief port); Tripoli, 120,000 (oil pipe-line terminus).

Monetary unit: Lebanese pound (£L).

Languages: Arabic, French.

Religions (est. 1954): Christian, 54%; Moslem, 44%; others, 2%.

HISTORY. Smaller than Connecticut, Lebanon lies at the eastern end of the Mediterranean, between Israel and Syria. In ancient times it was the mountainous hinterland of the Phoenician coast towns. From the 7th to the 11th centuries there infiltrated into southern Lebanon the heretics of Islam who finally coalesced into the Druse community.

In the 19th century the Turkish Sultanate encouraged the Druses to wage civil war against the Christian Maronites. After a massacre of 2,500 Christians in 1860, Lebanon was occupied by the French for a year. From 1864 to 1914, a Christian military government ruled the area under nominal Turkish sovereignty. After World War I, France received a League of Nations mandate over Syria and Lebanon. The French drew a Lebanese border in 1920 to offset predominantly Moslem Syria and proclaimed the area a republic under French control on May 23, 1926.

Vichy forces controlled Lebanon after the fall of France in 1940, but the Allies replaced them by July 14, 1941. Despite Syrian objections, the French permitted Lebanon to declare its complete independence on Nov. 26, 1941. Lebanon joined the Arab League and took part in the invasion of Palestine on May 15, 1948.

Bishara el-Khoury, President since 1943, resigned in Sept. 1952 and was succeeded by Camille Chamoun.

GOVERNMENT. The modern Lebanese republic is governed by a President elected by Parliament, for a six-year term, and a Cabinet of Ministers appointed by the President, but responsible to Parliament, which has 66 members. The army, numbering about 8,500, is based on a cadre of native *troupes spéciales*, formerly part of the French army in the Levant.

SOCIAL AND ECONOMIC CONDITIONS. In 1954-55, 1,775 primary schools had 155,297 pupils; 262 higher primary schools, 21,442 pupils; 92 secondary schools, 4,572 pupils. Beirut has three universities. Students totaled 3,537 in 1953.

Lebanon produces tobacco, olives, grapes and other fruits, wheat and silk. Manufacturing is confined mainly to local consumers' goods. The silk industry is important in Beirut and Tripoli; cocoon production averages about 6,000 tons annually. Tobacco manufacturing is a government monopoly. An oil refinery was opened at Tripoli in 1950. (Output 1954: 545,665 metric tons.)

The customs union with Syria was dissolved in March 1950. Recent trade data (millions of U. S. dollars):

	1954	1955	1956
Exports	28.6	33.3	40.4
Imports	174.0	218.4	237.0

Leading customers in 1956 were Saudi Arabia (13%), Syria (12%) and France (8%); leading suppliers, Syria (21%), Britain (13%) and the U. S. (12%). The leading exports were wool, fruits, vegetables, barley and cotton.

A rail line links Beirut with Damascus and Syria. Another, built in World War II by Allied engineers, runs from Tripoli to the Israeli border, and is part of a line from Cairo to Istanbul, via Haifa. One of the oil pipelines from the Kirkuk field in Iraq terminates at Tripoli; the trans-Arabian pipeline from Saudi Arabia ends at Sidon.

TOPOGRAPHY AND CLIMATE. The topography is varied. There is a narrow coastal plain, and the steep Lebanon Mountains reach heights of approximately 10,000 feet. There are no large streams. Iron ore deposits are worked in the south, and building stone and marble are plentiful. The country also has thick deposits of inferior lignite coal. Lebanon has hot dry summers (about 80° in Beirut) and cool rainy winters (50°-60° in January). At Beirut, annual rainfall is more than 35 inches.

Liberia (Republic)

Area: c. 43,000 square miles.

Population (est. 1955): 1,250,000 (native Negro, 99%; American Negro, .8%; white, .1%; others, .1%).

Density per square mile: c. 29.1.

President: William V. S. Tubman.

Principal city (census 1956): Monrovia, 41,829 (capital and chief port).

Monetary unit: U. S. dollar.

Languages: English (official), native tongues.

Religion: Protestant Christian (official); Moslem, Catholic, Pagan.

HISTORY. The history of Liberia, Africa's first republic, dates from 1822, when a small colony of freed U. S. slaves was established at Cape Mesurado, near the present site of Monrovia. On July 26, 1847, independence was proclaimed, and the first President was Joseph J. Roberts, a Virginia octoroon of considerable ability. Throughout the 19th and early 20th centuries the U. S. protected Liberia from British and French encroachments, and in 1909 Liberian finances were placed under U. S. management.

After 1920, considerable progress was made toward opening Liberia's interior, but even today only about 100,000 of its inhabitants are regarded as civilized, and lack of transportation hampers development of the heavily forested inland. In

1942, a U. S.-Liberian agreement admitted U. S. troops to build strategic airports.

In 1944 an agreement provided for permanent U. S. military and naval bases.

GOVERNMENT. The government is modeled after that of the United States. The President and Vice President are popularly elected for eight years. The 31-member House of Representatives is elected for four years and the ten-member Senate for six years. Suffrage is extended only to landowners over 21 who are of Negro blood, but a 1946 constitutional amendment provided for the seating in the House of an aborigine from each province in the hinterland. Liberia's army of about 4,000 men is organized on a militia basis.

SOCIAL AND ECONOMIC CONDITIONS. Education, compulsory in theory, is conducted in 485 schools, slightly over half state and the remainder mission and private. There are 5 state and 10 mission high schools, 1 state university and 2 mission colleges. Illiteracy is estimated at 95%.

The English-speaking descendants of U. S. Negroes, known as Americo-Liberians, are the intellectual and ruling class. The aborigines, virtually all uncivilized, are divided into some 28 tribes speaking different dialects. Some are Moslems or pagans. Christians include Anglicans, Methodists, Catholics, Baptists and Presbyterians.

Agriculture, on a crude level, is the principal means of livelihood for the tribal Liberians, who raise coffee, rice, sugar cane and cassava. Native manufacturing is nonexistent except for small industry, and the country's only big enterprise is the million-acre concession granted in 1925 to the Firestone Plantations Company for rubber cultivation. Exports in the year 1956 totaled 44,520 short tons. A large iron ore concession has been developed in the Bomi Hills area by Republic Steel Corp.; the first shipment left Monrovia in June 1951. Exports in 1956 totaled 2,037,000 long tons.

Most of the trade is with the United States. Recent statistics are as follows (in thousands of U. S. dollars):

	1954	1955	1956
Exports	26,378	42,840	44,538
Imports	22,723	25,965	26,778

Chief exports in 1956 were rubber (68%), iron ore (18%) and diamonds (5%). Leading customers were the U. S. (80%), the Netherlands (5%) and western Germany (5%); leading suppliers, the U. S. (62%), Britain (11%) and western Germany (10%).

Liberia's first railroad, a 43-mile narrow-gauge line from Monrovia to the Bomi Hills iron-ore concession, began operation in 1951. Coastwise and international air

service is supplied by Pan American Airways. Interior travel is still largely by foot with native bearers, but important progress in road construction was made during and after World War II. There are no harbors except a port and naval base completed in 1947 at Monrovia, with U. S. assistance, at a cost of more than \$19,000,000.

According to *Lloyd's Register*, on June 30, 1956, 582 vessels (100 tons and over) aggregating 5,584,378 gross tons were registered under the Liberian flag, the world's leading "flag of convenience."

TOPOGRAPHY AND CLIMATE. Liberia, about the size of Ohio, has a 350-mile frontage on the west coast of Africa, between the Ivory Coast and Sierra Leone. Its only well developed area is a low coastal strip running inland about seven miles. Beyond that is a low plateau, some of it mountainous, traversed by many rivers, of which the Cavalla (Kavalli) and the St. Paul's are the most important. The climate is tropical throughout, with rainfall up to 150 inches a year on the coast.

Libya (Kingdom)

Area: 679,358 square miles.
Population (census 1954)*: 1,091,830 (Berber, with Arab admixture, 93%; Italian, 5%; Jewish, 2%).

Density per square mile: 1.6.
Ruler: King Idris I.
Prime Minister: Abdul Majid Kobar.
Principal cities (census 1954)*: Tripoli, 130,238 (joint capital); Bengasi, 70,533 (joint capital).

Monetary unit: Libyan pound (£L).
Languages: Arabic, Italian.
Religions: Moslem (93%), Christian (5%), Jewish (2%).

* Preliminary figures.

HISTORY AND GOVERNMENT. Libya, stretching along the northern coast of Africa between Tunisia and Egypt, was a part of the Turkish dominions from the 16th century until 1911. Following the outbreak of hostilities between Italy and Turkey in the latter year, Italian troops occupied Tripoli; Italian sovereignty was recognized the next year by the Treaty of Ouchy.

Libya was the scene of much desert fighting during World War II. After the fall of Tripoli on Jan. 23, 1943, it came under Allied administration. The U. N. General Assembly voted on Nov. 21, 1949, that Libya should become independent by 1952.

Following the adoption by the constituent assembly of a Constitution, the independence of the country was proclaimed by King Idris I on Dec. 24, 1951.

Under the Constitution, Libya is a hereditary monarchy with a federal form of

government. Tripolitania, Cyrenaica and the Fezzan are the constituent provinces. It has a bicameral Parliament consisting of a Senate of 24 members, half named by the King and half by the 3 provincial legislatures, and a House of Representatives elected on a proportional representation basis according to population. The Cabinet, headed by the Prime Minister, is responsible to the federal Parliament.

The ruler, King Idris I, hereditary head of the powerful Senussi sect in Cyrenaica, was born in 1890.

SOCIAL AND ECONOMIC CONDITIONS. Tripolitania, with one-sixth the area, has 68% of the population; Cyrenaica has 27% and the Fezzan 5%. About 75% of the population is rural and about 45% of that is nomadic or seminomadic.

Animal husbandry is the basic economic activity, and there are considerable numbers of cattle, sheep, camels and goats. Agriculture is possible only in the Mediterranean coastal region, where dates, olives, citrus fruit, wheat and barley are grown, and in oases in the Fezzan and elsewhere; here the principal product is dates. Sponge and tunny fisheries are carried on off the coast.

Exports in 1956 totaled £L 3,805,000; imports, £L 16,601,000. Chief exports were peanuts (22%), scrap iron (13%) and esparto (11%). Italy was the leading customer (38%) and supplier (30%).

Railroads total 242 miles. A road extends along the coast. The principal means of communication inland are the caravans, which follow traditional routes.

TOPOGRAPHY AND CLIMATE. The area has three natural divisions from the coast inland—the Mediterranean coastland, the sub-desert, and the desert.

Winters are cool and summers warm along the coast, and hotter in the interior. Bengasi has an average temperature of 55° in January and 78° in July. Rainfall in the Tripoli area is about 15 inches a year.

Liechtenstein (Principality)

Area: 61 square miles.
Population (census 1955): 14,861 (mostly German).

Density per square mile: 243.6.
Ruler: Prince Franz Joseph II.
Chief of Government: Alexander Frick.
Principal city (census 1955): Vaduz, 3,031 (capital).

Monetary unit: Swiss franc.
Language: German.
Religion: Roman Catholic.

Tiny Liechtenstein lies on the east bank of the Rhine, just south of Lake Constance, between Austria and Switzerland. It abolished its army in 1868 and has managed to stay neutral and undamaged in all

European wars which have occurred since that date.

Founded in 1719, Liechtenstein became independent in 1866. Franz Joseph II, the reigning Prince, was born in 1906, and succeeded his great uncle, Franz I, in 1938. In 1943 he married Countess Gina Wilczek of Austria.

The Constitution of 1921 provided for a legislature, the *Landtag*, of 15 members elected by direct, universal suffrage. Liechtenstein adopted Swiss currency in 1921, and has been part of the Swiss Customs Union since 1924. Its foreign trade statistics are included in those of Switzerland, which also administers the country's telegraph and postal service.

Wheat, wine and fruit are the chief products. There are small manufactures of cotton, leather and pottery.

In 1956 there were 18 elementary and secondary schools, with total enrollment of 2,591.

Liechtenstein's area includes low valley land and upland peaks—Falkais at 8,401 feet, and Naafkopf, 8,432 feet. The chief mineral product is marble.

Lithuania

Area: 31,200 square miles.

Population (est. 1956): 2,700,000 (1940: Lithuanian, 81% [1950: 55%]; German, 4%; Polish, 3%; Russian, 2%; others, 10%).

Density per square mile: 86.5.

Principal cities (est. 1956): Vilnius (Wilno), 200,000 (capital); Kaunas, 195,000 (river port).

Language: Lithuanian.

Religions: Roman Catholic, 80%; Lutheran, 5.5%; others, 14.5%.

Southernmost of the three Baltic states, Lithuania in the middle ages was a grand duchy joined to Poland through royal marriage. Poles and Lithuanians merged forces to defeat the Teutonic Knights of Germany at Tannenberg in 1410 and extended their power far into Russian territory. In 1795, however, following the third partition of Poland, Lithuania fell into Russian hands and did not gain its independence until 1918, toward the end of World War I.

The republic was occupied by the U.S.S.R. in 1939 and annexed outright the following year. From 1940 to 1944 it was occupied by German troops and then was retaken by the Soviet Union. Western countries, including the U. S., have not recognized the Russian annexation.

Density per square mile: 312.9.

Ruler: Grand Duchess Charlotte.

Premier: Joseph Bech.

Principal city (est. 1953): Luxembourg, 66,382 (capital, iron and steel).

Monetary unit: Luxembourg franc.

Languages: Luxemburgian, French, German.

Religion: Mainly Roman Catholic.

HISTORY. Luxembourg is a small buffer state between France, Germany and Belgium. Invaded and occupied in both World Wars I and II despite the fact that its neutrality was guaranteed, Luxembourg suffered most in the latter war, when the Nazis deported several thousand natives as slave labor.

Sigefroi, Count of Ardennes, an offspring of Charlemagne, was Luxembourg's first sovereign ruler. In 1060 the country came under the rule of the House of Luxemburg. From the 15th to the 18th centuries, Spain and Austria held it in turn. The Congress of Vienna in 1815 made it a Grand Duchy and gave it to William I, King of the Netherlands. In 1839 the Treaty of London ceded the western part of Luxembourg to Belgium.

After the Nazi invasion on May 10, 1940, the government fled the country, returning in 1944 after Allied troops had liberated it. In 1948 the grand duchy joined the Western European Union, and in April 1949 it adhered to the North Atlantic Pact.

GOVERNMENT. Luxembourg is a constitutional monarchy with the Crown hereditary in the House of Nassau. The sovereign, Grand Duchess Charlotte, was born Jan. 23, 1896. The heir to the throne is Prince Jean, born Jan. 5, 1921.

The Constitution of 1868, as amended in 1919, provides for democratic government through a Chamber of Deputies of 52 members, popularly elected for five-year terms. The Constitution leaves to the sovereign the right to organize the government, which consists of a Minister of State who is President of the government (Premier) and at least 3 other ministers. There is also a Council of State of 15 members, chosen for life by the sovereign.

SOCIAL AND ECONOMIC CONDITIONS. Education is compulsory for all children between the ages of 6 and 13. The common or idiomatic language is *letzeburgesch*; German and French are also spoken. Illiteracy is practically unknown.

Although the soil is not very fertile, agriculture is prosperous. Principal crops are potatoes, oats, wheat, rye and grapes. Wine production in 1956 was 1,664,700 U. S. gal.

The mining and metallurgical industries, based on iron ore found in the south, are the most important. In 1956 an average of 28 blast furnaces produced 3,312,883 metric tons of pig iron. Production of steel ingots was 3,455,714 tons and iron and steel

Luxemburg (Grand Duchy)

Area: 999 square miles.

Population (est. Dec. 31, 1956): 312,500 (Luxemburgian, French, German).

workers averaged 20,313. Electrical energy produced in 1956 totaled 1,162,797,000 kwh. Other industries include brewing, sparkling wine, leather, textiles and cement.

By a customs union between Belgium and Luxemburg which came into force on May 1, 1922, to last for 50 years, customs frontiers between the two countries were abolished. On Jan. 1, 1948, an economic union with Belgium and the Netherlands (Benelux) came into existence. Luxemburg's foreign trade figures are included in those of Belgium and no separate statistics are available; exports consist chiefly of iron and steel products.

Transportation facilities in 1955 included 295 miles of railway and 2,670 miles of roads.

Luxemburg's prosperity depends largely on its large iron ore deposits (metal content 30%). Production (1956) was 7,593,-926 metric tons; exports, 1,844,311 tons.

Maldives Islands (Sultanate)

Area: c. 115 square miles.

Population (est. 1955): 89,000.

Density per square mile: c. 773.9.

Sultan: Amir Mohammed Farid Didi.

Prime Minister: Ibrahim Ali Didi.

Principal city (est.): Malé, 8,000 (capital).

Monetary unit: Rupee.

Languages: Sinhalese (dialect), Arabic.

Religion: Moslem.

The Maldives Islands, about 400 miles to the southwest of Ceylon in the Indian Ocean, were first visited by the Portuguese in the 16th century. They came under British protection in 1887 and were a dependency of the colony of Ceylon until 1948, when relations with Britain were formalized in a treaty which left domestic affairs in the hands of the islanders. Reactivation of a British airfield was announced Jan. 3, 1957.

For centuries a sultanate, the islands adopted a republican form of government in 1952, but the sultanate was restored in Feb. 1954. There is a bicameral legislature which is popularly elected.

The people are great traders and fishermen. Besides fishing, coir making is the chief local industry. Exports include coir, coconuts, copra, millet and fruit.

The islands consist of 12 coral atolls with about 2,000 small islands, of which about 300 are inhabited.

Mexico (Republic) (Estados Unidos Mexicanos)

Area: 760,373 square miles.

Population (est. June 30, 1956): 30,538,-000 (mestizo, 55%; Indian, 29%; white 15%; others, 1%).

Density per square mile: 40.2.

President: Adolfo Ruiz Cortines.

Principal cities (census 1950): Mexico City, 2,234,795 (capital); Guadalajara, 377,-016 (manufacturing); Monterrey, 333,422 (metallic industries); Puebla, 223,667 (cotton textiles); Mérida, 142,858 (sisal); San Luis Potosí, 125,662 (mineral smelting).

Monetary unit: Peso.

Languages (1940): Spanish, 94%; Indian, 6%.

Religion: Predominantly Roman Cath.

HISTORY. Mexico's early history is shrouded in mystery. At least two civilized races—the Mayas and later the Toltecs—preceded the wealthy Aztec empire conquered in 1519-21 by the Spanish under Hernando Cortez. Spain ruled for the next 300 years until 1810 (the date was Sept. 16 and is now celebrated as Independence Day), when the Mexicans first revolted. They continued the struggle and finally won independence in 1821 by the Treaty of Córdoba.

Turbulent years followed. From 1821 to the first presidency of Porfirio Díaz in 1877, there were two Emperors, several dictators and enough Presidents and provisional executives to make a new government on the average of every nine months. Mexico lost Texas (1836), and after defeat in the war with the United States (1846-48) it lost the area comprising the present states of California, Nevada and Utah, most of Arizona and New Mexico, and parts of Wyoming and Colorado.

In 1855 the Indian patriot Benito Juárez began a series of liberal reforms including the disestablishment of the Catholic Church, which had acquired vast property. A subsequent civil war was interrupted by the French invasion of Mexico (1861), the crowning of Maximilian of Austria as Emperor (1864), and then his overthrow and execution by forces under Juárez, who again became President in 1867.

During the rule of the dictator Porfirio Díaz (1877-80 and 1884-1911) the country was freed from political strife, made substantial economic progress, and gained a respected position in foreign affairs. But Díaz' reactionary land policy led to revolution and his resignation in 1911. The next few years were marked by bloody political-military strife, and trouble with the United States culminating in the punitive expedition into northern Mexico (1916-17) in unsuccessful pursuit of the bandit-politician Pancho Villa.

Lázaro Cárdenas (1934-40), backed by the National Revolutionary party (PRI), began a socialistic program of land distribution to peasants, government seizure of foreign-owned oil lands, and broad labor reforms. General Manuel Avila Camacho, President during World War II, cooperated closely with the United Nations and followed Cárdenas' policy at home.

In July 1946, Miguel Alemán was elected President, backed by the Avila Camacho administration and the PRI. Alemán continued the internal policy initiated by Cárdenas; his administration was marked by continued cordial relations with the United States. Adolfo Ruiz Cortines, the administration candidate, was elected to succeed him in quiet elections held in July 1952; he took office Dec. 1.

GOVERNMENT AND DEFENSE. The President, popularly elected for six years and ineligible to succeed himself, governs with a Cabinet of ministers. The Federal Congress has two houses—the 162-member Chamber of Deputies, elected for three years (one for each 150,000 population) and the 60-member Senate, elected for six years. All married male citizens at least 18, and all single male citizens at least 21 are eligible to vote. Women received the right to vote in 1953.

Each of the 29 states has considerable autonomy, with a popularly-elected Governor, legislature and local judiciary. The President appoints the Governors of the two Federal territories, and the governing body of the Federal District.

Military service is compulsory, and the President holds supreme command of the armed forces, through the Secretary of War. The national army, greatly modernized during World War II, numbered about 55,000 men in 1951; the air force had 270 planes and two U. S.-trained squadrons. In Dec. 1956, the navy had 8 frigates and escort vessels and a number of other smaller craft.

SOCIAL AND ECONOMIC CONDITIONS. *Education.* Illiteracy is one of Mexico's big problems, and the government is trying hard to reduce the rate, estimated at 38 per cent in 1950, as against 60 per cent in 1930. Education is free, compulsory from 6 to 16, separated from the church, and under Federal control. There were 26,614 primary schools in 1953 with an enrollment of 3,117,012 and 573 secondary schools with 34,367 students. There are 14 universities, including the University of Mexico at Mexico City.

Agriculture. Primitive agricultural methods are steadily giving way to modern practices. More than 17,000,000 acres are under cultivation. About 2,500,000 acres are irrigated, but the eventual total of watered land is expected to be 5,500,000 acres. The Yucatán peninsula, at the southern end of the Gulf of Mexico, raises more than half of the world supply of sisal hemp (121,000 metric tons in 1955).

Production estimates for principal crops in 1955-56 were as follows, in metric tons: wheat, 820,000; maize, 3,200,000; rice, 190,000; coffee, 1,400,000 bags of 132 lb. each; cotton, 466,000; cottonseed, 730,000. Sugar production in 1955-56 totaled about 917,000 tons.

Stockraising is important on non-arable land. Mexico's inventory of livestock in 1956 included an estimated 16,000,000 cattle, 5,300,000 sheep and 7,900,000 hogs.

Industry. The leading industrial products are cotton cloth and thread, beer, sugar, iron and steel. Other products are flour, soap, cigars and cigarettes, rubber manufactures, vegetable oils, paper, wool, silk and rayon yarn and cloth, cement, shoes and glass. In 1955, 327,600 metric tons of pig iron and 525,600 tons of steel were produced.

Trade. Foreign trade data, in millions of pesos, are as follows:

	1954	1955	1956
Exports	6,140	8,350	8,595
Imports	8,926	11,065	13,401

Chief exports in 1956 were cotton (28%), coffee (12%), copper (8%), lead (7%) and zinc (5%). The U. S. took 73% of the exports and supplied 78% of the imports. Other leading customers were Japan, Britain and western Germany. Leading imports included machinery, vehicles and iron and steel products.

Communications. Railway mileage (1955) was 14,674. Total highway mileage (1955) was 35,566, of which 20,990 mi. were surfaced. The merchant fleet had 64 vessels (100 tons and over) aggregating 164,759 gross tons on June 30, 1956 (*Lloyd's Register*). Veracruz and Tampico, on the Gulf of Mexico, are the country's most important ports.

Finance. Recent government financial data are as follows (in millions of pesos):

	1955*	1956*	1957*
Revenue	5,700	6,700	7,578
Expenditure	5,700	6,700	7,578

* Budget estimate.

NATURAL FEATURES AND RESOURCES; CLIMATE. Mexico is a great, high plateau, open to the north, with mountain chains on east and west and with ocean-front lowlands lying outside of them. It has two big spears—the peninsula of Lower California which is mountainous, and the Yucatán peninsula, which is mostly a low plain. The eastern mountains are marked by high volcanoes.

Minerals. Mexico is one of the richest mineral countries in the world. It outranks all other countries in silver production (1956: 43,077,046 fine oz.). Other minerals, with 1956 production, are gold, 350,242 oz.; lead, 216,822 short tons; copper, 66,276 tons; zinc, 274,348 tons; antimony, 5,022 tons; tin, 529 tons; (1955) coal, 1,342,262 metric tons; iron ore, 107,565 tons. A considerable variety of other industrial minerals is produced. Deposits of uranium are reported to exist.

Most of the Mexican mining properties are foreign-owned, and the industry is declining in relative importance. The oil-

fields, lying along the east coast, were seized by the government in 1938, but later the foreign owners were indemnified. Production in 1956 was 91,000,000 barrels.

Forests. Mexico's forests are of considerable importance; they include pine, oak, fir, mahogany, red and white cedar and primavera. Resins, turpentine and vegetable wax are also produced. Yucatán produces nearly all of the world's chicle, the juice of the sapodilla tree, used as the base of chewing gum.

Climate. Partly in the torrid and partly in the north temperate zone, Mexico has three distinct climate regions. From the coasts inland to the plateau it is tropical, with temperatures sometimes topping 100°, but averaging from 77° to 82°. The plateau is sub-tropical with an average of 75°, and the mountains, over 6,000 feet, average 60°. On the east coast the annual rainfall sometimes reaches 100 inches, while in Lower California rain hardly ever falls. Rainfall on the plateau is 20 to 40 inches a year, comparable to that of the west central United States. In Mexico City the coldest months are December and January (about 55°); the warmest, April and May (65°). The wet season extends from April to September.

Monaco (Principality)

Area: .59 square mile (375 acres).

Population (census 1956): 20,422.

Density per square mile: 34,613.6.

Ruler: Prince Rainier III.

Principal and only cities (census 1951): Monaco, 1,860; La Condamine, 9,858; Monte Carlo, 8,484.

Monetary unit: French franc.

Language: French.

Religion: Roman Catholic.

A tiny, hilly wedge driven into the French Mediterranean coast nine miles east of Nice, Monaco is a little land of pleasure with a tourist business that runs as high as 1,500,000 visitors a year. Monaco had popular gaming tables as early as 1856. Five years later, a 50-year concession to operate the games was granted to François Blanc, of Bad Homburg. This concession passed into the hands of a private company in 1898.

The Phoenicians, and after them the Greeks, had a temple on the Monacan headland honoring Hercules. From *Monoi-kos*, the Greek surname for this mythological strong man, the principality took its name. After being independent for 800 years, Monaco was annexed to France in 1793 by the French Revolutionists, and was placed under Sardinia's protection in 1815. In 1861, it went under French guardianship but continued to be an independent country.

Prince Albert of Monaco gave the principality a Constitution in 1911, creating a

National Council of 18 members popularly elected for four years. The government is under a ministry, acting on the Prince's authority. The ruler, Prince Rainier III, born May 31, 1923, succeeded his grandfather, Louis II, on the latter's death, May 9, 1949. Rainier was married April 19, 1956, to Grace Kelly, U. S. actress. A daughter, Princess Caroline Louise Marguerite, was born Jan. 23, 1957.

Mongolian People's Republic (Outer Mongolia) (Republic)

Area: 614,350 square miles.

Population (est. 1956): 1,000,000 (Mongol, except for about 100,000 Russians and 50,000 Chinese).

Density per square mile: 1.6.

Chairman of Presidium: Zh. Sambu.

Prime Minister: Y. Tse Den-bal.

Principal city (est. 1954): Ulan Bator, 100,000 (capital).

Monetary unit: Tugherik.

Languages: Mongolian, Russian.

Religion: Lama-Buddhist.

HISTORY AND GOVERNMENT. The Mongolian People's Republic, known also as Outer Mongolia, is a Russian satellite that measures more than twice the area of Texas. It contains the original homeland of the historic Mongols, whose power reached its zenith during the 13th century under Kublai Khan. The area accepted Manchu rule in 1689, but after the Chinese Revolution of 1911 and the fall of the Manchus in 1912, the northern Mongol princes expelled the Chinese officials and declared independence under the Khutukhtu or "Living Buddha." In 1921, Soviet troops entered the country and facilitated the establishment of a republic by Mongolian revolutionaries in 1924 after the death of the last Living Buddha. China, meanwhile, continued to claim Outer Mongolia but was unable to back the claim with any strength. Under the Chinese-Russian Treaty of 1945, China agreed to give up Outer Mongolia, which, after a rigged plebiscite, became nominally independent.

The government of the republic is strikingly similar to the Soviet system. The Great Hural or Huruldan (parliament) is elected by universal suffrage, meets at least once in three years and picks 30 members to act as an executive committee—the Little Hural—which in turn selects a presidium of seven members as an interim body. A Cabinet of ten ministers appointed by the Little Hural governs the country.

SOCIAL AND ECONOMIC CONDITIONS. A number of young Mongols are regularly sent to the U.S.S.R. for technical training. In 1953, there were said to be 432 primary

and secondary schools, 16 technical schools and several higher-education institutions.

The country is largely pastoral. There are few areas suitable for crop growing, but some millet, rye and wheat are produced. Most of the people are essentially nomadic or seminomadic; flocks and herds remain the chief source of wealth.

There are a few industrial enterprises. All land, natural resources, factories, mines, hay-making stations and public utilities are nationalized.

Foreign trade, a state monopoly, is carried on mainly with the Soviet Union, but also with Communist China. The leading exports are livestock, wool, hides, animal hair, meat and furs.

NATURAL FEATURES AND RESOURCES; CLIMATE. The productive regions of Outer Mongolia—a tableland ranging from 3,000 to 5,000 feet in elevation—are in the north, which is well drained by numerous rivers, including the Kerulen, Tola, Orkhon and Selenga.

Reserves of 500,000,000 tons of coal are said to exist in the Nalaikha field near Ulan Bator. Some gold is mined. Deposits of antimony, copper, iron ore, lead, graphite, mercury, sulfur and silver exist.

The climate is continental, with hot summers and cold winters. Mean temperature at Ulan Bator is 15° in January and 64° in July. Rainfall is light throughout the country, and is almost negligible in the Gobi Desert in the southeast.

Morocco (Kingdom)

(Maroc)

Area: 174,553 square miles.

Population (est.): 9,700,000.

Density per square mile: 55.6.

Ruler: King Mohammed V.

Prime Minister: Si M'Barak Ben Bekkal.

Principal cities (census 1951-52): Casablanca, 682,388 (chief seaport); Marrakesh, 215,312 (trading center); Fez, 179,372 (commercial center); Rabat, 156,209 (French administrative center); Tetuán (census 1950), 80,732 (Spanish administrative center).

Monetary units: French franc, Spanish peseta.

Languages: Arabic, French, Spanish.

Religions: Chiefly Moslem.

HISTORY. Morocco, about the size of California, is just south of Spain across the Strait of Gibraltar and looks out on the Atlantic from the northwest shoulder of Africa. It was once the home of the Berbers, who helped the Arabs invade Spain in A.D. 711 and then revolted against them and gradually won control of large areas of Spain for a time after 739.

The country was ruled successively by various native dynasties and maintained regular commercial relations with Europe, even during the 17th and 18th centuries when it was the headquarters of the

famous Salli pirates. In the 19th century, clashes with the French and Spanish became frequent. Finally, in 1904, France and Spain divided Morocco into zones of French and Spanish influence, and these were established as formal protectorates in 1912.

Meanwhile, Morocco had become the object of big-power rivalry, which almost led to a European war in 1905 when Germany attempted to gain a foothold in the rich mineral country. By terms of the Algeiras Conference (1906), Morocco was internationalized economically and France's privileges were limited. War again seemed imminent in 1911, when Germany dispatched a warship to Agadir in an evident attempt to intimidate France. Again the dispute was settled, however, and this time Germany recognized France's right to establish a protectorate over Morocco.

The Tangier Statute, concluded by Britain, France and Spain in 1923, created an international zone at the port of Tangier, permanently neutralized and demilitarized. In World War II, Spain occupied the zone, ostensibly to insure order, but was forced to withdraw in 1945, and the international rule was re-established.

Sultan Mohammed V was deposed by the French in Aug. 1953 and replaced by his uncle, but nationalist agitation forced his return in Nov. 1955.

France recognized the independence and sovereignty of Morocco on March 2, 1956. Spain followed on April 7, 1956. The Tangier international zone was abolished by a declaration signed Oct. 29, 1956. Morocco was admitted to the U. N. Nov. 12, 1956.

GOVERNMENT. Pending the adoption of a Constitution, Morocco is an absolute monarchy under the King. He is advised by a Cabinet of Moroccan ministers headed by the Prime Minister.

During a transitional period, the status of the French and Spanish armed forces remains unchanged, but a national army is in the process of formation.

SOCIAL AND ECONOMIC CONDITIONS. Most of the natives are illiterate; some get rudimentary education in Koranic schools or state-maintained institutions. Education is provided for Europeans.

The natives are Berbers, roughly divided by customs and way of life into three groups—the Rif group along the coast, the central or Berber group in the mid-Atlas Mountains, and the southern or Chleuh in the high Atlas and the Sus. There is a large Jewish population. Most of the Europeans live in the cities.

Morocco is essentially agricultural. In the former French zone, about 19,600,000 acres are arable, with 1956 production of wheat 1,066,000 metric tons; of barley, 1,650,000 tons. Corn, beans, peas, hemp,

sorghum, citrus fruits and dates also are raised. Production of olive oil in 1956 was 30,000 tons. In 1955 there were 15,400,000 sheep and 2,466,000 cattle.

In the former Spanish zone, agriculture is largely undeveloped, but it has potential importance. Barley, wheat, maize and sorghum crops are the most important.

Manufacturing industries introduced by Europeans, mostly small, produce chemicals, flour, leather, stone, beverages and textiles. Native industries include carpet weaving and making Turkish slippers.

Exports from the French zone in 1956 totaled 118,829,000,000 fr.; imports, 155,559,000,000 fr. Chief exports were phosphate (20%), barley (7%), olive oil (7%) and citrus fruit (6%). France took 53% of the exports and supplied 48% of the imports, which included sugar, vehicles, petroleum products, cotton cloth and tea. Exports from the Spanish zone in 1951 totaled 300,500,000 pesetas and imports 808,400,000 pesetas. A large proportion of the trade was carried on with Spain. Major exports are iron ore, fish and grain; imports include flour, sugar, tea, wine and textiles. Tangier's exports in 1955 were 2,760,652,000 fr.; imports, 11,672,894,000 fr.

Railroads in 1951 totaled 984 miles in the French zone and 57 miles (standard gauge) in the Spanish zone. Highway mileage in 1953 was approximately 6,300 in the French zone, approximately 540 in the Spanish zone and 65 in Tangier. Casablanca, which handles 80 per cent of the French zone trade, has perhaps the world's largest artificial port.

Exploitation of French Morocco's almost inexhaustible deposits of phosphate is a state monopoly and produced a total of 5,328,000 metric tons in 1955. Other major minerals are coal, cobalt, iron ore, manganese ore, molybdenum, tin, zinc and lead. Iron ore (1955: 1,040,000 metric tons) is the chief mineral of the Spanish zone; others are antimony and manganese.

NATURAL FEATURES; CLIMATE. On the Atlantic coast there is a fertile plain; the Mediterranean coast is mountainous, making most of the Spanish zone a rugged area. The Atlas Mountains, running north-eastward from the south to the Algerian frontier, average 11,000 feet in elevation.

Morocco's climate is essentially Mediterranean, modified by the Atlantic. On the Atlantic coast the temperatures are relatively cool (at Mogador, 61.5° in January and 72.3° in August). Inland the climate is more continental, with colder winters and hotter summers (at Fez, 50° in January, 80.6° in August). Rainy seasons are in October-November and April-May (38 inches annually at Tangier, 22 at Rabat, 17 at Casablanca, 11 at Mogador).

Nepal (Kingdom)

Area: 54,510 square miles.

Population (census 1954): 8,431,537 (Gurkha [predominant], Magar, Gurung, Bhotia [Tibetan], Newar).

Density per square mile: 154.7.

Ruler: Mahendra Bir Bikram.

Prime Minister: Kunwar Inderjit Singh.

Principal city and capital: Katmandu (estimated population, 108,800).

Monetary unit: Nepalese rupee.

Languages: Parbatia, Gubhajib, Tibetan.

Religions: Hinduist, Buddhist.

HISTORY. A landlocked country about the size of Iowa, lying between the Republic of India and Tibet, Nepal has two great distinctions. It contains Mt. Everest, 29,028 feet high, the tallest measured mountain in the world. And it produces some of the toughest fighting men in the world—the Gurkhas.

Led by Rajah Prithwi Narayana, the Gurkhas invaded Nepal from India in 1768 and conquered it. A commercial treaty was signed with Britain in 1792, and in 1816, after more than a year's hostilities, the Nepalese agreed to allow British residents to live in Katmandu, the capital. In 1923 Britain recognized the absolute independence of Nepal. The United States and Nepal signed a treaty of friendship and trade on April 25, 1947. King Tribhubana was deposed on Nov. 7, 1950, but was returned to the throne with Indian assistance on Feb. 15, 1951. On his death Mar. 13, 1955, his son Mahendra became ruler. Nepal was admitted to the U. N. in 1955.

Nepalese troops assisted the British during the Indian Mutiny, the Tibet War of 1904, World War I, the Afghan hostilities of 1919, and World War II.

GOVERNMENT. Until 1951, real power was vested in the Prime Minister, nominated by special rules from among the royal family. The King now appoints the Prime Minister and Cabinet members, who are responsible to him. The first commoner Prime Minister, M. P. Koirala, took office in Nov. 1951.

The predominant Gurkhas are essentially a military caste. The army numbers about 20,000 regulars and 25,000 reserves. More than 100,000 Gurkha volunteers fought with the Indian Army in the Burma campaign of World War II.

ECONOMIC CONDITIONS. Cultivated and irrigated where possible, the main valley of Nepal grows rice, wheat, pulse, fruits, vegetables, spices, sugar cane and potatoes. A few sheep and cattle are grazed. Manufacturing is limited to native handicraft, but jute and textile mills are being established. Trade with India and Pakistan passes through frontier stations; there are two mountain trade routes to Tibet.

Main exports include hides, skins, opium, gums, resins, dyes, jute, wheat, pulse, rice, spices and timber. Two railroads enter Nepal for short distances—one from Raxaul, India, to Amlekhganj, the other from Jayauagar to Bijulpura. Transportation is for the most part difficult; there were only about 350 mi. of roads in 1955.

NATURAL FEATURES AND RESOURCES; CLIMATE. Along its southern border, Nepal has a strip of level land which is partly forested, partly cultivated. North of that is the slope of the Himalayan Range, including Mt. Everest (29,028 ft.), which was climbed for the first time in 1953, and many peaks higher than 20,000 feet. Mineral resources, nearly all unexploited, include lignite, copper, zinc, lead, sulfur, marble and iron. Southern Nepal has valuable forests which yield gum, timber, resin and dye. Hemp plants grow wild. Mean temperature is 60°, with the hot season from April to June. Most of the rainfall occurs from June to October.

Netherlands (Kingdom) (Koninkrijk der Nederlanden)

Area: 12,482 square miles.*
Population (est. Jan. 1, 1957): 10,957,040
(practically all Dutch).

Density per square mile: 877.8.

Sovereign: Queen Juliana.

Prime Minister: Willem Drees.

Principal cities (est. 1957): Amsterdam, 871,188 (capital, financial center); Rotterdam, 722,718 (chief port); The Hague, 606,728 (seat of government); Utrecht, 247,816 (railway center); Haarlem, 167,264 (tulip center); Eindhoven, 157,621 (industrial center).

Monetary unit: Guilder.

Language: Dutch.

Religions (census 1947): Roman Catholic, 38.5%; Dutch Reformed, 31.0%; other Protestant, 13.3%; Jewish, 0.2%; others and no creed, 17.0%.

* Excluding waterways and bodies of water larger than 185 acres.

HISTORY. Julius Caesar found the low-lying Netherlands inhabited by Germanic tribes, the Nervii, Frisii and Batavi. The Batavi on the Roman frontier did not submit to Rome's rule until 13 B.C., and then only as allies. A part of Charlemagne's empire in the 8th century A.D., the area later passed into the hands of Burgundy and the Austrian Hapsburgs and finally in the 16th century came under Spanish rule. When Philip II of Spain suppressed political liberties and the growing Protestant movement in the Netherlands, a revolt led by William of Orange broke out in 1568. Under the Union of Utrecht in 1579, the seven northern provinces became the Republic of the United Netherlands.

The Dutch East India Company had been established in 1602, and by the end of the 17th century Holland was one of

the great sea and colonial powers of Europe.

Following Napoleon's defeat, the United Netherlands and Belgium became the "Kingdom of the United Netherlands" under William I, son of William V and head of the House of Orange. The Belgians withdrew from the union in 1830, forming their own kingdom. William I abdicated in favor of William II in 1840; the latter was largely responsible for the promulgation of a liberal Constitution in 1848.

The Netherlands continued to prosper during the long reign of William III from 1849 to 1890. The male line of the House of Nassau became extinct with his death in 1890 and he was succeeded by his 10-year-old daughter, Wilhelmina, who was crowned Queen in 1898.

Neutrality was maintained during World War I, but overseas trade suffered heavily from the Allied blockade and German submarine warfare. At the outbreak of World War II neutrality was again proclaimed, but German troops invaded the country May 10, 1940, and by May 15, Dutch forces were ordered to lay down their arms. Queen Wilhelmina and Crown Princess Juliana fled to London, where a government-in-exile was established under Prime Minister P. S. Gerbrandy.

The German army in the Netherlands capitulated May 5, 1945, and on May 23, the Dutch government met once more in The Hague. Queen Wilhelmina abdicated after her fiftieth anniversary as ruler on Sept. 6, 1948, and was succeeded by Juliana, her only daughter.

The Labour party gained a plurality in elections held in 1952 and 1956, and Willem Drees continued as Prime Minister at the head of coalition governments.

RULER. Queen Juliana, who was born April 30, 1909, was married on Jan. 7, 1937 to Prince Bernhard of Lippe-Biesterfeld (born in 1911). They have four daughters: Beatrix, heiress apparent (born Jan. 31, 1938); Irene (born 1939); Margriet Francisca (born 1943), and Maria Christina (born 1947).

GOVERNMENT AND DEFENSE. The Netherlands is a constitutional and hereditary monarchy, with female succession taking place only in default of male heirs.

Executive power is vested exclusively in the sovereign, while legislative power rests with the sovereign and the States-General (Parliament). The upper chamber of Parliament, with 75 members, is elected for 6 years by the provincial states. The lower chamber, which shares with the government the privilege of initiating new bills and proposing amendments, consists of 150 deputies who are elected directly for four years and retire *en bloc*. Executive power is exercised in part by responsible ministers, headed by the Prime Minister

and holding office at the pleasure of the sovereign. Suffrage is universal for all Dutch subjects of 23 years of age. The party standing in the lower chamber (elections of June 1956, after adjustments required by constitutional amendments increasing membership) was as follows: Labour 50, Catholic 49, Anti-Revolutionary 15, Freedom and Democracy 13, Christian Historical Union 13, Communist 7, Political Reform 3.

Each of the eleven provinces has a local representative body—a Provincial State—presided over by a Royal Commissioner. Each of the 1,014 communes has a locally elected Council and a Mayor appointed by the Crown.

Defense. Military service is compulsory. The army had three divisions in 1955, and the air force 300 planes. In Dec. 1956 the navy had 1 fleet carrier, 2 light cruisers, 12 destroyers, 6 submarines, 24 frigates and escort vessels.

SOCIAL AND ECONOMIC CONDITIONS.

Education. Education is compulsory from the ages of 7 to 13; illiteracy is almost unknown. In 1954-55, elementary schools numbering 7,597 (of which 5,101 were private) had a total enrollment of 1,451,289; 1,359 secondary schools had 256,267 pupils. The 6 universities and 4 *hogescholen* (vocational colleges) had 27,555 students in 1953-54. The 4 public universities are at Leyden, Utrecht, Groningen and Amsterdam; the 2 private universities are the Calvinist University of Amsterdam and the Roman Catholic University of Nijmegen.

Agriculture. Dutch farms are characteristically small, with only a few larger than 250 acres. Dairying is more important than crop growing; production of cheese, milk, butter and eggs is under state control. Recent production data are as follows (thousands of metric tons):

	1954	1955	1956*
Wheat	397	350	309
Barley	207	264	273
Rye	512	465	492
Oats	465	582	483
Potatoes	4,148	4,082	3,531
Beet sugar	415	416	365
Butter	82	74	77
Cheese	164	156	153
Milk	5,863	5,705	5,322

* Provisional.

In 1956 there were 2,962,000 cattle, 2,332,000 hogs, 433,000 sheep and 210,000 horses. Large quantities of vegetables and fruits are raised for export.

Almost as important as the dairy industry is the raising of tulip, hyacinth and other flower bulbs in the area around Haarlem. Net value of agricultural and horticultural production in 1954-55 was 5,323,000,000 guilders.

Industry. The Netherlands is a highly industrialized nation, utilizing both overseas raw materials and domestic agricultural products. In 1956 there were about 10,970 larger industrial enterprises employing 1,004,500 workers with gross production valued at 26,700,000,000 guilders. Leading industries are textiles, clothing, shipbuilding, shoes, food, and building materials.

The Netherlands ranks high among the world's shipbuilding nations; 184 vessels of 600,642 gross tons were under construction on March 31, 1957. Production of pig iron in 1956 was 662,000 metric tons; of steel, 1,050,000 tons. Amsterdam is one of the world's diamond-cutting centers.

Trade. Trade statistics, in millions of guilders (excluding parcel post, specie and diamonds) are as follows:

	1954	1955	1956
Exports	9,058.9	10,211.0	10,874.6
Imports	10,688.1	12,188.9	14,105.2

Principal customers in 1956 were western Germany (18%), Belgium (14%), Britain (12%), the U. S. (6%) and France (5%). Leading suppliers were Belgium (19%), western Germany (18%), the U. S. (14%), Britain (8%) and France (3%). The chief exports were petroleum and coal-tar products (10%), dairy products and eggs (10%), electrical machinery and apparatus (6%) and fabrics and clothing (6%). Leading imports were machinery, iron and steel and manufactures, petroleum and products, cereals and flour and wood and manufactures.

Communications. The Dutch merchant marine had 1,797 seagoing vessels (100 tons and over) of 4,006,077 gross tons on June 30, 1956—the seventh largest fleet in the world. An extensive network of rivers expanded by many canals has led to extensive development of inland shipping. The length of navigable canals and rivers is almost 5,000 miles. River ships and barges numbered 15,380 on Jan. 1, 1957, with a total deadweight tonnage of 4,300,000. In 1956, 125,700,000 metric tons of freight were carried on rivers and canals. The wealth of water transport has obviated the need for wide railway development. In 1955, there were 2,850 miles of railway, all operated by a government-owned company, and, in 1954, 2,570 miles of primary highways.

The Royal Dutch Airlines (KLM), flew 39,371,000 miles on 106 routes in 1956 and carried 822,000 passengers.

Finance. Recent financial data are as follows (in millions of guilders):

	1954*	1955†	1956‡
Revenue	6,860	6,656	6,117
Expenditure	6,928	7,769	6,697

* Provisional. † Revised budget estimate. ‡ Preliminary budget estimate.

The national debt on Dec. 31, 1955, including debt to the Netherlands Bank and war damage obligations, totaled 19,689,000,000 guilders.

NATURAL FEATURES AND RESOURCES; CLIMATE. Part of the great plain of north and west Europe, the Netherlands has maximum dimensions of 190 by 160 miles and is low and flat except in Limburg in the southeast, where some hills rise to 300 feet. About half the country's area is below sea level, making the famous Dutch dikes a requisite to use of much land. Reclamation of land from the sea through dike-building has continued through recent times.

All drainage reaches the North Sea, and the principal rivers—Rhine, Maas (Meuse) and Schelde—have their sources outside the country. The Rhine is the most heavily used waterway in Europe.

Netherlands minerals are few. The only important ones are coal (11,836,000 metric tons in 1956), crude petroleum (7,678,000 barrels), lignite (270,000 tons) and salt. There also are peat swamps and about 600,000 acres of forest. The Netherlands fishing fleet made a catch of 263,700 metric tons valued at 102,200,000 guilders in 1956. Herring (115,900 tons) was the most important item.

Marsh mists, dense sea fogs and a humidity exceeding 80 per cent mark the Netherlands climate. Winters are colder than in eastern England at the same latitude. Utrecht, roughly central in location, has a January average temperature of 34.2° and a July average of 62.6°. Average rainfall for the country is about 28 inches. July–Sept. is the wettest period.

NETHERLANDS OVERSEAS TERRITORIES

NETHERLANDS ANTILLES—Status: Part of the United Kingdom of the Netherlands.

Area: 366 square miles.
Population (est. Dec. 31, 1955): 187,473.
Capital: Willemstad (est. 1953: 44,062).
Governor: F. E. J. van der Valk (acting).
Prime Minister: Ephraim Jonckheer.
Foreign trade (1956), exports, 1,585,000,000 florins; imports, 1,656,000,000 florins. Chief export: petroleum products (more than 95 per cent).

Agricultural products: aloes, beans, corn. Manufactures: refined petroleum, straw hats.

Mineral products: lime phosphate, salt.

This comprises two groups of Caribbean islands 500 miles apart; one, about 40 miles off the Venezuelan coast, consists of Curaçao (173 sq. mi.), Bonaire (95 sq. mi.) and Aruba (69 sq. mi.); the other, lying to the northeast, consists of 3 small islands with a total area of 29 square miles. The Dutch acquired the island of Curaçao from Spain in 1634 and have held it since, except for short intervals during the Napoleonic Wars.

The Governor is assisted by a local Legislature and Cabinet. The area has complete autonomy in domestic affairs.

The economy of the Netherlands Antilles is based almost entirely on the refining at Curaçao and Aruba of crude petroleum, which comes chiefly from the adjacent Maracaibo fields in Venezuela.

Dutch is the official language, but many inhabitants speak a patois known as Papiamentu, a mixture of Spanish, Dutch, English, Portuguese, native and other words.

The island of Curaçao has a torrid climate, with average temperatures of 79° in January and 83° in September. Rainfall is light, averaging only 16 inches annually. It occurs mostly in the October–January period.

SURINAM (Dutch Guiana)—Status: Part of the United Kingdom of the Netherlands.

Area: 55,143 square miles.
Population (est. 1956): 240,000.*
Capital: Paramaribo (pop. 1956: 95,000).
Governor: J. van Tilburg.

Prime Minister: J. H. E. Ferrier.
Foreign trade (1955): exports, 49,684,000 florins (70% to the U. S.); imports, 51,610,000 florins (33% from the U. S.). Chief export: bauxite (over 80%).

Agricultural products: rice (1955: 64,526 metric tons), sugar, coffee.

Minerals (1955): bauxite, 3,060,000 metric tons; gold, 7,235 troy oz.

Forest products: balata (1955: 183 metric tons), timber.

* Including aborigines, numbering about 26,000.

Surinam lies in northeastern South America between British and French Guiana. It was received by the Dutch from England at the Peace of Breda (1667) in exchange for New York and at that time included British Guiana, which was seized by England in 1803 and formally ceded to her at the conclusion of the Napoleonic Wars.

The Governor of Surinam (appointed by the Crown) is assisted by a local Legislature and Cabinet, which have sole responsibility in domestic affairs.

Mining is the most important activity, and only about 65,000 acres are devoted to agriculture. The largest bauxite mines are owned by Aluminum Company of America subsidiaries. In 1946 a company was formed to work 10,000,000 acres of the area's vast, but almost inaccessible, hardwood forests.

In 1950 the heterogeneous population included 2,850 Chinese, 22,000 Djukas (descendants of escaped slaves), 3,700 aboriginal Indians, 82,410 Negroes and mulattoes, as well as 95,000 Indian and East Indian laborers and their descendants, brought in after the abolition of slavery in 1863 to work the sugar plantations. The Dutch numbered fewer than 5,000.

From its settled coastal plain, Surinam runs back to a virtually unexplored mountain and jungle area along the Brazilian border. Rivers are the chief means of interior travel. The climate is tropical throughout but is modified by the northeast trade winds. Yearly range of temperature is approximately 70.5°-90°.

NETHERLANDS NEW GUINEA—Status: Part of the United Kingdom of the Netherlands.

Area: 160,618 square miles.
Population (est. 1955): 700,000.
Capital: Hollandia (pop. 1954: 11,322).
Governor: Jan van Baal.
Agricultural products: sago, coconuts, sugar cane, sweet potatoes.
Minerals: petroleum (1956: 2,618,430 barrels), nickel, chrome.

The western part of New Guinea, second largest island of the world, with smaller adjacent islands, forms part of the kingdom of the Netherlands. The area remained Dutch upon the transfer of sovereignty in Indonesia in Dec. 1949, with the understanding that its status would be determined within one year by negotiation between the Netherlands and Indonesia. Subsequent negotiations did not lead to any agreement.

Dutch influence dates back to the activities of the Dutch East India Company in the 17th century. In 1828, the Dutch government declared Northwest New Guinea part of the Dutch East Indian colonies, and the area was administered as part of the Netherlands Indies until 1949.

The Papuans are the dominant stock; there are also Melanesian and Negrito elements. There were approximately 10,000 Europeans and 13,000 Asiatics (chiefly Indonesians) in 1955. Production of petroleum began in 1948 at oilfields in the Vogelkop region (Berau Penin) on the western tip of the island. Except for this, commerce and industry are almost unknown and life is primitive, with head-hunting and cannibalism not unknown even today.

Nicaragua (Republic)

(República de Nicaragua)

Area: 57,143 square miles.*
Population (est. 1956): 1,282,000 (1943: mestizo, 69%; white, 17%; Negro, 9%; Indian, 5%).

Density per square mile (land only): 22.4.

President: Luis Somoza Debayle.

Principal cities (census 1950†): Managua, 109,352 (capital); León, 30,544 (trading center); Granada, 21,035 (trading center); Chinandega, 13,146 (sugar).

Monetary unit: Córdoba.

Language: Spanish.

Religion: Roman Catholic.

* Including inland water area of 3,475 square miles.

† Urban population of municipios.

HISTORY. Nicaragua was first visited by the Spaniards in 1522. The chief of the country's leading Indian tribe at that time was called Nicaragua, from whom the nation derived its name. The country was part of Spanish Guatemala until the general Central American revolution in 1821. Upon the dissolution of the Central American Union in 1838, Nicaragua established itself independently. A United States naval force intervened in 1909 after two American citizens had been executed, and a few U. S. Marines were kept in the country from 1912 to 1925. The Bryan-Chamorro Treaty of 1916 gave the United States an option on a canal route through Nicaragua, and naval bases in the Gulf of Fonseca on the Pacific coast and on Corn Islands on the Atlantic side. Disorder after the 1924 elections brought in U. S. Marines again, but they were withdrawn gradually after the U. S.-supervised elections of 1928.

General Anastasio Somoza was elected President in Dec. 1936 and ruled the country until Sept. 1956, when he was assassinated. His son, Luis, succeeded him.

GOVERNMENT AND DEFENSE. The Constitution of 1950 provides for a President popularly elected for six years, and a two-house Congress—a 42-member Chamber of Deputies and a 16-member Senate—both elected for six years. Former Presidents of the republic automatically become Senators. There are sixteen regional departments. Military service is voluntary. The Guardia Nacional, both an army and police force, numbers about 3,500. A naval base built at the Pacific port of Corinto by the U. S. during World War II was turned over to Nicaragua in 1946.

SOCIAL AND ECONOMIC CONDITIONS. Although primary education is free and compulsory, about 60 per cent of the people are illiterate. There is one university and several vocational schools. In 1953 there were 3,593 schools of all kinds with 123,832 pupils. Western Nicaragua, with about 75 per cent of the population, is inhabited principally by mestizos of Spanish and Indian blood, with some whites and Indians. Negroes and Indians are dominant in eastern Nicaragua.

More than half of Nicaragua is jungle-covered; agriculture, the leading industry, utilizes only 10 per cent of the total land. Coffee (production 1956-57 season: 350,000 bags of 132 lbs. each) is the chief crop and grows in the western part, which also produces sugar cane, cacao, sesame, beans, rice, tobacco and corn, the chief subsistence crop. Bananas lead in the eastern part, with cotton second. About 900,000 acres are devoted to livestock grazing. Except for some sugar refining, only locally consumed products are manufactured in Nicaragua.

Recent foreign trade data are as follows (in millions of U. S. dollars):

	1954	1955	1956 ¹
Exports*	62.8	79.9	65.1
Imports	58.3	69.6	68.8

* Including gold.

Chief exports in 1956 were cotton (36%), coffee (36%) and gold (12%). Leading customers were the U. S. (39%), Germany (23%) and the Netherlands (11%); leading suppliers, the U. S. (63%), Germany (7%) and the Netherlands Antilles (7%).

Recent public finance data are as follows (in millions of córdobas):

	1954-55*	1955-56*	1956-57*
Revenue	258.0	238.0	264.8
Expenditure	258.0	240.3	272.2

* Budget estimate.

NATURAL FEATURES AND RESOURCES; CLIMATE. Largest but most sparsely populated of the Central American nations, Nicaragua is mountainous in the west, with fertile valleys. A plateau slopes eastward toward the Caribbean.

Two big lakes—Nicaragua, about 100 miles long, and Managua, about 38 miles long—are connected by the Tipitapa River. The Pacific coast is bald and rocky; the Caribbean coast, swampy and indented, is aptly called the "Mosquito Coast."

Gold (production 1956: 217,140 troy oz.) and silver are the most important minerals. One-third wooded, Nicaragua produces mahogany, rosewood, cedar, rubber and ipecac root. In 1955, Nicaragua exported 37,347,000 bd. ft. of logs and lumber.

The highlands are generally cool, while the coasts are hot and sultry. The east coast receives up to 100 inches of rain a year. The wet season is generally from May or June through November or December.

Norway (Kingdom)

(Norge)

Area: 125,064 square miles.

Population (est. Dec. 31, 1956): 3,478,000 (Norwegian, 98.7%; Swedish, .8%; others, .5%).

Density per square mile: 27.7.

Sovereign: King Olaf V.

Prime Minister: Einar Gerhardsen.

Principal cities (est. 1956): Oslo, 455,000 (capital, chief port); (census 1950) Bergen, 112,845 (seaport, shipbuilding); Trondheim, 56,669 (seaport, timber, fish); Stavanger, 50,647 (seaport, fisheries).

Monetary unit: Krone.

Language: Norwegian.

Religions: Evangelical Lutheran (state), 96.8%; others, 3.2%.

HISTORY. Norwegians, akin to Swedes and Danes, are of Teutonic origin. In the 7th and 8th centuries, Vikings from Norway constantly attacked the British Isles,

and in the 9th century many of them settled in what are now Ireland and Normandy. Norway became a united kingdom in 872 under King Harald Haarfager. Christianity was introduced in the 10th century by King Olaf I.

Under the rule of Haakon IV (1217-63), Norway reached a peak of power, ruling the Shetland and Orkney Islands, Iceland, Greenland and the Hebrides. In 1319 Norway and Sweden were united under King Magnus VII, and in 1397 Denmark joined this union under Erik of Pomerania.

In 1450 the triple bond gave way to a union in which Norway was closer to Denmark, but the Treaty of Kiel, in 1814 at the end of the Napoleonic Wars, ceded Norway to Sweden. Norway protested and declared itself independent. Sweden thereupon invaded Norway and forced the issue, requiring Norway to recognize the King of Sweden but leaving Norway its own government, army, navy and customs.

After this union was dissolved in 1905, Prince Karl of Denmark was elected King of Norway by the Storting (parliament) and ascended the throne as Haakon VII. During World War I, Norway was able to preserve its neutrality, though it suffered greatly from the Allied blockade and from the loss of many merchant ships. In World War II, Norway was invaded by the Germans on April 9, 1940, and resisted for two months before Nazi control was complete. On June 7, King Haakon and the government fled to London and established a government-in-exile.

Meanwhile, in Norway, a new word was born—quisling. It was derived from Major Vidkun Quisling, a Norwegian traitor who collaborated with the Germans and who was Minister President of the German-sponsored occupation government. Quisling eventually was executed by the Norwegians in Oct. 1945.

King Haakon and the government returned immediately after the German collapse in May 1945, and an interim coalition Cabinet took over, headed by Einar Gerhardsen. The latter's Labor party won a majority in the general elections of Oct. 8, 1945, and an all-Labor Cabinet formed on Nov. 5, 1945, led the nation thereafter.

Despite Soviet pressure, Norway adhered to the North Atlantic Pact in April 1949.

RULER. Olaf V, born July 2, 1903, only son of Haakon VII and Princess Maud (1869-1938), third daughter of Edward VII of England, succeeded to the throne on the death of his father Sept. 20, 1957. He married Princess Märtha of Sweden (1901-1954) on March 21, 1929. Their children are Princess Ragnhild Alexandria (born 1930), Princess Astrid (born 1932) and Prince Harald (born 1937).

GOVERNMENT AND DEFENSE. Norway is a constitutional and hereditary monarchy with succession in the direct male line. The King's executive power is exercised by a Council of State, or Cabinet, consisting of the Prime Minister and at least seven other councillors. The 150 members of the Storting are popularly elected for a term of 4 years under proportional representation. When assembled, the Storting divides itself by election into two sections, the Lagting, composed of one-fourth of the members (38) and the Odelsting, composed of the rest. The Storting has a predominant position in the government since the Cabinet is responsible to it. Moreover, the King cannot dissolve it before the expiration of its term. There is universal suffrage for all citizens, male or female, over 23. Party representation in the Storting (elections of Oct. 12, 1953) is Labor 77; Conservative 27; Liberal 15; Agrarian 14; Christian People's 14; Communist 3.

The Department of Defense serves as a coordinating body for the army, navy and air force. The army is a national militia with compulsory service from 18 to 55. Army strength in 1955 was about 20,000. The navy in Dec. 1956 had 5 fleet destroyers, 8 submarines, 12 frigates and escort vessels and other minor ships.

SOCIAL AND ECONOMIC CONDITIONS. Education is compulsory and free from 7 to 14. Illiteracy is almost unknown. In 1952-53, elementary schools had enrollment of 355,655 and secondary schools had 46,296. There are 2 universities—Oslo (3,308 students in 1953) and Bergen (382).

Land suitable for cultivation, estimated at less than 5 per cent of the total area, consists of strips in the deep narrow valleys and around fiords and lakes. Food-stuff production is insufficient to meet domestic needs. Leading crops, with 1956 production in metric tons, are wheat, 56,000; barley, 288,000; oats, 167,000; potatoes, 1,406,000; hay and fodder. The country is more adapted to stock raising than to crop growing; in 1956, there were 1,111,812 cattle, 1,825,908 sheep, 506,597 hogs and 110,378 goats.

Raw materials produced in Norway form the basis of most of the manufactures. Leading industries are food, machinery, metals, wood, paper and electro-chemicals. On March 31, 1957, 79 vessels of 290,101 gross tons were under construction in Norwegian yards.

Statistics of foreign trade are as follows, in millions of kroner:

	1954	1955	1956
Exports	4,167	4,522	5,516
Imports	7,277	7,783	8,644

In 1956 the leading customers were Britain (19%), western Germany (12%), Sweden (10%) and the U. S. (9%). Leading

suppliers were Britain (19%), western Germany (18%), Sweden (14%) and the U. S. (10%). Chief exports were base metals (25%), fish and fish preparations (14%), pulp and waste paper (10%) and paper and manufactures (9%).

The normally adverse trade balance is offset to some extent by invisible exports, particularly the earnings of the large merchant marine.

Norway is one of the greatest seafaring nations and its merchant marine of 2,442 vessels (100 tons and over) of 8,035,340 gross tons (June 30, 1956) is the third largest in the world. The long Norwegian coast line and the difficulties of inland transportation make coastal shipping important. In 1954 there were 2,800 mi. of railway and 29,000 mi. of highway.

Recent public finance data are as follows, in millions of kroner:

	1955-56*	1956-57*	1957-58*
Revenue	4,577	5,114	5,479
Expenditure	4,577	5,114	5,514

* Budget estimate.

The public debt on Dec. 31, 1956, was 7,719,000,000 kr.

NATURAL FEATURES AND RESOURCES; CLIMATE. Nearly 70 per cent of Norway is uninhabitable and covered by mountains, glaciers, moors and rivers. Its extreme length from the Skagerrak to North Cape—Europe's most northerly point, far above the Arctic Circle—is about 1,100 miles. Breadth averages 60 miles, with a maximum of 260. The hundreds of deep fiords that cut into Norway's coast line give it an over-all ocean front of more than 12,000 miles. Islands off the coast, numbering almost 150,000, form a breakwater and make a safe coastal shipping channel. The Lofoten and Vesterålen Islands, off the northwest coast, have an area of about 1,560 square miles.

Mineral resources are extensive, but coal deposits are entirely lacking except in Spitsbergen. Important minerals (1956 production in metric tons): iron ore (metal content 65%), 1,550,000; aluminum, 92,700; pyrite ore, 850,000; zinc, 48,000; and copper ore, molybdenum ore, tungsten, antimony ore, tin, silver.

Cheap electric power, produced mainly by hydroelectric plants (production 1956: 23,376,000,000 kwh.), makes possible the extraction of nitrogen from the air and manufacture of potassium nitrate, an important fertilizer.

The forests, largely in the south and southeast, are one of the chief natural resources. About 25 per cent of the total area is covered with forests, of which 70 per cent is pine. Timber production in the 1955-56 season was about 8,500,000 cu. m. Production of paper and cardboard in 1955

was 596,000 metric tons; chemical pulp (1956), 594,685 tons; mechanical pulp (1956), 657,950 tons; pulpwood (1955-56), 4,150,000 cu. m.; newsprint (1955), 165,000 tons.

Fishing is one of the principal industries, engaging as many as 100,000 persons annually. A large number of the best European food fisheries are situated along the coast. The 1956 catch totaled 1,959,689 metric tons valued at 691,500,000 kr. Norwegians are the world's leading whalers and were the first to develop pelagic (open sea) whaling. Whale oil production in the 1955-56 season was 859,246 barrels.

The Gulf Stream affects the climate mildly. Summer temperatures range from about 50° in the extreme north to 60.6° at Oslo in July. February temperatures in Oslo average 24°, against 11° to -12° in the north. Norway is one of the lands of the midnight sun; in the extreme north for many weeks in the summer the sun never sets, and for an equal time in the winter the sun does not rise. Rainfall is heavy in the coastal regions but decreases sharply inland.

OUTLYING TERRITORIES

SPTSBERGEN (SVALBARD).

This arctic archipelago, with an area of 23,957 square miles, lies about 400 miles north of Norway and consists of West Spitsbergen (about 15,000 sq. mi.), North-East Land (about 6,000 sq. mi.), Edge Island (2,300 sq. mi.), Barents Island (580 sq. mi.), and several small islands including Bear Island. The group was probably discovered by Norwegians in A.D. 1194 and rediscovered by the Dutch navigator Barents in 1596. The question of sovereignty was long unsolved. By a treaty signed with the disputing nations on Feb. 9, 1920, however, Norwegian sovereignty was recognized, and Norway declared the area a part of the kingdom Aug. 14, 1925. Spitsbergen was occupied by Allied forces in the summer of 1941. Soviet proposals for establishment of joint military bases were rejected by Norway in Feb. 1947.

In the 18th and 19th centuries, Spitsbergen was a whaling center, but now the only important product is coal, which is mined by both Norwegians and Russians (1956 Norwegian production: 390,000 metric tons). Population (1952-53) 3,257, largely miners, none indigenous.

JAN MAYEN ISLAND.

This arctic island (144 sq. mi.), lying between Greenland and the north of Norway, was discovered by Henry Hudson in 1607. It was annexed to Norway May 8, 1929. A Norwegian weather station was established in 1921, and during World War II a U. S. Navy weather station was maintained on the island. It is otherwise uninhabited.

OTHER TERRITORIES. Norway also exercises sovereignty over Bouvet Island (22 sq. mi.) in the South Atlantic, Peter I Island (94 sq. mi.) in the Antarctic Ocean, and that part of the Antarctic continent lying between 20 degrees and 45 degrees east. All are uninhabited.

Outer Mongolia. See Mongolian People's Republic

Palestine. See Israel; Jordan

Panamá (Republic) (República de Panamá)

Area: 28,753 square miles.

Population (est. July 1, 1956): 934,000 (1940: mestizo, 65.34%; Negro, 13.31%; white, 11.07%; Indian, 9.53%; others, 75%).

Density per square mile: 32.5.

President: Ernesto de la Guardia, Jr.

Principal cities (census 1950): Panamá City, 127,874 (capital and chief port); Colón, 52,204 (chief Caribbean port); Ciudad David, 14,847 (bananas).

Monetary unit: Balboa.

Language: Spanish (official).

Religion: Roman Catholic, 93%; Protestant, 6%; others, 1%.

HISTORY. Visited by Columbus in 1502 on his fourth voyage and explored by Balboa in 1513, Panamá was the principal transshipment point for Spanish treasure and supplies to and from South and Central America in colonial days. In 1821, when Central America revolted against Spain, Panamá joined Colombia, which already had declared its independence. For the next 82 years, Panamá attempted unsuccessfully to break away from Colombia. After U. S. proposals for canal rights over the narrow isthmus had been rejected by the Colombian Senate, Panamá proclaimed its independence with U. S. backing in 1903. U. S. Marines restrained Colombian intervention.

For canal rights in perpetuity, the United States paid Panamá \$10,000,000, and agreed to pay \$250,000 each year, increased to \$430,000 after devaluation of the U. S. dollar in 1933 and to \$1,930,000 under a revised treaty signed Jan. 25, 1955. In exchange, the United States got the Canal Zone, a ten-mile-wide strip across the isthmus, and a considerable degree of influence in Panamá's affairs.

During World War II the U. S. was granted the right to establish a number of bases in Panamá. All were evacuated in 1948 after the Assembly rejected a 10-year lease agreement on Dec. 22, 1947.

GOVERNMENT. Under the 1946 Constitution, the Assembly and the President are

elected for 4-year terms, with the President ineligible to succeed himself. Panamá has no army or navy, but has a national police corps numbering 2,000.

SOCIAL AND ECONOMIC CONDITIONS. Although education is free and compulsory between 7 and 15, 28.2% of the population 10 years of age and over (excluding tribal Indians) could not read and write in 1950. In the year 1954-55 there were 1,081 public and private primary schools with enrollment of 132,743; post-primary students numbered 23,783 and the national university at Panamá City had 1,955 students.

About five-eighths of the nation is unoccupied. A fourth of the population is in Colón and in Panamá City, the oldest white settlement on the Pacific coast of the Americas. In the cities, the lower classes are Negro and Negroid, descendants of British West Indian laborers on the canal.

Bananas are the main agricultural crop; others are cacao, tobacco, abacá, rubber, rice, coffee and sugar cane, all of which are exported, as are cattle, hides and gold. Imports in 1955 were \$75,684,653; domestic exports, \$19,281,795; re-exports, \$2,397,128. Chief exports were bananas (64%) and fresh shrimp (14%). The U. S. was the leading customer (94%) and supplier (60%).

The Panama Canal is the country's biggest economic asset. About a third of the national income is ordinarily derived from the wages of Panamanians working in the Canal Zone, or from cash spent by U. S. personnel in the Zone.

The main railway is the U. S. Government-owned Panamá Railroad, 47.64 miles long, bridging the isthmus from Panamá City to Colón. In recent years many foreign ships have been registered in Panamá to escape high labor costs and governmental regulations in other nations; in 1956, the merchant marine consisted of 556 vessels (100 tons and over) of 3,925,751 gross tons, making it one of the largest in the world.

NATURAL FEATURES; CLIMATE. Panamá, roughly the size of South Carolina, runs east to west for 420 miles from Costa Rica to Colombia, and has a maximum width of 118 miles, with 477 miles of Caribbean coast and 767 on the Pacific. At the narrowest and lowest point, the canal bisects the country. Outlying islands number about 630 in the Caribbean and 116 in the Pacific. Panamá steps up from coastal lowlands, with extremely heavy rainfall (150 inches or more), to upland valleys and plateaus covered by dense forest and a few mountain peaks, some volcanic, near the Costa Rican border.

Paraguay (Republic) (República del Paraguay)

Area: 157,047 square miles.

Population (est. 1956): 1,601,000 (1950: mestizo, 94.9%; white, 3.0%; Indian, 2.1%).

Density per square mile: 10.2.

President: Gen. Alfredo Stroessner.

Principal cities (census 1950): Asunción, 201,340 (capital); Villarrica, 14,680 (sugar, tobacco); Concepción, 14,640 (port, Paraguay river); Encarnación, 13,321 (rail terminus).

Monetary unit: Guaraní.

Languages: Spanish (official), Guaraní.

Religion: Roman Catholic (official).

HISTORY. Paraguay, a landlocked South American country with a good river outlet to the South Atlantic, is about the size of Montana and, more often than not, is under the rule of a dictator-president.

In 1526 and again in 1529, Sebastian Cabot explored the area when he sailed up the Paraná and Paraguay Rivers. Domingo Martínez de Irala, a Spaniard, founded Asunción in 1537 and became the dominant figure in Paraguay for the next two decades. From 1608 until their expulsion from the Spanish dominions in 1767, the Jesuits maintained an extensive establishment in the south and east of Paraguay. In 1811 Paraguay revolted against Spanish rule and became a nominal republic under two Consuls, one of whom, Dr. José Rodríguez Francia, ruled as absolute dictator until his death in 1840. His dictator successor, Carlos Antonio López, was succeeded in 1862 by his son, Francisco Solano López, under whose leadership Paraguay lost a good part of its population in a disastrous five-year war with Argentina, Brazil and Uruguay.

Paraguay remained neutral in World War I. Economic and financial exhaustion resulted from the war with Bolivia (1932-35), after which Paraguay was awarded three-fourths of the disputed Gran Chaco region (1938).

Juan Natalicio González, elected President in the Feb. 1948 elections, took office Aug. 15, but successive revolts on Jan. 30 and Feb. 26, 1949, ousted him and his successor. The leader of the latter revolt, Felipe Molas López, was elected President on Apr. 17, but gave way to Federico Chaves on Sept. 11, 1949. Chaves was re-elected Feb. 15, 1953, but was ousted by the army on May 5, 1954, and on July 11 Gen. Alfredo Stroessner was elected to complete his term.

GOVERNMENT AND DEFENSE. Since adoption of the 1940 Constitution, Paraguay has been a semi-authoritarian republic which elects a President every five years by popular vote, and a one-house Congress on a population basis. There is also a Council of State, somewhat equivalent to an upper house, its members named

by the government. The presidentially-appointed Cabinet administers the government and is required merely to inform the Congress and Council of its policy.

The army numbers approximately 6,000. Military service is compulsory for two years. For patrolling the Paraguay River, the country's life line, there is a navy of about 1,400 men with two gunboats and three armed patrol boats.

SOCIAL AND ECONOMIC CONDITIONS. The illiteracy rate is unofficially estimated at 60 per cent, one of the highest in South America. Education is free and in theory compulsory. In 1953 there were 252,393 pupils attending 1,794 elementary schools. The University of Paraguay at Asunción had 2,100 students in 1953, and there are several normal and agricultural schools.

The Paraguayans are a homogeneous blend of Spanish, Portuguese and Italian, with considerable Guaraní Indian blood. There are almost no Negroes; the 35,000 to 50,000 uncivilized Indians live mainly in the Chaco. The country is 90 per cent bilingual, with Guaraní dominating over Spanish (the official language) in rural areas.

A well-favored land, Paraguay is predominantly a cattle country, keeping about 3,500,000 head. The soil is fertile and the climate suitable for subtropical crops. The chief cash crop is cotton (production 1955-56: 45,000 bales of 500 lb. each); the staple food crop is manioc. Other crops are rice, maize, yerba maté, tobacco, sugar, peanuts and fruits. Oil of petit-grain, an important perfume ingredient, is extracted from the leaves of the bitter orange.

Foreign trade data are as follows (in millions of U. S. dollars):

	1954	1955	1956
Exports	33.97	35.10	36.69
Imports	32.88	28.96	24.63

Chief exports in 1956 were timber (32%), quebracho extract (18%) and cotton (15%). Principal customers and suppliers in 1955 were Argentina, the U. S. and Britain.

Railway mileage is about 700. In 1956 there were some 625 mi. of modern highways. Domestic air service is furnished by the nationalized Línea Aérea de Transporte Nacional (LATN). Several foreign lines supply international service.

NATURAL FEATURES AND RESOURCES; CLIMATE. Eastern Paraguay, between the Paraná and Paraguay Rivers, is upland country with the thickest population settled on the grassy slope that inclines toward the Paraguay River. The greater part of the Chaco region, to the west, is covered with marshes, lagoons, dense tropical forest and jungle.

Forest resources are considerable, especially in the Chaco. Quebracho—the

"Axe-breaker," a wood so heavy that it will not float—is the principal commercial tree. The wood has many uses, from paving blocks to ox-cart wheels. Quebracho tannic extract is the chief product. Its export is limited by agreement with Argentina.

In the east, temperature averages about 81° in summer (December-February) and 64° in winter (May-August). From Asunción, with an annual average greater than 60 inches, the rainfall decreases in the west.

Peru (Republic)

(República del Perú)

Area: 482,258 square miles.

Population (est. 1956): 9,651,000 (white and mestizo, 53%; Indian, 46%; Asiatic, Negro and others, 1%).

Density per square mile: 20.0.

President: Manuel Prado y Ugarteche.

Principal cities (est. Dec. 31, 1952): Lima, 926,400 (capital); Callao, 104,500 (port of Lima); Arequipa, 100,900 (commercial center); Cuzco, 58,200 (ancient Incan capital); Trujillo, 49,600 (mining).

Monetary unit: Sol.

Languages: Spanish, Quéchua, Aymará (Indian).

Religion: Roman Catholic.

HISTORY. Peru, once part of the great Incan empire and later the major viceroyalty of Spanish South America, is more than three times the size of California. It was conquered in 1531-33 by Francisco Pizarro. On July 28, 1821, Peru proclaimed its independence, but the Spanish were not finally defeated until the Battle of Ayacucho on Dec. 9, 1824. For a hundred years thereafter the Peruvian course was rough. Revolutions were frequent, and a new war was fought with Spain in 1864-66. The dispute with Chile over Tacna and Arica was not finally settled until 1929.

Peru emerged from 20 years of dictatorship on July 28, 1945, with the inauguration of President José Luis Bustamante y Rivero after the first free election in many years had been held. In a Cabinet reorganization of Jan. 12, 1947, three members of the leftist APRA party, which had contributed largely to Bustamante's election, were eliminated. The rightist-APRA cleavage came to a head on Oct. 28, 1948, when an army-led rightist revolt headed by Gen. Manuel A. Odría ousted Bustamante. Odría was unopposed in presidential elections held July 2, 1950. Conservative Manuel Prado y Ugarteche, President from 1939 to 1945, was chosen by a narrow margin to succeed him in elections held June 22, 1956.

GOVERNMENT AND DEFENSE. Under the 1933 Constitution, Peru elects by popular vote every six years a President, two Vice-Presidents and a bicameral Congress—a Senate of 52 members and a Chamber of

183 members. The President is ineligible to succeed himself. The Cabinet, headed by the Prime Minister, is presidentially appointed.

Military service is compulsory at the age of eighteen. The authorized strength of the army is 32,000. The navy in 1956 had 6 frigates and escort craft, 6 submarines and other smaller units. There are about 10,000 police and civil guards.

SOCIAL AND ECONOMIC CONDITIONS. Peru, once the cultural center of Spanish South America, has an illiteracy rate of over 50 per cent. Education between 7 and 16 is free, compulsory and state-controlled. Public and private primary schools numbered 11,743 in 1954 with 1,039,455 pupils; 325 state and private secondary schools had 87,423 students. Five universities had 13,521 students in 1952, including the University of San Marcos, founded in 1551 (oldest in America) with 8,771.

Most Peruvians are of mixed Spanish and Indian blood. The Indians come from three main stocks—Quéchua, Aymará (Colla) and Chuncho. There is a relatively large Asiatic population.

Land under cultivation is estimated at only slightly more than 10 per cent of the total area, with more than 80 per cent of the population being dependent upon agriculture. About one-eighth of the cultivated area in the irrigated coastal valleys of the central region is devoted to cotton, the most important crop (1956-57 production: 110,000 metric tons). Sugar (1956-57: 730,000 tons), rice, tobacco and coffee are exported, while wheat, corn, potatoes, beans, barley and quinoa (a grain similar to millet) are subsistence crops. Stock-raising, pursued in the Pacific highlands and the elevated parts of the Amazon slope, supplies most of the country's meat needs, as well as wool, hides and skins for export. Llamas, used as beasts of burden, and vicuñas and alpacas, noted for their wool, are native to Peru. Livestock estimates in Dec. 1955 showed 3,439,000 cattle, 16,505,000 sheep, 1,341,000 hogs and 3,380,000 alpacas and llamas (1952).

Industrialization has been slow. Aside from the copper smelters and oil refineries, the greatest progress has been made in the textile industry, which obtains its raw materials from domestic cotton and wool and from imported silk.

Foreign trade statistics, in millions of soles, are as follows:

	1954	1955	1956
Exports	4,792	5,146	5,917
Imports	4,916	5,764	6,934

Chief exports in 1956 were cotton (28%), sugar (11%), copper (11%) and lead (10%). Chief suppliers were the U. S. (50%), western Germany (10%) and Britain (9%); chief customers, the U. S.

(37%), Britain (11%) and Chile (9%). Principal Peruvian imports are machinery and motor vehicles, foodstuffs (especially wheat), iron and steel manufactures, electrical goods and chemicals.

Highway mileage in 1951 totaled 19,500, of which more than a third is hard-surfaced; the Pan-American highway had a total Peruvian length of 1,818 miles. Railway mileage (1951) was 2,800.

NATURAL FEATURES AND RESOURCES; CLIMATE. The Andes Mountains divide Peru into three sharply differentiated zones. To the west is the coastland, much of it arid, extending for 50 to 100 miles inland, and 1,400 miles long.

The mountain area, with peaks over 20,000 feet high, lofty plateaus and deep valleys, lies centrally. Beyond the mountains to the east is the heavily forested slope leading to the Amazonian plains.

Peru has vast mineral resources. It ranks fifth in world silver production and mines about 25 per cent of the world's vanadium. But mining is second to agriculture, and nearly all of it is in the hands of foreign capital. Petroleum and copper are the most important, with the latter controlled by the American-owned Cerro de Pasco Corporation, which also accounts for much of the gold and silver output. In 1956, gold production was 194,849 oz.; silver, 21,833,000 oz.; copper (smelter), 35,005 short tons; lead, 66,546 tons; zinc (in ore), 176,584 tons; iron ore (metal content 60%), 2,960,000 tons. Petroleum production in 1956 was 18,360,000 barrels; discovery of rich new deposits has been reported.

Forest products include rubber (1953: 3,311 metric tons), balata, raw quinine, vegetable ivory, mahogany, cedar, dye woods and coca, the source of cocaine. An important industry on the outlying islands is the gathering of guano (bird excrement), a valuable fertilizer used almost entirely domestically.

The climate ranges from tropical in the eastern lowlands to arctic among the snow-capped peaks. The coastal area has an average annual rainfall of less than 2 inches and temperatures ranging between 55° and 98°. Temperatures range from 75° to 95° in the humid Montaña, and rainfall between 75 and 125 inches annually.

The Philippines (Republic)

Area: 114,830 square miles.

Population (est. Dec. 31, 1956): 22,056,100 (Filipino, except [1948] 121,702 Chinese, 6,955 Americans, 1,886 Spanish and 3,319 others).

Density per square mile: 192.1.

President: Carlos P. Garcia.

Principal cities (est. 1952): Manila, 1,158,260 (seat of government, chief port); Cebu, 175,950 (seaport); Quezon City, 159,730 (legal, future capital); Basilan, 141,640 (lumber); Bacolod 126,200 (sugar); Zamboanga, 124,710 (seaport).

Monetary unit: Peso.

Languages: English, Tagalog, Bisayan, Spanish, Ilocano, Bicol.

Religions (census 1948): Roman Catholic, 82.9%; Aglipayan (Independent Philippine Catholic), 7.6%; Moslem, 4.1%; Protestant, 2.3%; others, 3.1%.

HISTORY. Fernando Magellan, the Portuguese navigator in the service of Spain, discovered the Philippines on March 16, 1521, and 21 years later a Spanish exploration party named the group of islands in honor of Prince Philip, later Philip II of Spain. Spain retained possession of the islands for the next 350 years.

The Philippines were ceded to the United States in 1899 by the Treaty of Paris after the Spanish-American War. Meanwhile the Filipinos, led by Emilio Aguinaldo, had declared their independence. They continued guerrilla warfare against U. S. troops until the capture of Aguinaldo in March 1901. By July 1902, peace was established except among the Moros.

The first U. S. civilian Governor-General was William Howard Taft (1901-04). The Jones Law (1916) provided for the establishment of a Philippine Legislature composed of an elective Senate and House of Representatives. The Tydings-McDuffie Act (1934) provided for complete Philippine independence in 1946. Under a Constitution approved by the people of the Philippines May 14, 1935, the Commonwealth of the Philippines was inaugurated on Nov. 15 under the presidency of Manuel Quezon y Molina, who was re-elected in 1941.

The Philippines were invaded by Japanese troops on Dec. 8, 1941 (Philippine time), and after the fall of Bataan and Corregidor, President Quezon and his government fled to Washington, D.C. U. S. forces led by Gen. Douglas MacArthur re-invaded the islands in Oct. 1944, and after the liberation of Manila (Feb. 1945), Sergio Osmeña, who had succeeded to the presidency on the death of Quezon (Aug. 1, 1944), re-established the government.

Brig. Gen. Manuel A. Roxas y Acuña, who defeated Osmeña in the elections of April 1946, became first head of the new independent republic, which came into existence on July 4, 1946, as scheduled in the Tydings-McDuffie Act. He died April 15, 1948, and was succeeded by the Vice President, Elpidio Quirino. The latter was re-elected on Nov. 8, 1949, but lost a second bid for re-election to Ramón Magsaysay, who took office on Dec. 30, 1953. On his death in a plane crash March 17, 1957, Magsaysay was succeeded by Vice-Pres. Carlos P. Garcia.

GOVERNMENT AND DEFENSE. Under the Constitution of 1935 (as amended in 1940), the Philippines have a republican form of government based on that of the United States. Executive power is exercised by the President, popularly elected for a 4-year term and assisted by a Cabinet appointed by him. The popularly elected Congress has two houses—the Senate with 24 members and the House of Representatives with 100 members.

The Philippine army has been reorganized and re-equipped with U. S. assistance. An agreement signed March 14, 1947, provided for the establishment, for a 99-year period, of 23 U. S. military, naval and air bases in the islands. A mutual defense treaty with the U. S. was signed Aug. 30, 1951.

SOCIAL AND ECONOMIC CONDITIONS.

Education. Education is free. The illiteracy rate (10 years and over) was 30% in 1952. In 1955 there were 26,576 elementary schools with 4,156,000 pupils and 1,620 secondary schools with 647,000 pupils. The state-supported University of the Philippines had 12,028 students in 1953-54. Tagalog is the national language but English and Spanish are used throughout the country.

Agriculture and Industry. Agriculture is the chief industry. Average size of the farms is 10 acres, but there are many large plantations. Rice (palay) is the staple native food cereal, but production (3,400,000 metric tons in 1956-57) is insufficient to meet home consumption. The Philippines normally produce about half the world copra supply and a large proportion of the abacá (Manila hemp) supply; they are also a leading source of sugar (1956-57: 1,100,000 metric tons, raw) and sugar products, normally the chief export. Other crops include sisal, kapok, cotton, corn, tobacco, coffee, rubber, cacao, citrus fruits and bananas. In the crop year 1955-56, 1,140,000 metric tons of copra, 38,400 tons of tobacco and 120,300 tons of abacá were produced. Livestock on March 31, 1956, included 3,590,580 carabao, the farmers' all-purpose animal, 836,080 cattle, 214,140 horses and 5,765,370 hogs.

There are no large industrial establishments and activity is limited primarily to the processing of agricultural and forest products, such as sugar cane, coconuts, tobacco, abacá and timber. Preparation of fine embroideries is an important industry.

Foreign Trade. Statistics of trade, in millions of pesos, are as follows:

	1954	1955	1956
Exports	792	779	902
Imports	974	1,095	1,013

In 1956, the chief exports were copra and other coconut products (39%), sugar (22%), wood (11%) and abacá (8%). Leading customers were the U. S. (54%),

Japan (18%) and the Netherlands (9%); leading suppliers, the U. S. (59%), Japan (10%) and Indonesia (4%). Leading imports were machinery and vehicles, cotton and manufactures, iron and steel, and petroleum and products.

Finance. Recent data are as follows (in millions of pesos):

	1955-56	1956-57*	1957-58†
Revenue	736.2	748.9	846.4
Expenditure	734.4	748.7	845.6

* Revised budget estimate. † Initial budget estimate.

The total public debt on June 30, 1957, was 1,636,629,665 pesos.

Communication. The inter-island trade—extremely important because of the makeup of the archipelago—is served by vessels licensed for domestic, coastwise and bay and river traffic. The port of Manila has ample facilities for ocean-going vessels. According to *Lloyd's Register*, the merchant marine had 91 vessels (100 tons and over) of 133,621 gross tons in 1956.

Railway mileage in 1956 totaled 690, most of which was on Luzon. Highways totaled 19,550 mi. in 1955. Domestic lines flew 5,221,208 mi. and carried 369,718 passengers in 1956.

NATURAL FEATURES AND RESOURCES; CLIMATE. The Philippines are an archipelago of approximately 7,083 islands lying about 500 miles off the southeast coast of Asia. The northernmost island, Y'Ami, is 65 miles from Formosa, while the southernmost, Saluag, is 30 miles east of Borneo. Only 466 of the islands have an area of more than one square mile, and only 2,441 have names. The largest islands are Luzon in the north (40,814 sq. mi.), Mindanao in the south (36,537 sq. mi.), Samar (5,124 sq. mi.), Negros (4,903 sq. mi.), and Palawan (4,550 sq. mi.).

Minerals, Forests and Fisheries. The Philippines possess large but relatively undeveloped mineral resources. Most important are gold, silver, iron ore, copper ore, chromite, manganese ore, lead and zinc. Petroleum formations are also known to exist. In 1956, 406,163 ounces of gold, 541,168 ounces of silver, 26,963 metric tons of copper concentrates, 709,055 tons of chromite, 1,440,232 tons of iron ore (metal content 55%), 151,708 tons of coal, 4,414 tons of manganese and 2,140 tons of lead were mined.

The forest area is estimated at more than 43,700,000 acres (about 58 per cent of the total area), not including 3,200,000 acres covered with cogón grass, fit for grazing. About 97.5 per cent of the total forest area is government-owned. Lumber production totaled 378,936,006 bd. ft. in 1956; timber, 4,301,353 cu.m.

Climate. The temperature is warm throughout the year, averaging 80°, with only slight variations. Rainfall averages about 90-100 inches annually, with the wettest season occurring from June or July through October. Typhoons, often causing severe damage, originate in the Pacific and strike the islands from the east and southeast before curving north.

Poland (People's Republic)

(Polska Rzeczpospolita Ludowa)

Area: 120,442 square miles.

Population (est. Mar. 31, 1956): 27,680,000.

Density per square mile: 229.8.

Chairman of State Council: Aleksander Zawadski.

Premier: Josef Cyrankiewicz.

Principal cities (est. 1955): Warsaw, 965,000 (capital); Łódź, 670,000 (industrial center); Wrocław (Breslau), 490,000 (former German industrial center); Kraków, 430,000 (commercial center); Poznań, 370,000 (farm products).

Monetary unit: Złoty.

Language: Polish (more than 90%).

Religions: Roman Catholic, Jewish, Protestant.

HISTORY. Little of certainty is known about Polish history before the 11th century. Early in that century the Polish King, Boleslaus I (the Brave), ruled over Bohemia, Saxony and Moravia. Mongol invasions in 1241 and 1259 were repelled with accompanying devastation. Meanwhile, the Teutonic Knights were erecting in Prussia a state which included part of Poland and barred the latter's access to the Baltic. The Knights were defeated by Wladislaus II (1386-1434) at Tannenberg in 1410 and became Polish vassals under the Peace of Thorn (1466), by which Poland regained a Baltic shoreline.

Poland reached the peak of its power between the 14th and 16th centuries. The 16th century was marked by a constant growth of power on the part of the lesser nobility with a corresponding weakening of the Crown, which became elective in 1572. In succeeding years, Poles scored many military successes against the Russians and Turks. In 1683, King John Sobieski, a famous military leader, turned back the Turkish tide near Vienna.

These successes did not halt the process of decline which resulted from the lack of strong central authority, and Prussia, Russia and Austria were able to carry out a first partition of the country in 1772, a second in 1792 and a third in 1795-96. For more than a century thereafter, there was no Polish state, but the Poles never ceased their efforts to regain their independence. World War I found them fighting unhappily on both sides.

The independence of Poland was formally proclaimed in Nov. 1918, and Marshal

Josef Pilsudski was confirmed in office as President. In 1919, Ignace Paderewski, famous pianist and patriot, became the first Premier. Russia attacked Poland in 1920 but the Poles, under Marshal Pilsudski and aided by the French, defeated the invaders. On May 12, 1926, Marshal Pilsudski seized complete power in a *coup d'état* and ruled the country dictatorially until his death on May 12, 1935, when he was succeeded by Marshal Edward Smigly-Rydz.

Despite a 10-year nonaggression pact signed with Germany in 1934, Hitler attacked Poland on Sept. 1, 1939. Russian troops invaded from the east Sept. 17, 1939, and on Sept. 28 a German-Russian agreement was signed dividing Poland between Russia and Germany. W. Raczewicz formed a government-in-exile in France with Gen. Wladyslaw Sikorski as Premier; this government moved to London after France's defeat in 1940.

All of Poland was occupied by Germany after the Nazi attack on the Soviet Union in June 1941. On July 30, 1941, Poland concluded an agreement with the U.S.S.R. voiding all German-Soviet agreements effected after Sept. 1, 1939.

The legal Polish government soon fell out with the Russians, however, and in July 1944, a Communist-dominated Polish Committee of National Liberation received Soviet recognition. Moving to Lublin after that city's liberation, it proclaimed itself the Provisional Government of Poland on Dec. 31, 1944. Some former members of the Polish Government in London joined with the Lublin government to form the Polish Government of National Unity on June 28, 1945. Great Britain and the U. S. recognized this government on July 5, 1945.

On Aug. 2, 1945, in Berlin, Prime Minister Attlee, President Truman and Generalissimo Stalin established a new *de facto* western frontier for Poland, along the rivers Oder and Lausitzer Neisse, pending a final peace treaty. On Aug. 16 the Soviet Union and Poland signed a treaty delimiting the Soviet-Polish frontier. Under these agreements Poland was shifted westward. In the east it lost 69,860 square miles with 10,772,000 inhabitants; in the west it gained (subject to final peace conference approval) 38,986 square miles with a pre-war population of 8,621,000.

Democratic participation was negligible in the new government, which had adhered strictly to Soviet foreign policy and pursued a program of internal socialization. The government bloc controlled by the small Communist minority won a sweeping victory in the Jan. 1947 elections, which gave little opportunity to the opposition for campaigning or voting. In Nov. 1952, Aleksander Zawadzki was elected Chairman of the State Council under the new Constitution, and former President Boleslaw

Bierut was elected Premier. On March 19, 1954, he yielded to Josef Cyrankiewicz, who was Premier from 1947 to 1952, and became First Secretary of the Polish Communist party. A short-lived rebellion of workers at Poznan in June 1956 was speedily quelled. The Polish Communist Party asserted its independence of Soviet domination in Oct. 1956, and Wladyslaw Gomulka became first secretary.

GOVERNMENT AND DEFENSE. The 1952 Constitution is based on that of the U.S.S.R. The supreme organ of state authority is the Sejm, composed of 425 members elected for 4 years by all citizens over 18. It elects a State Council to act when it is not in session and also elects the Council of Ministers, headed by the Premier, which is the supreme executive and administrative organ. All the Sejm's members belong to the Communist-controlled National Front.

Poland's armed forces in 1956 numbered about 370,000, including security and frontier defense forces. The navy in 1956 had 2 destroyers, 4 submarines and some minesweepers and coastal craft.

SOCIAL AND ECONOMIC CONDITIONS. *Education.* In 1954-55 there were 23,103 primary schools with about 3,202,700 pupils. Secondary schools numbered 792 with 195,100 pupils. The 84 institutions of higher learning, including 8 universities, had 143,300 students. Education is free and compulsory up to 14.

Agriculture. Poland remains essentially an agricultural country: the areas now under *de facto* Polish administration in the west accounted for 25 per cent of Germany's pre-war food production. Farm lands lost to the Soviet Union were considerably larger in area than those gained from Germany.

Official production data are as follows (in thousands of metric tons):

	1954	1955	1956
Wheat	2,002	2,134	2,121
Rye	5,844	7,003	6,536
Oats	2,073	2,287
Potatoes	35,662	26,400
Sugar beets	6,950	7,286

In 1955 there were 7,912,200 cattle, 10,888,300 hogs and 4,243,200 sheep.

Industry. Industrial facilities, although severely damaged during World War II, were not greatly affected by territorial concessions to the U.S.S.R., with the exception of the Lwów area. On the other hand, important German industrial areas, especially Silesia and the city of Stettin, are located in the territories under *de facto* Polish administration. As a result, post-war Poland has a much larger industrial potential. Almost all industries have been nationalized or placed under state control, and a planned economy has been introduced as part of the government's drive to make Poland an industrial nation.

Official production figures are as follows (in thousands of metric tons):

	1954	1955	1956
Pig iron	2,663	3,112	3,504
Raw steel	3,949	4,427	5,016
Cotton yarn	109	114	116
Cement	3,403	3,813	4,032
Electric energy	15,469*	17,745*	19,488*

* Millions of kw.h.

Trade. Foreign trade is largely conducted by government bodies under the terms of numerous trade agreements with other nations. According to estimates of the U. N. Economic Commission for Europe, total trade (imports and exports) amounted to \$1,770,000,000 in 1954, including \$1,220,000,000 with nations of the Communist bloc. Major exports were coal and coke, other raw materials and semi-manufactures and agricultural products (mainly bacon and ham). Major imports were machinery, textiles, chemicals and mineral products.

Finance. The 1956 budget estimated revenue at 141,300,000,000 zlotys and expenditure at 137,700,000,000 zlotys.

Communications. The merchant marine had 150 vessels (100 tons and over) of 336,813 gross tons on June 30, 1956. The principal ports are Gdynia, with one of the largest harbors in Europe, Gdansk (Danzig) and the former German port of Stettin. There are about 61,000 miles of public highway, 4,800 miles of inland waterways and 14,350 miles of railway.

NATURAL FEATURES AND RESOURCES; CLIMATE. Most of Poland is a plain with no natural boundaries except the Carpathian Mountains on the south and the Oder and Neisse Rivers on the west. The central Polish plain, 300 to 450 feet above sea level and intersected by great rivers, lies south of the flat country along the Baltic shore.

The acquisition of large coal deposits in German Silesia (estimated at more than 5,000,000,000 tons), combined with much larger reserves in the southwestern region, makes Poland one of the world's leading coal producers. The 1956 output was 95,148,000 metric tons, a third of which was produced in former German territory. Iron ore deposits are located in the Kielce and Radom districts and in German Silesia (metal content 34%). Production in 1956 was 1,963,000 tons. Zinc and lead ores are located chiefly in Upper Silesia and the voivodships of Kielce and Kraków. Prewar Poland's principal oil-producing areas, Boryslaw-Drohobycz, are in the territory ceded to the Soviet Union; 1956 production was about 1,285,000 barrels (one-third of prewar). Among other deposits, Poland possesses copper, sulfur, chalk, clay, kaolin, marble and granite.

Forests cover 22 per cent of the land, but important wood resources are located in the territory ceded to the Soviet Union.

Poland's climate is dependent upon her proximity to the Baltic and to the Carpathian Mountains. Abundant rainfall (annual average: 22.8 in.) is caused by the predominating western oceanic winds. Snowfall is not heavy, but temperatures below zero are not uncommon, and the rivers are icebound for part of each year.

Portugal (Republic) (República Portuguesa)

Area: 35,358 square miles.

Population (est. 1956): 8,837,000 (practically all Portuguese).

Density per square mile: 249.9.

President: Gen. Francisco Higinio Craveiro Lopes.

Premier: António de Oliveira Salazar.

Principal cities (census 1950): Lisbon, 783,226 (capital, seaport); Oporto, 281,406 (seaport, port wine); Setúbal, 44,235 (seaport, sardines); Coimbra, 41,977 (university); Funchal (in Madeira Islands), 37,035 (Madeira wine).

Monetary unit: Escudo.

Language: Portuguese.

Religion: Roman Catholic.

HISTORY. Rolling and rugged Portugal is about the size of Indiana and, thanks to the days when its sailors and explorers were among the world's most venturesome, has a colonial empire 23 times the area of the homeland. A traditional ally of Britain, Portugal remained neutral in World War II but gave the Allies the right to use vital island bases in the Atlantic.

Portugal was part of Spain until it won independence in 1143 with Alfonso I as the first King. During the long reign of King John I (1385-1433), a great commercial empire was built, largely through the exploratory hobby of the King's son, Prince Henry the Navigator. Bartholomeu Diaz explored Africa's west coast and reached the Cape of Good Hope in 1488. Vasco da Gama rounded the Cape and discovered the water route to India in 1497-99. Portugal's empire reached its crest about 1540, when it embraced the coast of Brazil, east and west Africa, Malabar, Ceylon, Persia, Indo-China and Malaya.

In 1580-81 Spain and Portugal were joined in a personal union under Philip II of Spain. Portugal revolted in 1640 and set up a new dynasty under John IV, Duke of Braganza, but the country never recovered its position as one of Europe's major powers. In 1806, when Portugal refused to obey Napoleon's orders that all continental ports be closed to British ships, French forces invaded the country but were ousted in 1811 by British and Portuguese forces under the Duke of Wellington.

Brazil declared its independence in 1822 and John VI's son, Pedro, became Emperor of the new state as Pedro I. In 1832, Pedro I, who had abdicated as Emperor of Brazil in 1831, returned to Europe and led an uprising with British assistance in favor of his daughter, Maria II, displacing his younger brother, Miguel I, who had been proclaimed King in 1828. The descendants of Maria's marriage with Ferdinand of Saxe-Coburg ruled Portugal until 1910, when King Manoel II was forced into exile by a republican revolt.

On June 19, 1911, the monarchy was abolished, and a republican Constitution was introduced. Portugal proclaimed its loyalty to the British alliance upon the outbreak of World War I, and Portuguese troops fought both in Africa and on the Western Front.

On May 30, 1926, a revolution led by the army deposed the President and set up a military dictatorship. General António Oscar de Fragoso Carmona became Premier and acting President Nov. 29, 1926, and was elected President on March 25, 1928. Dr. António de Oliveira Salazar, who was appointed Finance Minister in 1928, founded the organization known as the National Union in 1930 and has been Premier and dictator since 1932. His regime, while admittedly opposed to liberal or democratic principles, brought political and economic stability to Portugal.

General elections for members of the National Assembly held on Nov. 18, 1945, Nov. 13, 1949 and Nov. 8, 1953 were, except in isolated districts in 1953, boycotted by the opposition, and the National Union was continued in office. Portugal adhered to the North Atlantic Pact in April 1949.

President Carmona died April 18, 1951; Gen. Francisco Lopes was elected without opposition to succeed him July 22, 1951. **GOVERNMENT AND DEFENSE.** Under the Constitution of 1933 Portugal is a corporative republic. The President is popularly elected for a term of 7 years; the National Assembly of 120 members for a term of 4 years. There is also a Corporative Chamber which handles economic, social and some legislative matters; its members are representatives of local autarchies and of the several branches of social activities—administrative, moral, cultural and economic. The Assembly theoretically may overrule the President's veto by two-thirds vote. The President appoints the Premier, who selects the Cabinet; the latter is not responsible to the National Assembly.

Military service is compulsory; the initial training period is 6 years, but not all those liable for duty are called up. The navy in 1956 had 5 destroyers, 3 submarines, 8 sloops and several smaller craft.

SOCIAL AND ECONOMIC CONDITIONS. Education is compulsory, but in 1950,

41.7% of the population (10 years and over) could not read and write. Primary schools numbered 14,943 in 1953-54, with 796,467 pupils; the 354 secondary schools had 58,721 pupils. There were 3 universities (Coimbra, Lisbon, Oporto) with 14,563 students.

Portugal's corporate state has a planned economy in which each producing unit regulates itself in the interest of the nation. Corporate units have been established in agriculture, industry and finance.

Sixty per cent of Portugal's people are engaged in agriculture. Although wheat is the leading crop, it is insufficient to meet domestic needs, and grain must be imported. One of the world's leading wine-makers, Portugal produces two famous kinds—Port in the vicinity of Oporto, and Madeira in the islands of the same name. In olive oil production, Portugal usually ranks third in the world (estimated production 1956-57: 91,000 metric tons).

Leading crops in 1956, in metric tons, were wheat, 568,000; barley, 78,000; oats, 81,000. Wine production in 1956 was about 266,000,000 U. S. gallons (1951-55 average: 270,000,000 gallons).

Wool production in 1955 was approximately 5,000 metric tons, clean basis.

Trade statistics, in millions of escudos:

	1954	1955	1956*
Exports	7,297	8,166	8,590
Imports	10,084	11,453	12,678

* Preliminary.

In 1956 the principal customers were the Portuguese overseas territories (24%), Britain (14%) and the U. S. (10%); chief suppliers, Germany (16%), the Portuguese overseas territories (12%) and Britain (14%). The chief exports were cork (19%), fish, mainly sardines (12%) and wine (8%). Main imports included wheat and flour, ships, industrial machinery, raw cotton and iron and steel.

On June 30, 1956, the merchant marine had 308 vessels (100 tons and over) of 536,765 gross tons. Railway mileage in 1954 was 2,250, and highway mileage was 18,300. **NATURAL FEATURES AND RESOURCES; CLIMATE.** Portugal is crossed by many small rivers, and also by three large ones which rise in Spain, flow into the Atlantic, and divide the country into three geographic areas. The Minho (Miño in Spain) River, part of the northern boundary, cuts through a mountainous area that extends south to the vicinity of the Douro (Duero) River. South of the Douro the mountains slope to the plains about the Tagus (Tejo) River. The remaining division is the southern one of Alentejo.

The Azores, stretching over a distance of 400 miles in the Atlantic, consist of 9 islands divided into three groups, with

total area of 888 square miles. The nearest continental land is Cape da Roca, Portugal, which lies 800 miles to the east. The Azores are an important station on Atlantic air routes, and both Britain and the United States established air bases there during World War II. Madeira, consisting of two inhabited islands, Madeira and Porto Santo, and two groups of uninhabited islands, lies in the Atlantic about 535 miles southwest of Lisbon. Total area of the Madeiras is 314 square miles.

Mineral resources have not been fully developed, but wolfram, coal, iron ore, copper, manganese, iron pyrites, lead, tin, and other ores are found. The coal output in 1956 was 412,800 metric tons; iron ore (metal content 50%), 234,000 tons; tin concentrates, 1,320 tons; (1955) pyrites, 669,700 tons; lead, 1,400 tons; tungsten, 4,640 tons.

Portugal is one of the world's leading producers of cork. In 1956, 115,374 metric tons of cork, 9,577 tons of turpentine and 44,563 tons of resin were exported.

The fishing industry is a basic part of the national economy. Of special importance is the sardine industry centered at Setúbal. The total fishing catch in 1955 was 390,600 metric tons.

Portugal's climate is equable and temperate, but in the deep valleys where the mountains keep out the cool winds from the Atlantic, it is excessively hot in summer. Lisbon, Coimbra and Oporto all have mean temperatures of 60° to 61.5°. Heavy fogs are common along the coast. Rainfall is as high as 110 inches annually in the north and on the Serra da Estrela.

PORTUGUESE OVERSEAS TERRITORIES

	Area, sq. mi.	Population, est. 1955
AFRICA		
Angola	481,351	4,362,264
Cape Verde Islands	1,557	172,000
Mozambique	297,731	6,040,000
Portuguese Guinea	13,948	541,000
São Tomé and Príncipe	372	58,000
ASIA		
Macao	6	200,000
Portuguese India	1,538	644,000
Timor	7,332	478,688

The status of the Portuguese overseas territories is fixed by the Colonial Act of July 1930 included in the Constitution approved March 19, 1933, and revised in 1951. Each territory has a Governor or Governor General, appointed by the Council of Ministers for an initial 4-year term and responsible to the Minister of Overseas Territories at Lisbon. Each territory has financial and administrative autonomy.

ANGOLA (Portuguese West Africa)—Status: Overseas territory.
Capital: Loanda (pop. 1955: 189,590).

Governor General: José Agapito da Silva Carvalho.

Foreign trade (1956): exports, 3,289,026,-000 escudos (19% to the U. S.); imports, 3,162,216,000 escudos (45% from Portugal). Chief exports: coffee (49%), diamonds (10%), fish meal (6%).

Agricultural exports (1956): coffee, 89,880 metric tons; sisal, 37,283 tons; cotton, 5,908 tons; sugar, maize, palm kernels and oil, peanuts, rice.

Minerals: diamonds (1956: 743,930 carats), lignite, copper.

Forest products: beeswax, timber.

Manufactures: sugar, palm oil, whale oil, fish oil.

Angola stretches along the west African coast for about 1,000 miles from Belgian Congo to the Cunene River. Outside of a coastal plain varying in width from 30 to 100 miles, the area is part of the great African plateau. The Angola coast and the Congo River were explored by the Portuguese in 1482-85, and Loanda was founded in 1576. A legislative council with an elected majority was established in Angola in 1955.

Angola is primarily an agricultural country. Its varied altitude enables it to produce both tropical and temperate crops. Excellent grazing land exists in many parts of the colony. The chief ports are Loanda and Lobito. The great majority of the population are of Bantu-Negro stock, mixed in the Congo district with pure Negro.

Mean annual temperature at Loanda is 74.3°; the cool season lasts from June to September, the wet from October to May. Rainfall in the lower altitudes exceeds 40 inches annually.

CAPE VERDE ISLANDS—Status: Overseas territory.

Capital: Praia (population 9,980).

Governor: Manuel Marques Abrantes Amaral.

Foreign trade (1956): exports, 288,453,-000 escudos; imports, 308,242,000 escudos. Chief exports: ships stores (92%), preserved fish.

Agricultural products: coffee, millet, castor oil, oranges, hides.

This group of 14 volcanic islands lying off the west African coast was discovered in 1456 by the Venetian captain Alvise Cadamosto, in the service of Prince Henry the Navigator. The island of São Vicente is an important fueling station on the South American route. The vast majority of the inhabitants are mulattoes (101,498 in 1950) and Negroes (42,487)—descendants of slaves brought to the islands from Africa by early settlers. Public slavery was abolished in 1854, and private slavery in 1876.

Summer temperatures are high in the archipelago, ranging up to 90°. The rainy season lasts from August to October.

MOZAMBIQUE (Portuguese East Africa)—Status: Overseas territory.

Capital: Lourenço Marques (population 93,265).

Governor General: Gabriel Maurício Teixeira.

Foreign trade (1956): exports, 1,515,-400,000 escudos; imports, 2,736,322,000 escudos. Chief exports: cotton (20%), sugar (16%), copra, sisal, cashew nuts.

Agricultural exports (1956): cotton, 22,-677 metric tons; sugar, 98,176 tons; copra, 41,377 tons; sisal, 27,940 tons; cashew nuts, 37,974 tons; tea, 6,276 tons.

Minerals: gold, coal, graphite, mica.

Forest products: mangrove bark, timber.

Mozambique, stretching for about 1,430 miles along Africa's southeast coast, was discovered by Vasco da Gama in 1498, although the Arabs had penetrated into the area as early as the 10th century A.D. It was first colonized in 1505, and by 1510 the Portuguese were masters of all the former Arab sultanates on the east African coast. The boundaries with British Central and South Africa were delimited in 1891, and with Tanganyika Territory in 1886 and 1890. By the Treaty of Versailles, following World War I, Portugal was allotted the Kionga triangle, formerly part of German East Africa. One of the four provinces—Manica and Sofala (87,454 sq. mi.)—was held by the Mozambique Company until 1942 when its charter was not renewed.

Agriculture is the chief industry. There are many large plantations, some of which are partially mechanized. Stockraising is hampered by prevalence of the tsetse fly.

Ninety-nine per cent of the inhabitants are native Africans of the Bantu Tribes. In 1950 there were 48,213 Europeans, 12,630 Asiatics and 25,149 mulattoes. There were 1,652 miles of railway and 18,078 miles of road, mostly unimproved. The chief ports are Lourenço Marques and Beira, which is also the port for Rhodesia. The principal river is the Zambezi.

The cool season lasts from April to August, and the rainy season from December to March. On the central coast the mean annual temperature is about 85°.

PORTUGUESE GUINEA—Status: Overseas territory.

Capital: Bissau (population 18,309).

Governor: Silva Tavares.

Foreign trade (1956): exports, 203,208,-366 escudos; imports (1954), 171,922,324 escudos. Chief exports: peanuts (53%), coconuts.

Agricultural products: peanuts (exports 1956: 34,027 metric tons), coconuts, copra, rice, palm oil.

Forest products: timber, wax, rubber.

This area, lying on the west African coast and almost surrounded by French West Africa, was discovered in 1446 by the Portuguese Nuno Tristão and was separated from the colony of the Cape Verde Islands in 1879. It consists of a low-lying coastal region and 60 islands off the coast. The country is undeveloped economically,

and most of the natives are farmers. There are no railways, but navigable rivers totaling over 1,000 miles are important trade arteries; there are also about 1,820 miles of roads. About two-fifths of the natives are Moslem. On the coast, the temperature varies between 77° in January and 85° in May. The dry season extends from December to May.

SÃO TOMÉ AND PRÍNCIPE—Status: Overseas territory.

Capital: São Tomé (population 7,813).

Governor: António Pires Barata.

Foreign trade (1955): exports, 161,703,-231 escudos; imports, 125,221,828 escudos. Chief exports: cacao (70%), copra (11%), coconuts, coffee.

Agricultural products: cacao, coffee, coconuts, copra, palm oil.

These volcanic islands, lying in the Gulf of Guinea about 150-175 miles off the west African coast, were discovered by the Portuguese in 1471. Most of the early inhabitants were convicts and Jews from Portugal and slaves from Brazil and the mainland, but the bulk of the present inhabitants are Negro contract laborers from the mainland and Cape Verde engaged to work cacao plantations.

MACAO—Status: Overseas territory.

Capital: Macao (population 166,544).

Governor: Joaquim Marques Esparteiro.

Chief exports: fish, cement, preserves.

Manufactures: cement, preserves, fire-crackers, vegetable oils, metal products.

Macao comprises the peninsula of Macao and the two small islands of Taipa and Colôane on the south China coast, about 35 miles from Hong Kong. Established by the Portuguese in 1557, it is the oldest European outpost in the China trade, but Portugal's sovereign rights to the port were not recognized by China until 1887, and its boundaries are still not delimited. The port has been eclipsed in importance by Hong Kong, but it is still a busy distribution center, and also has an important fishing industry employing over 40,-000 people. It is notorious for its opium trade and gambling houses. Most of the population is Chinese.

PORTUGUESE INDIA—Status: Metropolitan province.

Capital: Panjim (Nova Gôa) (population 31,950).

Governor General: Paulo Bénard Guedes.

Foreign trade (1956): exports, 82,741,-364 rupias* (40% to Japan); imports, 114,051,886 rupias (19% from Britain). Chief exports: iron ore (71%), manganese ore (25%), cashew nuts.

Agricultural products: cashew nuts, coconuts, spices.

Minerals (exports 1956): iron ore, 2,046,-770 metric tons; manganese ore, 162,347 tons.

* 1 rupia = 5.97 escudos.

The area consists of Gôa and 3 islands on the Malabar coast of India; Damão and

the territories of Dadará and Nagar-Aveli, on the Gulf of Cambay; and Diu, with the continental territories of Goccola and Simbor, on the coast of Gujarat. Gôa, captured in 1510 by the Portuguese, later became capital of the whole Portuguese empire in the east. The native population is largely Hindu.

TIMOR—Status: Overseas territory.

Capital: Dili (population 7,000).

Governor: Cesar Maria de Serpa Rosa.

Foreign trade (1956): exports, 38,687,000 escudos (34% to the Netherlands); imports, 56,598,000 escudos (28% from Portugal). Chief exports: coffee (80%), rubber.

Agricultural exports (1956): coffee (1,120 metric tons), rubber (231 tons), copra (1,114 tons).

Forest products: sandalwood, wax.

Portuguese Timor consists of the eastern half of the island of Timor in the Malay Archipelago, with the territory of Ambeno and two neighboring islands. It was first settled by the Portuguese early in the 16th century. In 1859 the island was divided between Portugal and the Netherlands; later boundary adjustments were made in 1904. Fishing and copra manufacture are important; trade is mostly in the hands of Chinese, Malaysians and Arabs. Europeans numbered 568 in 1950. Timor was occupied by Dutch and Australian troops in Dec. 1941, and by the Japanese in Feb. 1942.

Rumania (People's Republic)

(Republica Populara Româna)

Area: 91,654 square miles.

Population (census 1956)*: 17,489,794 (1948: Rumanian, 85.7%; Magyar, 9.4%; German, 2.2%; Jews, 0.9%; others [Turkish, Ruthenian, Bulgarian, Gypsy, Ukrainian] 1.8%).

Density per square mile: 190.8.*

Chairman of Presidium: Petru Groza.

Premier: Chivu Stoica.

Principal cities (census 1956)*: Bucharest, 1,236,906 (capital); Cluj, 154,752 (Transylvanian industrial center); Timisoara, 142,251 (western commercial center); Stalin (Brasov), 123,882 (industrial center); Ploesti, 114,560 (oil).

Monetary unit: Leu.

Languages: Rumanian, Hungarian, German, Turkish.

Religions (est. 1947): Eastern Orthodox, 81%; Greek Catholic, 9%; Roman Catholic, 7%; others, 3%.

* Preliminary figures.

HISTORY. In World War I, Rumania joined the Allies and won enough land at the peace conference to double its size. In World War II, Rumania joined the Axis and lost about half its earlier gains. Its present size is about that of Oregon. Politically, it is dominated by the Soviets.

Most of Rumania was the Roman province of Dacia from about A.D. 100 to 275. From the 6th to the 12th centuries, wave after wave of barbarian conquerors—

Vlachs, Bulgars and others—passed over the area. Of the two regions which eventually became Rumania, Walachia was taken by the Turks in 1411, and Moldavia in the 16th century, but both retained semi-autonomy. After the Russo-Turkish War, they went under *de facto* Russian protection in 1774.

The Treaty of Paris following the Crimean War nominally united the two provinces in 1858, and Alexander Cuza was elected Prince of Moldavia and Walachia. In 1866 he was forced to abdicate and was succeeded by Prince Carol of Hohenzollern-Sigmaringen. The Treaty of Berlin recognized Rumania's complete independence in 1878, and in 1881 the principality was elevated to a kingdom. Rumania's spoils from the Second Balkan War in 1913 included the Black Sea province of Dobruja. The following year King Carol I was succeeded by his nephew, Ferdinand. The gains of World War I, making Rumania the largest Balkan state, included Bessarabia, northern Transylvania and Bukovina. The Banat, a Hungarian area, was divided with Yugoslavia.

In 1926 Crown Prince Carol renounced his rights to the throne, and when King Ferdinand died on July 20, 1927, Carol's son, Michael (Mihai) became King under a regency. However, Carol returned from exile in 1930, was crowned King Carol II, and gradually became a powerful political force in the country. On Feb. 10, 1938, he abolished the democratic Constitution of 1923. On June 21, 1940, the country was reorganized along Fascist lines, and the Fascist Iron Guard became the nucleus of the new totalitarian party. On June 27, the Soviet Union occupied Bessarabia and northern Bukovina. By the Axis-dictated Vienna Award of Aug. 30, 1940, two-fifths of Transylvania went to Hungary. On Sept. 4, the King dissolved Parliament and granted the new Premier, Ion Antonescu, full power, after which he abdicated and then went into exile. The first official act of his son, Michael I, was to confirm Antonescu in his status as head of the state and Premier. Rumania subsequently signed the Axis Pact on Nov. 23, 1940, and the following June joined in Germany's attack on the U.S.S.R., reoccupying Bessarabia. Following the invasion of Rumania by the Red Army in Aug. 1944, King Michael led a *coup d'état* which ousted the Antonescu government. An armistice with the U.S.S.R. was signed Sept. 12 in Moscow.

Elections held Nov. 19, 1946, resulted in a victory for the Communist-dominated government bloc. Michael abdicated on Dec. 30, 1947, and thereafter the nation was declared a "people's republic." The Communist-controlled People's Democratic Front was unopposed in elections held

Nov. 30, 1952, and Feb. 3, 1957. Rumania was admitted to the U. N. in 1955.

GOVERNMENT. The 1952 Constitution is based on that of the U.S.S.R. The supreme organ of state authority is the Grand National Assembly of 437 members elected for 4 years by all citizens over 18. It elects a Presidium to act when it is not in session and also elects the Council of Ministers, headed by the Premier, the supreme executive and administrative organ.

PEACE TREATY OF 1947. The Paris peace treaty ratified on Sept. 15, 1947, confirmed the *de facto* cession to the Soviet Union of Bessarabia and northern Bukovina, the return to Rumania from Hungary of northern Transylvania (thus annulling the Vienna Award of 1940) and the cession of southern Dobruja to Bulgaria. In addition, Rumania was required to pay reparations in kind in the amount of \$300,000,000 (reduced to \$225,000,000 by the U.S.S.R. in 1948) to the Soviet Union over a period of eight years. She also was to make compensation in lei to the amount of two-thirds of the original value of Allied property damaged or destroyed in Rumania.

The treaty limited the strength of the Rumanian armed forces as follows: army 125,000 men, navy 5,000 men and tonnage of 15,000, air force 8,000 men and 150 planes. The armed forces were soon reorganized and re-equipped with Soviet assistance.

Despite treaty limitations, the total of Rumanian armed-forces personnel was estimated at more than 450,000, including security troops, by the end of 1954; a 10% reduction was announced in 1955 and a further cut of about 40,000 in 1956. The navy in Dec. 1956 had 4 old destroyers, 3 submarines and other smaller craft.

SOCIAL AND ECONOMIC CONDITIONS. Education is free and compulsory. Illiteracy was 23.1% in 1948. In 1955 there were 17,000 elementary schools with 2,400,000 pupils and 500 secondary schools with 150,000 pupils. There are five universities—at Bucharest, Jassy, Cluj (2) and Timisoara.

Rumania is predominantly agricultural, with about 80 per cent of the population engaged on the soil. In wheat, rye and other grains, it is one of the richest countries of southeastern Europe. The largest acreage is usually devoted to corn and wheat. Other crops are flax, hemp, fruit, vegetables, potatoes, sugar beets, sunflower seeds, tobacco and grapes. Stockraising is also important.

Agrarian reform measures effected in 1945 provided for the distribution of estates over fifty hectares (123.6 acres) in lots of 12½ hectares to each peasant.

Industrialization made considerable progress under a 5-year plan covering the

years 1951-55 which emphasized the iron, steel, metal, machinery and other heavy industries. The Soviet half-share in Soviet-Rumanian joint companies, which control the major industries, was sold to Rumania in 1954. Industries directly connected with agriculture, such as flour milling, distilling and brewing, are still of basic importance. Probably the most important industries are food processing, textiles, metals, chemicals, wood and paper. All but small business enterprises are nationalized.

Foreign trade is under complete government control. According to the U. N. Economic Commission for Europe, total trade (imports and exports) amounted to \$670,000,000 in 1954, including \$560,000,000 with countries of the Communist group. Principal exports are petroleum products, cereals and cereal products, wood and wood products. Leading imports are iron and manufactures, machinery and motors, vegetable fibers and products.

The Danube, flowing along the southern border for more than 200 miles, is a highly important commercial artery. Transshipment between seagoing vessels and river barges is made at Galati and Braila. The principle of freedom of navigation on the Danube for all nations was recognized in the 1947 peace treaty. The principal seaport is Constanta. Railway mileage in 1949 was 7,363. Highway mileage in 1955 was 61,794.

The 1956 budget provided for revenue of 45,430,600,000 lei and expenditure of 44,430,600,000 lei, including 26,144,100,000 lei invested in the national economy.

NATURAL FEATURES AND RESOURCES; CLIMATE. The Carpathian Mountains divide Rumania's upper half from north to south and connect near the center of the country with the Transylvanian Alps, running east and west.

North and west of these ranges lies the Transylvanian plateau, and to the south and east are the plains of Moldavia and Walachia. In its last 190 miles, the Danube River flows through Rumania only. It enters the Black Sea in northern Dobruja, just south of the border of the Soviet Union.

By far the most valuable of Rumanian minerals is oil, produced chiefly in the Ploesti region about 35 miles north of Bucharest. Production in 1955 was estimated at 10,575,000 metric tons (about 79,300,000 barrels).

Natural gas from Transylvania is the second most important mineral, coming to 3,900,000,000 cubic meters in 1955. Other important minerals are iron ore (1955: about 700,000 tons); lignite (1955: 6,200,000 tons), copper, gold and silver. Uranium deposits have been reported.

The Moldavian-Walachian region has hot summers and extreme frosts and blizzards

in winter. Variations are less extreme in Transylvania and the Banat. Bucharest's average summer temperature is 72°; winter 27°. In some winters the Danube is ice-bound for as long as three months. Rainfall, heaviest in summer, averages 15-20 inches annually.

El Salvador (Republic)

(República de El Salvador)

Area: 8,260 square miles.*

Population (est. July 1, 1956): 2,268,464 (mestizo, 78%; Indian, 11%; white, 11%).

Density per square mile: 274.6.

President: José María Lemus.

Principal cities (est. 1953): San Salvador, 180,713 (capital); Santa Ana, 56,952 (coffee); San Miguel, 28,730 (coffee, henequen).

Monetary unit: Colón.

Language: Spanish.

Religion: Roman Catholic.

* Land area: 8,165 square miles.

HISTORY AND GOVERNMENT. El Salvador is the smallest, most densely populated of Central American nations, and the only one without an Atlantic coast line.

Pedro de Alvarado, a lieutenant of Cortez, conquered El Salvador in 1525. The area was administered as part of Guatemala until the general Central American revolution against Spain in 1821. El Salvador struck out as an independent republic in 1839 after the dissolution of the Central American Union. Its story since then has been largely one of revolution.

In Jan. 1931, the first free election in 20 years brought in Arturo Araujo as President. He was overthrown before the year was over. General Maximiliano Hernández Martínez, his successor, remained in power until May 1944, when a general strike forced his resignation. The next regime, also militarist-led, lasted only five months, and was succeeded March 1, 1945, by a regime headed by Salvador Castañeda Castro, who was ousted Dec. 14, 1948, by a revolutionary junta. Major Oscar Osorio, one of the junta's members, was named President in the March 1950 elections. Col. José María Lemus was elected to succeed him in the March 1956 elections.

The Constitution provides for a President, popularly elected for six years and normally ineligible to succeed himself; also, a one-house legislature of 54 members. The military forces include an army limited to 3,000, a militia, a national guard and a small air force.

SOCIAL AND ECONOMIC CONDITIONS. Education is free and compulsory; both public and private schools are state-controlled. In 1950, 57.8% of those 10 years of age and over could not read and write. Primary schools in 1954 numbered 2,032 with 210,125 pupils; secondary schools numbered 126 with 12,376 stu-

dents. The national university had an enrollment of 1,315 students in 8 faculties.

Mestizos (mixed white and Indian) are the predominant racial group. There are no tribal Indians.

El Salvador is one of the most intensively cultivated countries in Latin America. Coffee, which accounts for 85 per cent of the total exports (1956-57 production: 1,472,000 bags of 132 lb. each) is controlled in volume by a commission of officials and planters. Cotton is second in importance. Corn, sugar cane, beans, rice, tobacco, cacao, indigo, millet and sisal fiber are other products.

El Salvador's largest national enterprise, the Lempa river hydroelectric project, began partial operation in 1953.

Exports in 1956 totaled 281,827,074 colones; imports, 261,770,059 colones. The U. S. took 45% of the exports and supplied 53% of the imports.

The two railways have 385 miles of track. Roads (1954) included paved, 375 miles; other all-weather, 375 miles; unimproved, 1,200 miles.

NATURAL FEATURES AND RESOURCES; CLIMATE. Most of El Salvador is a fertile volcanic plateau about 2,000 feet high. There are several volcanoes, some still active, and many lovely crater lakes.

Gold, silver, coal, copper, iron, zinc, mercury and sulfur are the nation's chief minerals. Gold production in 1956 totaled 2,983 troy oz.; silver, 161,475 oz.

Forest resources, much smaller than in other Central American states, include dyewood, mahogany, cedar and walnut. El Salvador is a leading source of balsam.

Mountain ranges along the borders of Guatemala and Honduras give the highlands an almost temperate climate, but the lowlands are often hot and sultry. Temperatures at San Salvador range from about 59° (average daily low) in January to 85° (average daily high) in December; these are the two coolest months. The rainy season lasts from May to October.

San Marino (Republic)

Area: 38 square miles.

Population (est. 1955): 14,000 (mostly Italian).

Density per square mile: 368.4.

Executive: two Regents selected every six months by the Grand Council.

Principal town: San Marino (est. pop. 2,000) (capital).

Monetary unit: Lira.

Language: Italian.

Religion: Roman Catholic.

San Marino, the oldest and smallest republic in the world, is one-tenth the size of New York City. It is entirely sur-

rounded by Italy, in the Apennines near Rimini. According to tradition, San Marino was founded about A.D. 350 and had good luck for centuries in staying out of the interminable wars and feuds on the Italian peninsula.

San Marino hires its police and judges from Italy. It no longer confers titles for a consideration, but it does derive much revenue from the exporting of its postage stamps, which are changed often to keep philatelists buying. Other exports are barley, wine and cattle, as well as building stone from Mount Titano.

Executive power is exercised by Regents, two of whom are appointed every six months from the popularly-elected Grand Council. There were 18 primary schools and 3 secondary schools in 1955.

Saudi Arabia (Kingdom)

Area: c. 617,760 square miles.

Population (est. 1952): 7,000,000.

Density per square mile: c. 11.3.

King: Sa'ud ibn Abd al Aziz al Sa'ud.

Prime Minister: Emir Faisal.

Principal cities (est. 1954): Mecca, 150,000 (joint capital, religious center); Jidda, 100,000 (chief port); Hufuf, 100,000 (commercial center); Riyadh, 80,000 (joint capital).

Monetary unit: Riyal.

Language: Arabic.

Religion: Moslem.

The kingdom of Saudi Arabia, which occupies most of the Arabian peninsula, is almost entirely the creation of King Ibn Sa'ud (1882-1953). Its earlier history is that of Arabia. Descendant of earlier Wahhabi rulers, Ibn Sa'ud seized the emirate of Riyadh in 1901, at the age of 20, and soon set himself up as the leader of the Arab nationalist movement. By 1914 he had reconquered all of Nejd and Hasa. Remaining neutral during World War I, he resumed his drive after the war and through a series of local military campaigns was able to proclaim himself King of Hejaz and Nejd and dependencies in 1927. The united kingdom of Saudi Arabia was proclaimed in 1932. Saudi Arabia remained neutral until nearly the end of World War II but was one of the original members of the U. N. and joined the Arab League in 1945. King Ibn Sa'ud died Nov. 9, 1953, and was succeeded by Sa'ud (born 1905), the eldest of his many sons.

Saudi Arabia is a nearly absolute monarchy. A Council of Ministers headed by the Prime Minister was formed in Oct. 1953. Hejaz and Nejd are under separate administrations. Tribal organizations are influential. There is a small army.

The majority of the inhabitants are Bedouin—nomads following their flocks over the desert. The population is pre-

dominantly Sunni Moslem, and the religious law of Islam is the common law of the land. Mecca and Medina are the leading religious centers of Islam and the annual influx of pilgrims to those cities is the most important commercial activity outside the oil industry.

Saudi Arabia's desert climate restricts agriculture to the highlands of Asir and scattered oases. Dates are the staple crop; grain, fruits and vegetables are also grown. Camels, sheep and goats are raised and some animal products, such as hides, wool and ghee (clarified butter), are exported.

Most transportation continues to be by sea and by camel caravan, although roads and motor tracks now connect the major centers. A railroad from Dammam to Riyadh (345 mi.), completed in 1951, is being extended across the peninsula to Medina and Jidda.

The kingdom's budget for the fiscal year 1954-55 estimated revenue at U. S. \$305,940,000 and expenditure at \$361,330,000; the deficit was to be met from the general reserve fund. Direct payments from oil concessions in the form of royalties and income taxes were estimated at \$257,700,000 in 1954-55.

Oil, discovered in 1936 in the province of Al Hasa along the Persian Gulf, is produced by the U. S.-owned Arabian-American Oil Co. (Aramco). The main production centers are Dharan, Abqaiq, Qatif and Ain Dar. Production has skyrocketed since World War II. The company's expenditures and payroll are important invisible exports and oil revenues have greatly strengthened the financial position of the kingdom, which receives one-half the company's profits. The oilfields are connected by pipeline with the Mediterranean port of Sidon, Lebanon. In 1956 production totaled 360,923,384 barrels; the crude run at the Ras Tanura refinery was 72,662,690 barrels.

Siam. See Thailand

Spain (Nominal Monarchy)

(España)

Area: 194,945 square miles.

Population (est. Dec. 31, 1956): 29,130,499 (Spanish, Basque, Catalan).

Density per square mile: 149.4.

Chief of State: Francisco Franco y Bahamonde.

Principal cities (est. Dec. 31, 1956): Madrid, 1,843,705 (capital); Barcelona, 1,403,028 (chief port, textiles); Valencia, 511,440 (silk, oranges); Seville, 405,853 (wines, iron ore); Málaga, 277,824 (seaport); Saragossa, 274,222 (rail center).

Monetary unit: Peseta.

Languages: Spanish, Basque, Catalan.

Religion: Roman Catholic.

HISTORY. Spain, twice the size of Oregon, was once one of the world's great powers.

From 201 B.C. to A.D. 406, it was part of the Roman Empire. Then the Goths and the Vandals formed a powerful kingdom, which was partially conquered in the 8th century by the Moors from Africa. The last Moorish stronghold, the kingdom of Granada, fell to the forces of King Ferdinand and Queen Isabella, who were trying to unify Spain, in 1492. In the same year, the Spanish-financed explorer Christopher Columbus was discovering the new world for the Spanish Crown.

Charles V (1516-55) became King of Spain and also Holy Roman Emperor. Under his son, Philip II, Spain reached the peak of its power, but the beginning of decline set in with Britain's defeat of the "Invincible" Armada in 1588.

The line of Spanish Hapsburgs ended in 1700, and the War of the Spanish Succession followed. By the Treaty of Utrecht (1713) Spain was forced to accept a Bourbon King, the Duke of Anjou, and lost Gibraltar and all holdings in the Netherlands and southern Italy. Then, while the Spaniards were resisting Napoleon's efforts to establish a Bonaparte line in Spain, most of their colonies in America revolted and became independent. The loss of Cuba, Puerto Rico and the Philippines in the Spanish-American War of 1898 left Spain only scattered possessions in Africa. Neutrality was maintained in World War I.

From 1923 to 1930, Spain was a military dictatorship under General Miguel Primo de Rivera. A wave of republicanism in 1931 forced the abdication of King Alfonso XIII, and a new Constitution was drawn declaring Spain to be a workers' republic. Several revolts, strikes and shifts of government kept Spain in political chaos, and on July 18, 1936, the army revolt led by General Francisco Franco burst into civil war. While Hitler and Mussolini helped Franco, Russia helped the Loyalist side. The last Loyalist forces surrendered on March 29, 1939. Spain became a dictatorship under Franco and signed the anti-Comintern pact in 1939.

While Franco shied away from the risk of becoming a belligerent in World War II, he was pro-Axis in sympathy, helped the Axis with supplies, information and services to German U-boats, and even sent the Spanish Blue Division to help fight the Russians.

On Sept. 26, 1953, the U. S. and Spain signed three agreements providing for the use and development by U. S. forces of certain Spanish air and naval bases in return for U. S. military and economic aid.

GOVERNMENT. Franco is head of the state, national chief of the Falange party, Prime Minister and *Caudillo* (leader) of the empire. Practically, the country is

ruled by the Cabinet (appointed by Franco), the National Council of the Falange party and, to a lesser extent, the Cortés (parliament). The principal function of the Cortés is the planning and formulation of laws without prejudice to Franco's veto power. Cabinet ministers, party officials, civil governors, university heads, and the presidents of learned bodies become members of the Cortés ex-officio. There is no provision for the introduction of legislation by any of the members.

In a referendum held July 6, 1947, the Spanish people approved a Franco-drafted succession law declaring Spain a monarchy again. Franco, however, is to continue as Chief of State and upon his death or incapacity the government and a Council of the Realm constituted by the law are to nominate as King "that person of royal blood who is most qualified by right," subject to the approval of the Cortés. The law reserves to Franco the right to nominate his own successor, subject also to the Cortés approval by two-thirds vote.

DEFENSE. Franco is commander in chief of the army, navy and air force, each administered by a cabinet minister responsible to him. Military service is compulsory for two years. The standing army is estimated at 350,000 men. The navy in Dec. 1956 had 5 cruisers, 18 destroyers, 6 submarines, 31 frigates and escort vessels and many smaller vessels.

SOCIAL AND ECONOMIC CONDITIONS.

Education. Primary education is compulsory and free; religious instruction is permitted. In 1950, 14.24% of those 10 years of age and over could not read and write. In 1952-53 there were 65,411 primary schools with 2,887,090 pupils, 1,050 secondary schools with 260,000 pupils and 12 universities (1953) with 58,143 students.

Agriculture. Spain is predominantly agricultural, although there are extensive non-arable areas. The principal land uses, apart from forest, pasture and forage crops, are the production of grain, potatoes, pulse, sugar beets, oranges, grapes and olives. Since the civil war Spain has not recovered balance in production and consumption of foodstuffs. Normally, Spain produces exportable quantities of oranges, lemons, almonds, filberts, raisins and other subtropical commodities. Wine production in 1956 was about 488,400,000 U. S. gallons (1951-55 average: 477,300,000 gallons); olive oil production was 395,000 metric tons.

Livestock, also important, included in 1954, 4,500,000 cattle, 20,000,000 sheep and 5,000,000 hogs. Wool production in 1956 was 21,000 metric tons, clean basis.

PRINCIPAL CROPS

(thousands of metric tons)

	1954	1955	1956*
Wheat	4,798	4,003	4,207
Barley	2,205	1,718	1,550
Rye	526	493	510
Oats	526	506	450
Maize	751	616	710

* Provisional.

TRADE. Statistics of foreign trade are as follows, in millions of U. S. dollars:

	1954	1955	1956
Exports	464	446	441
Imports	614	617	767

Leading customers in 1955 included Britain (16%), Germany (15%), the U. S. (10%) and France (8%); leading suppliers, the U. S. (19%), France (11%), Britain (11%) and Germany (10%). Leading exports in 1956 were iron ore (10%), olive oil (6%) and oranges (6%). Principal imports were raw cotton, chemical products (especially fertilizer), petroleum and vehicles.

Industry. The textile industry, concentrated in Catalonia and normally employing over 300,000 workers, leads all others. The paper and chemical industries are also important. Pig iron production in 1956 was 913,034 metric tons; steel production, 1,242,617 tons. On March 31, 1957, 88 vessels of 207,927 gross tons were under construction.

Communications. The merchant fleet, which suffered severely during the civil war and World War II, comprised 1,246 vessels (100 tons and over) of 1,437,805 gross tons on June 30, 1956, according to *Lloyd's Register*. Highways total about 80,000 miles and railways about 11,200.

Finance. Recent data (budget estimates) are as follows, in millions of pesetas:

	1952-53*	1954-55*	1956-57*
Revenue	22,208	26,074	33,834
Expenditure	22,477	26,340	35,833

* Data are for each year in indicated biennial budgetary period.

The public debt on Dec. 31, 1955, was 97,963,200,000 pesetas, including treasury bonds and guaranteed obligations.

NATURAL FEATURES AND RESOURCES; CLIMATE. Spain, less than ten miles from Africa at the closest point, and separated from France by the Pyrenees, is generally a broad plateau sloping to south and east and crossed by a series of mountain ranges and river valleys. Most of the coast line is steep and rocky.

Minerals. Spain's mineral wealth, second to agriculture in the national economy, yields millions of tons of ore. Following are production figures for 1956, in metric tons: coal, 12,851,223; lignite, 1,934,735; iron ore (metal content 50%), 4,400,000; potash ore, 1,444,238; lead ore, 94,009; zinc ore, 155,690; mercury (1954),

1,487. Spain also produces copper, gold, magnesite, sulfur, tungsten, phosphates, silver and, reportedly, uranium.

Forests and Fisheries. Spanish forests yield lumber, pine resins, cork and esparto. Some 100,000 persons work in the fishing, canning and related industries. The 1956 catch, principally cod, tunny and sardines, was 606,858 metric tons.

Climate. Most of Spain's weather is extreme. Madrid, for example, reaches a high of 110° and a low of 10°. In the southeast, the protection of the Sierra Nevadas makes the climate subtropical. The northeast, with climate much like that of the British Isles, is the only region with normal rainfall.

OUTLYING ISLANDS. Off Spain's east coast in the Mediterranean are the Balearic Islands, which total 1,936 square miles. The largest is Majorca (1,405 sq. mi.). Sixty miles west of Africa are the Canary Islands (2,804 sq. mi.).

SPANISH COLONIAL POSSESSIONS

Country	Area, sq. mi.	Census, 1950
Morocco		
Ifni	579	38,295
Ceuta, Melilla, Alhucemas, Chafarinas and Peñon de Velez	82	141,302
Spanish Sahara		
Rio de Oro	71,043	1,304
Saguia el Hamra	31,660	6,445
Spanish Guinea	10,831	198,663

Sudan, The (Republic)

Area: 967,500 square miles.

Population (census 1955-56)*: 10,209,703.

Density per square mile: 10.6.*

Chief executive: five-member Council of State.

Prime minister: Abdullah Khalil.

Principal cities (census 1955-56)*: Omdurman, 113,686 (commercial center); Khartoum, 92,829 (capital); El Obeid, 52,382 (gum arabic); Wad Medani, 48,131 (cotton, livestock); Port Sudan, 47,650 (chief port).

Monetary unit: Sudanese pound.

Languages: English, Arabic, Nilotic and Negro tribal dialects.

Religions: Moslem (Sunni), pagan, Christian.

* Provisional figures.

HISTORY. The early history of the Sudan (known as the Anglo-Egyptian Sudan between 1898 and 1955) is connected with that of Nubia, where a powerful local kingdom was formed in Roman times with its capital at Dongola. After conversion to Christianity in the 6th century A.D., it joined with Ethiopia and resisted Mohammedanization until the 14th century. Thereafter the area was broken up into many small states until 1820-22 when it was conquered by Mohammed Ali, Pasha

of Egypt. Egyptian forces were evacuated during the Mahdist revolt (1881-98), but the Sudan was reconquered by the Anglo-Egyptian expeditions of 1896-98 and in 1899 became an Anglo-Egyptian condominium, which was reaffirmed by the Anglo-Egyptian treaty of 1936.

Egypt and Britain agreed in Feb. 1953 to grant self-government to the Sudan under an appointed Governor General. Under the self-government statute of March 31, 1953, an all-Sudanese Parliament was elected in Nov.-Dec. 1953 and an all-Sudanese government was formed, headed by Ismail el-Azhari as Prime Minister. Under the agreement the Sudanese people were to determine their political status at the end of a 3-year period following the elections, but in Dec. 1955 the Parliament declared the independence of the Sudan, which, with the approval of Britain and Egypt, was proclaimed on Jan. 1, 1956. El-Azhari was replaced as Prime Minister by Abdullah Khalil on July 5.

GOVERNMENT. Pending the election of a Constituent Assembly and the adoption of a definitive Constitution, the powers of chief of state are exercised by a five-member Council of State. The government is administered by the Prime Minister and his Cabinet. A bicameral Parliament has a Senate of 50 members and a House of Representatives of 97 elected members.

SOCIAL AND ECONOMIC CONDITIONS. The northern part of the country is peopled by Arabic-speaking Moslems, while in the backward south Negroid pagan tribes predominate.

Long-staple cotton, the chief export crop, is grown under irrigation in the Kassala and Tokar areas of the north and in narrow strips along the main Nile. Production was 118,000 metric tons in 1956-57. Durra, peanuts, corn and oilseeds are grown elsewhere. Livestock raising is the occupation of the majority of the population; in 1955 there were 2,000,000 camels, 5,500,000 cattle and 6,000,000 sheep.

Recent foreign trade data are as follows, in millions of Sudanese pounds:

	1954	1955	1956
Exports	40.5	51.3	66.8
Imports	48.5	48.8	45.2

Leading exports in 1956 were cotton (62%), gum arabic (8%), cottonseed (7%) and peanuts (6%). Leading customers were Britain (33%), India (13%) and Egypt (11%); leading suppliers, Britain (21%), Egypt (14%) and India (12%).

There are two trunk railways, one connecting Sudan with Egypt and the other affording access to the chief port, Port Sudan, on the Red Sea. The Nile system is the principal transportation artery.

NATURAL FEATURES AND RESOURCES; CLIMATE. About one-fourth the size of Europe, the Sudan extends from north to south about 1,200 miles and west to east about 1,000 miles. The northern region is a continuation of the Libyan Desert. The southern region is fertile, abundantly watered and, in places, heavily forested. It is traversed from north to south by the Nile, all of whose great tributaries are partly or entirely within its borders. The highest elevation is a mountain range parallel to the Red Sea, with heights of 4,000 to over 7,000 feet.

Salt is produced at Port Sudan, and gold deposits are worked at Gebel, near the Red Sea. Most of the world's gum arabic comes from the semiarid Kordofan area of the west (production 1956: 41,809 metric tons). The southern forests are rich in fibers and tannins.

The whole country lies within the tropics and has an exceedingly hot climate. At Khartoum the mean annual temperature is 80° and rainfall 5 inches.

Sweden (Kingdom)

(Sverige)

Area: 173,564 square miles.

Population (est. Dec. 31, 1956): 7,341,122 (practically all Swedish).

Density per square mile: 42.3.

Sovereign: King Gustavus VI Adolphus.

Prime Minister: Tage Frihof Erlander.

Principal cities (est. Dec. 31, 1956): Stockholm, 794,113 (capital); Göteborg, 387,061 (chief port, shipbuilding); Malmö, 213,260 (seaport); Norrköping, 89,226 (textiles); Hålsingborg, 74,947 (seaport).

Monetary unit: Krona.

Language: Swedish.

Religions: Swedish Lutheran, 99%; others, 1%.

HISTORY. Although ancestors of today's Swedes lived in the area as long as 5,000 years ago, little is known of Sweden before the 10th century. About 1000, King Olaf Skötkonung had united Sweden into a strong nation and established Christianity. In 1397 Sweden was united with Norway and Denmark under the Union of Kalmar. After the murder of several prominent Swedes by Christian II of Denmark in 1520, Sweden revolted under the leadership of Gustavus Vasa. Gustavus, elected King in 1523, founded the modern Swedish state and was the first European monarch to break relations with the Pope.

By the Treaty of Westphalia (1648) which concluded the Thirty Years' War (during which Gustavus Adolphus scored a number of brilliant military successes), Sweden acquired important German areas, including large portions of Pomerania. In 1700, Poland, Denmark and Russia united

against Sweden. When peace was finally concluded in 1721, Sweden gave up Livonia, Estonia, Ingria and parts of Finland. Sweden participated in the coalition against Napoleon (1805-07) but in 1809 Finland was lost to Russia. Following the ouster of King Gustavus IV in 1809, a constitutional law still in effect was adopted, after which Charles XIII, uncle of Gustavus IV, was elected King. Since Charles XIII was childless, one of Napoleon's marshals, Jean Bernadotte, was elected Crown Prince and took over effective control of the government, succeeding to the throne in 1818 as Charles XIV. By the Treaty of Kiel (1814), Sweden acquired Norway from Denmark in return for Pomerania. The union with Norway was peacefully dissolved in 1905.

Neutrality was maintained through both World Wars. Sweden did not join the North Atlantic Pact in 1949.

SOVEREIGN. Gustavus VI Adolphus, born Nov. 11, 1882, married (1) 1905, Princess Margaret Victoria (1882-1920); (2) 1923, Princess Louise Mountbatten (born 1889). To his first marriage was born Prince Gustavus Adolphus (born Apr. 22, 1906, killed in air crash Jan. 26, 1947), who was married in 1932 to Sibylla, Princess of Saxe-Coburg-Gotha; their offspring include a son, Carl Gustavus, the heir apparent, born April 30, 1946, and four daughters. Gustavus VI became King Oct. 30, 1950, on the death of his father, Gustavus V, who had reigned since 1907.

GOVERNMENT AND DEFENSE. Executive and judicial authority is vested in the King alone, but his resolutions must be taken in the presence of the Council of State (cabinet), headed by the Prime Minister; the Council is appointed by the King but is responsible to the Riksdag (parliament).

The Riksdag has a First Chamber of 150 members elected indirectly by the provincial, and in the large cities by the municipal, councils for eight years, one-eighth being renewed each year. The Second Chamber of 231 members is directly elected by popular vote for four years. There is universal suffrage for men and women over 21. The King can initiate legislation and can veto all bills except those relating to taxation.

Standings in the Second Chamber (elections of Sept. 16, 1956): Social Democrat 106, Liberal 58, Conservative 42, Agrarian 19, Communist 6.

Defense. Military service is compulsory from the ages of 18 to 47; the initial training period is 10 months. The King is commander in chief of all the armed forces. The army is well-equipped with the latest type weapons, many of them Swedish. The navy in June 1957 had 3 cruisers, 12 fleet destroyers, 15 escort vessels, 48 motor

torpedo boats, 21 submarines, 2 minelayers and numerous smaller craft.

The air force has modern jet aircraft, nearly all designed and built in Sweden.

SOCIAL AND ECONOMIC CONDITIONS. *Education.* Public elementary education has been free and compulsory since 1842. Illiteracy is practically unknown. In 1956, there were 833,000 pupils in regular elementary schools as well as 190,000 pupils in regular secondary schools. The three universities—Uppsala, Lund and Göteborg—and two other schools of university grade had 16,935 students in 1956. The state also provides a large number of special vocational and continuation schools. The national church is the Swedish Lutheran Church, of which the King is supreme administrator.

Agriculture. Milk, butter, meat, grain, potatoes and sugar beets are products of the broad fertile plains of the south; the north is limited to cattle raising and dairy farming. Recent production data are as follows, in thousands of metric tons:

	1954	1955	1956
Wheat	1,021	716	945
Rye	301	170	223
Barley	361	408	618
Oats	863	597	1,148
Mixed grain	657	528	715
Sugar beets	1,848	1,663	1,740
Potatoes	1,429	1,285	2,044

The 1956 livestock estimates showed 284,000 horses, 2,434,000 cattle, 157,000 sheep and 1,573,000 hogs. Butter production in 1956 was 83,000 metric tons; cheese, 50,600 tons; milk, 3,935,000 tons.

Industry. The highly specialized machine industry produces separators, motors, electrical machines and apparatus, agricultural machinery, ball bearings, telephone equipment and harbor works. Pig iron production in 1956 totaled 1,328,000 metric tons; raw steel, 2,404,000 tons.

There are also large woolen, glass and porcelain industries. Shipyards build for both Swedish and foreign fleets. In 1956, 80 vessels of 489,570 gross tons were launched. The timber and woodworking industries are extensive.

Trade. Statistics of foreign trade are as follows, in millions of kronor:

	1954	1955	1956
Exports	8,196	8,933	10,067
Imports	9,192	10,305	11,434

Leading exports in 1956 were wood pulp (17%), machinery and apparatus (13%), timber (12%) and iron ore (10%). Leading customers were Britain (18%), western Germany (14%), Norway (8%) and the Netherlands (6%). Leading suppliers were western Germany (22%), Britain (14%), the U. S. (10%) and Norway (4%). The principal imports included machinery,

petroleum and products, textiles and clothing and automobiles.

Communications. On June 30, 1956, the merchant marine comprised 1,223 ships (100 tons and over) of 2,922,092 gross tons, largely efficient motor vessels. The highly developed railway network totaled 10,100 miles in 1956 and there were about 57,209 miles of highway, mostly improved. By means of ferry steamers, Swedish state railways are connected directly with both Germany and Denmark.

Finance. Recent data on current account are as follows, in millions of kroner:

	1955-56	1956-57	1957-58*
Revenue	9,909	11,309	11,487
Expenditure	9,234	10,603	10,277

* Budget estimate.

The public debt was 16,966,000,000 kr. on Dec. 31, 1956.

NATURAL FEATURES AND RESOURCES; CLIMATE. Sweden, with extreme length of about 980 miles and breadth of 310 miles, slopes eastward and southward from its peak elevation in the Kjölen mountains along the Norwegian border. In the north are mountains and many lakes. To the south and east are central lowlands, and south of them are fertile areas of forest, valley and plain. Along Sweden's rocky coast, chopped up extensively by bays and inlets, are many islands, the largest of which are Gotland (1,212 sq. mi.) and Öland (518 sq. mi.). The country is landlocked to the north.

Minerals. Sweden's iron ore deposits (metal content 60%) are among the world's richest. Those in central Sweden produce principally for domestic use, while the ones in Lapland to the north are worked largely for export, with much of the output being shipped through the Norwegian port of Narvik. Production in 1956 was 18,947,000 metric tons. Gold production was 115,740 troy oz. Other major minerals are copper (32,187 tons), lead (23,348 tons), arsenic ore (45,200 tons), manganese ore (29,250 tons) and silver (2,048,000 oz.). Coal production (294,000 tons in 1956) is comparatively small; imports of several million tons a year are therefore necessary. Deposits of uranium have been reported.

Forests and Fisheries. About 60 per cent of Sweden is forested, mostly conifers, and there are vast forest products industries in the north. Sweden supplies a large percentage of the world's mechanical and chemical pulp. In 1955, 3,903,800 metric tons of wood pulp, 366,000 tons of newsprint, 936,000 tons of other paper and 212,000 tons of cardboard were produced.

The yield of the salt water fisheries varies considerably (in 1955, 209,000 metric tons valued at 133,000,000 kr.; in 1956, 174,000 tons valued at 127,000,000 kr.). About half the catch usually is herring;

cod, Baltic herring and mackerel are also taken in large quantities. The largest part (71% in 1955) of the yield comes from the west coast.

Climate. Sweden's climate is diversified. The warmest month is usually July, with a mean temperature of 62° in Stockholm. February is the coldest month, with a mean average below 32° for all Sweden (25.7° at Stockholm). Average annual rainfall in the north is 16.5 inches; in the south, 22.5 inches.

Switzerland (Republic) (Schweiz-Suisse-Svizzera)

Area: 15,941 square miles.

Population (est. Dec. 1956): 5,074,000 (Swiss, 91.2%; German, 3.6%; Italian, 3.1%; French, .9%; others, 1.2%—figures by place of birth).

Density per square mile: 318.3.

President (1957): Hans Streuli.*

Principal cities (est. Dec. 1956): Zürich, 422,000 (textiles, banking); Basel, 197,000 (rail center; Rhine port); Geneva, 164,400 (intellectual center); Bern, 158,700 (federal capital).

Monetary unit: Swiss franc.

Languages: German, 71.9%; French, 20.4%; Italian, 6.0%; Romansch, 1.1%; others, .6%.

Religions: Protestant, 57%; Roman Catholic, 41%; Jewish, .4%; others, 1.6%.

* The vice president ordinarily becomes president the next year. Vice-president in 1957: Thomas Holenstein.

HISTORY. Swiss history is principally the story of the federation of various fiefs of the Holy Roman Empire into a single union for common defense. The process began in 1291, with the cantons of Uri, Schwyz and Nidwalden as the nucleus. Over the next 300 years, ten new cantons entered the federation, which nominally remained part of the Holy Roman Empire until the Treaty of Westphalia gave it independence in 1648.

The French revolutionary army succeeded in occupying Switzerland in 1798 and organized it as the Helvetic Republic, but Napoleon restored the federation in 1803. The Congress of Vienna (1815) declared Switzerland an independent, neutral state in perpetuity, and fixed the nation's borders as they exist today. Out of the brief Swiss civil war of 1847 came the democratic Constitution of 1848, which was influenced by the U. S. Constitution.

Switzerland maintained strict neutrality in World Wars I and II.

GOVERNMENT AND DEFENSE. Since the adoption in 1874 of their present Constitution, the Swiss have had a federation of 22 sovereign cantons. Each canton has its own legislature, executive and judiciary departments, with the right of veto over federal legislation through referendum.

The Federal Assembly has two houses—a Council of States of 44 members, two

from each canton, and a National Council of 196 members elected for four-year terms. The seven members of the Cabinet (Federal Council) are elected for four years by the Federal Assembly, which also elects the Swiss President from among its own members for a period of one year. The federal government is supreme in matters of war, peace and treaties, and regulates the army, railroads, postal service, mints and national bank note issues.

In peacetime, the highest Swiss army officer is a colonel. In wartime a commander in chief is named with rank of general. Since the army is a national militia, it maintains no standing forces, but military service is compulsory from the ages of 18 to 60, with an initial training period of about three months and an 11-day refresher course once a year. The force of men trained and physically fit is about 650,000. The air force has about 5,000 personnel and 400 planes.

SOCIAL AND ECONOMIC CONDITIONS. Primary education is compulsory, free and locally controlled. In 1953-54, primary schools had 518,050 pupils and secondary schools had 85,477. There are seven universities, with an enrollment of 12,413 students in 1954-55.

Religious freedom is guaranteed under the constitution. German, Italian and French were recognized as national languages in 1874, and Romansch, a dialect of the Alpine regions, was also made a national language in 1937.

With nearly a fourth of its land unproductive, and with half of it in pasture or forest area, Switzerland is dependent on imports for food supply. Wheat, potatoes, fruits, oats, barley, rye, sugar beets and grapes are grown, but stockraising and dairy farming account for three-fourths of the agricultural production. In 1957 there were 1,642,600 cattle, 1,160,000 hogs, 112,900 horses; (1955) 200,684 sheep, 112,463 goats. Production of cheese in 1955 was 56,400 metric tons; of butter, 25,200 tons.

Manufacturing is the principal economic activity, with more than 40 per cent of the population being sustained by manufactures or mechanical pursuits. Industry is conducted largely in small plants using highly skilled workers. Almost all the raw materials are imported, and products consist almost exclusively of high grade, expensive commodities. In 1956 there were 12,057 factories with 614,436 workers.

Manufactures include chemical products, machines, watches, textiles, aluminum, precision instruments, lumber, shoes and fine handmade embroidery. Chief agricultural industries are the manufacture of fine cheeses and condensed milk. With its many scenic attractions, Switzerland draws the heaviest and most profitable tourist trade in Europe.

Switzerland is dependent on foreign trade for its prosperity. Trade statistics are as follows, in millions of Swiss francs:

	1954	1955	1956
Exports	5,272	5,622	6,203
Imports	5,592	6,401	7,597

In 1956 the leading customers were western Germany (12%), the U. S. (10%), Italy (8%), France (6%) and Britain (5%). Leading suppliers were western Germany (24%), the U. S. (13%), France (11%), Italy (10%) and Britain (5%). Leading exports were machinery (21%), clocks and watches (20%), chemicals and drugs (14%), textiles and clothing (12%).

The Rhine, navigable from Basel to the North Sea, is the principal inland waterway. Railways built over rugged terrain entailing construction of many bridges and tunnels, total about 4,900 miles, mostly electrified. Road mileage is about 10,500.

Financial data in millions of Swiss fr.:

	1955	1956	1957*
Revenue	2,245.2	2,610.6	2,285.4
Expenditure	1,948.7	1,963.6	2,006.9

* Budget estimate.

The debt of the Confederation alone (excluding the railway debt) was 7,472,000,-000 fr. on Dec. 31, 1956.

NATURAL FEATURES; CLIMATE. Most of Switzerland comprises a mountainous plateau bordered by the great bulk of the Alps on the south and by the Jura Mountains on the northwest. Its greatest length is 226 miles, greatest width, 137 miles. About a fourth of the total area of Switzerland is covered by scenic mountains and glaciers.

The country's largest lakes, Geneva, Constance (Boden See) and Maggiore, straddle the French, German-Austrian and Italian borders, respectively.

The climate is temperate and varies greatly with altitude. The coldest month (January), for example, averages 31.8° at Basel, which is 909 feet in elevation, and 16.2° at Säntis, with altitude of 8,202 feet.

Syria (Republic)

(Al-Jamhourya as-Souriya)

Area: 70,014 square miles.

Population (est. Dec. 31, 1956): 4,025,165 (Arab, Armenian, Kurdish, Turkish, French).

Density per square mile: 57.5.

President: Shukri al-Kuwatli.

Premier: Sabri el-Assali.

Principal cities (est. 1955): Damascus, 408,774 (capital); Aleppo, 407,613 (northern trading center); (est. 1954) Homs, 293,643 (farming, silk); Hama, 172,988 (Bedouin trading center).

Monetary unit: Syrian pound (£S).

Languages: Arabic, Aramaic, French.

Religions (est. 1949): Moslem, 85%; Christian, 13.9%; Jewish, 1%; others, 1.1%.

HISTORY. Ancient Syria was conquered by Egypt about 1500 B.C., and after that by Hebrews, Phoenicians, Assyrians, Chaldeans, Persians and Greeks. From 64 B.C. until the Arab conquest in A.D. 636, it was part of the Roman Empire except during brief periods. The Arabs made it a trade center for their whole empire, but it suffered severely from the Mongol invasion in 1260 and fell to the Ottoman Turks in 1516. Syria remained a Turkish province until World War I.

A secret Anglo-French pact of 1916 put Syria in the French zone of influence. The League of Nations gave France a mandate over Syria after World War I, but the French were forced to put down several nationalist uprisings. In 1930, France recognized Syria as an independent republic, but still subject to the mandate. After nationalist demonstrations in 1939, the French High Commissioner suspended the Syrian Constitution. In 1941, British and Free French forces invaded Syria to eliminate Vichy control. During the rest of World War II, Syria was an Allied base. Again in 1945, nationalist demonstrations broke into actual fighting, and British troops had to restore order. Syrian forces met a series of reverses while participating in the Arab invasion of Palestine in 1948. After Mar. 30, 1949, when the government was overthrown by Husni Zayim, there were several army *coups d'état*. That of Nov. 29, 1951, was engineered by Col. Adib Shishakly. Elected President in July 1953, Shishakly was ousted on Feb. 25, 1954, by the army, which named Hachem Bey el-Attassi President. On Aug. 18, 1955, Shukri al-Kuwatly was elected President. **GOVERNMENT AND DEFENSE.** Under the 1950 Constitution, restored in 1954, legislative power is vested in a unicameral Parliament. Executive power is exercised by the President through the Premier and his Cabinet.

There is an army of about 65,000; a small air force and a navy with a few coastal vessels.

SOCIAL AND ECONOMIC CONDITIONS. Primary education is compulsory. In 1954 Syria had 2,595 primary and 212 secondary schools, with total enrollment of 373,478. There is a university at Damascus.

Agriculture and animal breeding are the main industries. Only half the land is arable, and only a third is actually cultivated. Most crops require irrigation. In 1955-56 Syria grew 1,051,000 metric tons of wheat and 462,000 tons of barley. Other leading crops include sorghum, olives, cotton, grapes, lentils and tobacco. Stock-raising is important among nomads.

Recent foreign trade data are as follows (in millions of U. S. dollars):

	1954	1955	1956
Exports	147.9	143.7	158.2
Imports	174.2	179.1	188.3

Leading exports in 1955 were raw cotton (50%), wool (7%) and sheep (6%). Principal customers were Lebanon (21%), France (20%) and Italy (10%); leading suppliers, Britain (13%), the U. S. (11%) and western Germany (10%).

In 1953 Syria had 4,332 miles of highway and, in 1955, 560 miles of railway.

NATURAL FEATURES; CLIMATE. Coastal Syria is a narrow plain. Back of that is a range of coastal mountains, and still farther inland is a steppe area. In the east is the Syrian Desert, and in the southeast next to Jordan is the Jebel Druze Range. The climate is subtropical, with rainfall averaging 50 inches on the coastal range but diminishing to less than four inches in parts of the desert. Summer temperatures at Aleppo range from about 75° at night to 100° during the day; winter temperatures, from freezing to 50°.

Thailand (Siam) (Kingdom)

(Muang Thai)

Area: 198,270 square miles.

Population (est. 1956): 20,686,000 (1937: Thai, 90%; Chinese, 3.4%; Indian and Malayan, 3.4%; others, 3.2%).

Density per square mile: 104.3.

Ruler: King Rama IX.

Prime Minister: Pote Sarasin.

Principal cities (census 1947): Bangkok, 620,830 (capital, chief port); Khon Kaen, 153,934 (trading center); Buri Ram, 129,000 (farming); Thonburi, 118,682 (market center).

Monetary unit: Baht.

Languages: Thai (Siamese), Chinese.

Religions (census 1947): Buddhist, 95%;

Moslem, 4%; others, 1%.

* Including about 2,500,000 of Chinese descent born in Siam.

HISTORY. The Siamese first began moving down into their present homeland from the Asiatic continent in the 6th century A.D., and by the end of the 13th century ruled most of the western portion. During the next 400 years, the Siamese fought sporadically with the Cambodians to the east and the Burmese to the west. The British obtained recognition of paramount interest in Siam in 1824, and in 1896 an Anglo-French accord guaranteed Siamese independence.

A coup on June 24, 1932, changed the absolute monarchy into a representative government with universal suffrage. Thus shorn of much power, King Prajadhipok abdicated in March 1935 in favor of his nephew, Prince Ananda Mahidol. After five hours of token resistance on Dec. 8, 1941, Siam yielded to Japanese occupation and became one of the springboards in World War II for the Japanese campaign against Malaya. After the fall of its pro-Japanese puppet government in July 1944, Siam pursued a policy of passive resistance

against the Japanese, and on Aug. 16, 1945, after the Japanese surrender, Siam repudiated the declarations of war it had made against Britain and the U. S. in 1942.

By a treaty signed with Britain and India Jan. 1, 1946, Siam renounced all wartime acquisitions of Malayan territory and agreed that no canal linking the Gulf of Siam with the Indian Ocean would be cut across Siamese territory without British concurrence.

RULER. Rama IX, who was born Dec. 5, 1927, second son of Prince Mahidol of Songkhla, succeeded to the throne on June 9, 1946, when his brother, King Ananda Mahidol, died of a gunshot wound. He was married on April 28, 1950, to Princess Kitiyakara; their son, Vajiralongkorn, born July 28, 1952, is heir apparent.

GOVERNMENT AND DEFENSE. Thailand is a constitutional hereditary monarchy. Under the 1932 Constitution, restored after the Dec. 1951 *coup d'état* to replace that of 1949, there is a unicameral Parliament, half nominated, half elected. The government is administered by the Prime Minister and his Cabinet, who are responsible to the Parliament.

The 1937 defense act made military service compulsory for a period of two years between the ages of 18 and 30. The army has about 30,000 men. There is a fair-sized air force. The navy in 1956 had 5 frigates and escort vessels and 4 submarines.

SOCIAL AND ECONOMIC CONDITIONS. Buddhist monasteries throughout Thailand control most of the elementary education in rural districts. In 1954 there were 19,331 state primary schools with 2,857,411 students and 267 state secondary schools with 96,300 students; private secondary schools had 110,797 students. There are 5 institutions of higher learning. Illiteracy (10 years and over) was 46.3% in 1947.

Almost 90 per cent of the population work at agriculture. Rice (1956-57: 8,009,000 metric tons) is the principal crop, the staple food and the leading export. It is the basis of Thailand's whole economy and the key to its prosperity. Next most important is rubber (exports 1956: 135,720 metric tons). Other products include coconuts, corn, tobacco, cotton, sesame, sugar cane and soybeans. Livestock, poor in quality and quantity, is used mainly for hauling. Manufacturing is of little importance. Domestic business is largely controlled by Chinese.

Recent trade statistics are as follows (in millions of U. S. dollars):

	1954	1955	1956*
Exports	283.4	335.1	335.2
Imports	311.7	333.8	361.9

* Provisional.

Chief exports in 1956 were rice (41%), rubber (22%) and tin (7%). Leading customers were Malaya and Singapore (29%),

the U. S. (25%) and Japan (9%); leading suppliers, Japan (17%), the U. S. (16%) and Hong Kong (16%).

There are good water routes which handle about 80 per cent of all internal traffic. Bangkok, the chief port, 25 miles up the Chaopaya River from the Gulf of Siam, handles about 80 per cent of the foreign trade. Railways under government ownership total 2,032 miles, and in 1954 there were about 4,700 miles of highway.

The 1957 budget estimated revenue at 5,120,000,000 baht, ordinary expenditure at 5,070,000,000 baht and capital expenditure at 1,274,100,000 baht.

NATURAL FEATURES AND RESOURCES; CLIMATE. Thailand, about three-fourths the size of Texas, supports most of its population in the central alluvial plain which is drained by the Chaopaya River and tributaries. There are small deposits of many important minerals, and some precious stones. Only tin, gold, tungsten and salt are in commercial production. Tin output in 1940 was 20,841 tons (10% of the world total), but production in 1956 was only 12,090 metric tons (tin-in-concentrates).

Almost 70 per cent of Thailand's total land area is forested. Teak, the main forest product, covers over one-third of this area, chiefly in the northern hill country. Other forest products of Thailand include thingan wood, ironwood, ebony, rattan and sticklac.

Fisheries, both ocean and river, ordinarily rank second to agriculture.

The climate is monsoonal, but the full force of the monsoons is broken by the western hills. Rainfall decreases from south to north. Humidity is always high, but temperatures fall as low as 40° in the November-February cool season. Inland temperatures often rise to 100°.

Trieste

This former free territory (293 sq. mi.) on the northeastern Adriatic was divided *de facto* between Italy and Yugoslavia under the provisions of a memorandum of understanding signed Oct. 5, 1954. Most of the area (202 sq. mi.) went to Yugoslavia; the smaller (91 sq. mi.) but far more densely populated part, including the city of Trieste, went to Italy.

The free territory had been created under the provisions of the Italian peace treaty of 1947 and was to be under U. N. protection. It proved to be impossible to implement the treaty provisions, and Yugoslav and Anglo-U. S. occupation forces had continued the occupation begun in 1945 of substantially the areas transferred to Yugoslavia and Italy, respectively, in 1954.

Tunisia (Republic)

Area: 48,332 square miles.

Population (census 1956)*: 3,782,480 (1946, by place of birth: Tunisian, 89.9%; French, 4.5%; Italian, 2.6%; others, 3%).

Density per square mile: 78.3.

President: Habib Bourguiba.

Principal cities (census 1956)*: Tunis, 410,000 (capital); Sfax, 65,635 (phosphate port); Sousse, 48,172 (seaport); Bizerte, 44,461 (seaport and naval base).

Monetary unit: Tunisian franc.

Languages: Arabic, French, Italian.

Religion: Predominantly Moslem.

* Preliminary figures.

HISTORY. Tunisia was settled by the Phoenicians and Carthaginians in ancient times. Except for an interval of Vandal conquest in A.D. 439-533, it was part of the Roman Empire until the Arab conquest of 648-69. Then it was ruled by various Arab and Berber dynasties until the Turks took it in 1570-74. The founder of the present dynasty, Hussein ben'Ali, was proclaimed sovereign by the occupation troops in 1705 and later succeeded in making the office hereditary, although subject to nominal Turkish sovereignty.

Throughout much of its history, Tunisia was essentially a pirate state, preying on Mediterranean shipping. In modern times, Italy became predominant economically in the area, but after French troops occupied the area in 1881, the Bey signed a treaty acknowledging a French protectorate.

Following the Allied landings in North Africa in 1942, Tunisia became a battleground with the Axis forces pinched between the British 8th Army advancing from Libya and the U. S., British and French forces from Algeria. The Axis units surrendered in May 1943, and Tunisia was turned over to the De Gaulle government.

Nationalist agitation forced France to grant internal autonomy to Tunisia in June 1955 and to recognize Tunisian independence and sovereignty in March 1956. Tunisia was admitted to the U. N. Nov. 12, 1956. The Constituent Assembly deposed the Bey on July 25, 1957, declared Tunisia a republic and elected Habib Bourguiba as the first President.

GOVERNMENT. A Constitution was being drafted in 1957 by the Constituent Assembly, which was elected by popular vote on March 25, 1956. In the interim the President is assisted by a Cabinet of state secretaries responsible to him. France is represented by an ambassador.

All 98 seats in the Constituent Assembly are held by the National Front headed by Habib Bourguiba, whose party is known as the *Néo-Destour*.

SOCIAL AND ECONOMIC CONDITIONS. In 1954, Tunisia's 729 public and 230

private schools had 264,530 pupils, about a fourth of them French and Italian. The Great Mosque at Tunis is a Moslem University.

Tunisia's population (by the 1946 census, 87.4 per cent Arab) is concentrated in the cities and on the coast. There are about 100,000 nomads.

Agriculture is the chief industry. Over a quarter of the arable land is in wheat (1956: 499,000 metric tons). Other important crops are barley, oats, corn, sorghum, beans and peas. Wine production in 1956 was 26,000,000 U. S. gallons. Average annual olive oil production is about 55,000 metric tons (1956: 95,000 tons). The Cape Bon region is largely devoted to citrus fruits, the southern oases to dates. In 1954 there were 3,352,100 sheep, 482,500 cattle, 1,853,000 goats and 202,200 camels.

Leading industries include flour milling, oil refining, lead smelting and distilling. Native industries include the spinning and weaving of wool, and the making of pottery and leather goods.

Tunisia, Algeria and France are under a single customs union for a number of products. Recent trade data are as follows (millions of francs):

	1953	1954	1955
Exports	39,103	44,477	37,140
Imports	60,121	59,268	63,199

Leading exports in 1955 were phosphates (15%), wheat (12%), iron ore (8%) and olive oil (7%). France took 55% of the exports and supplied 75% of the imports.

There were 5,600 miles of roads in 1954, 1,300 miles of railway in 1953. Tunis, Bizerte, Sousse and Sfax are principal ports.

NATURAL FEATURES AND RESOURCES; CLIMATE. Tunisia, at the northernmost bulge of Africa, thrusts out toward Sicily to mark the division between the eastern and western Mediterranean. It is mountainous in the north, covered by plains in the east, and projects southward to the Sahara area.

Tunisia's extremely rich deposits of phosphates are mined principally in the Gafsa and Kef regions. Production in 1956 was 2,076,600 metric tons. The iron ore is of good quality (55% metal content; production in 1956: 1,168,900 tons). Other minerals are lead (1956: 38,900 tons), zinc, mercury, manganese, copper, salt and poor-grade lignite.

The climate is Mediterranean with mean temperature extremes at Tunis of 52.7° and 79.2°. Annual rainfall ranges from 24 inches in the north to less than five inches in the south.

Turkey (Republic)

(Türkiye Cümhuriyeti)

Area: 296,185 square miles.

Population (est. 1956)*: 24,797,000
(Turkish, 94%; Greek, 2.2%; Bulgarian, 1.4%; Yugoslavian, .9%; others, 1.5%).†

Density per square mile: 83.7.

President: Celâl Bayar.

Premier: Adnan Menderes.

Principal cities (census 1955)*: Istanbul, 1,214,616 (chief port, commercial center); Ankara, 453,151 (capital); Smyrna, 286,310 (seaport); Adana, 172,465 (agricultural center); Bursa, 131,336 (silk, carpets); Eskişehir, 122,755 (trading center).

Monetary unit: Turkish pound (₺).

Languages: Turkish, Greek, Bulgarian.

Religions: Moslem, 98.6%; others, 1.4%.

* Preliminary figures. † 1935, by place of birth.

HISTORY. The Ottoman Turks first appeared in the early 13th century A.D. Under the leadership of their Sultans, they gradually spread their hegemony over most of the Near East and the Balkans, capturing Constantinople in 1453 and storming the gates of Vienna in the 17th century. At the height of its power, the empire stretched from the Persian Gulf to the frontiers of Poland and from the shores of the Caspian Sea to Oran in Algeria.

The defeat of the Turkish navy at Lepanto in 1571 by the Holy League and of Turkish forces besieging Vienna in 1683 portended the decline of Ottoman power, reducing Turkey to the status of a pawn in Europe's political maneuvers. Russia moved into the Balkans in the 18th century and made herself official protector of the Balkan Christians. Fear of a Russian drive on Constantinople prompted England and France to declare war on Russia, and the Crimean War (1853-56) followed. As a result of the Russo-Turkish war (1877-78), Bulgaria became practically independent, and Rumania and Serbia threw off their nominal allegiance to the sultan. Further defeats were suffered by Turkey in a war with Italy (1911-12) and in the Balkan Wars (1912-13). Meanwhile, a revolt led by the Young Turks, an organization of youthful liberals, had forced the abdication of Sultan Abdul-Hamid in 1909 and established a constitutional regime.

On Aug. 2, 1914, at the outbreak of World War I, a secret alliance was signed between Germany and Turkey, whose army was advised by a German military mission, and in September the Allies declared war on Turkey. Turkish forces successfully defended the strategic Dardanelles, but British forces seized Palestine, Mesopotamia and Syria; and the Hejaz revolted. By 1918 Allied forces held the territory along the Dardanelles and the Bosphorus, and later Greek forces occupied Smyrna.

In 1919 the new Nationalist party, headed by Mustafa Kemal, was organized

to resist the Allied occupation, and in 1920 a National Assembly elected Mustafa Kemal President of both the Assembly and the government. Under his leadership, the Nationalist government was recognized by foreign powers, the Greeks were driven out of Smyrna, and other Allied forces were withdrawn. The present Turkish boundaries (with the exception of Alexandretta, ceded to Turkey by France in 1939) were fixed by the Treaty of Lausanne (1923) and later negotiations. The caliphate and sultanate were separated and the sultanate abolished on Oct. 1, 1922. On Oct. 29, 1923, Turkey formally became a republic with Mustafa Kemal, who took the name of Kemal Atatürk, as its first President. He proceeded to carry out an extensive program of reform, modernization and industrialization.

The Montreux Convention (1936) gave Turkey sole responsibility for the defense of the Dardanelles.

General Ismet İnönü was elected to succeed Kemal Atatürk on the latter's death in 1938 and was re-elected in 1939, 1943 and 1946, but was defeated in 1950 and succeeded by Celâl Bayar. On Oct. 19, 1939, a mutual assistance pact was concluded with Britain and France. Turkey followed a neutral course during most of World War II, but on Feb. 23, 1945, she declared war on Germany and Japan, but took no active part in the conflict. After the abrogation of the Soviet-Turkish non-aggression pact in March 1945, Turkey was subjected to Soviet pressure for a share in the control of the Dardanelles. To assist Turkey in effecting modernization necessary for the preservation of its national integrity, the U. S. in 1947 agreed to advance \$100,000,000, all of which was to be used for the armed forces or to a lesser extent for economic projects directly related to Turkish defense. Turkey also received aid under the European Recovery Program. It became a full member of NATO in 1952.

GOVERNMENT AND DEFENSE. The Constitution, as amended in 1937, defines the state as "republican, nationalist, populist, étatist, secular, and revolutionary." The President is chosen from the deputies of the National Assembly; his term of office is identical with the life of each Assembly. The 541 members of the Assembly are elected by universal suffrage for a term of four years. According to the Turkish Constitution, the Assembly exercises the executive power through the President and the Council of Ministers (cabinet) which is appointed by him.

The Republican People's party, which had been in power since 1923, was overwhelmingly defeated in free elections held May 14, 1950, by the Democratic party. The latter was retained in office by an even wider margin in elections held May 2, 1954,

in which it won 503 seats in the Assembly. Centralization is the basis of the governmental system. The pre-republic judicial system, based on Sunni Moslem law, was replaced in 1926 by a new system based on the Swiss civil code.

Defense. Military service is compulsory from 20 to 45; the initial training period is three years. The strength of the army was about 300,000 in 1957.

Large purchases of modern material were made during World War II, and additional armaments were received from the U. S. after the war. The navy in 1957 had 1 battle cruiser, 10 fleet destroyers and 12 submarines, in addition to smaller craft, including a number of former U. S. and British minesweepers. A regimental combat team of 5,000 men was dispatched to Korea in 1950.

SOCIAL AND ECONOMIC CONDITIONS.

Education. Elementary education is nominally obligatory from 7 to 12. Only 24.2% of the whole population could read and write in 1945, but 44.6% of those over 10 were literate in 1950. In 1954, there were 18,058 primary schools with 1,749,517 pupils and 620 secondary schools and *lycées* with 128,777 pupils. In 1952-53 there were 33 institutions of higher learning with 26,345 students. The Latin alphabet replaced the Arabic script in 1928.

Agriculture and Industry. Agriculture is the principal economic activity, engaging about 65 per cent of the population. Only about 20 per cent of the land is under cultivation, but the government has made great efforts to modernize and improve farming. The most important cash crop is tobacco (1955: 109,000 metric tons). Cotton (1956: 165,000 metric tons, ginned) is grown in the south of Asia Minor while figs come exclusively from the Smyrna region. Grain crops, with 1956 production in metric tons, include wheat, 6,612,000, and barley, 2,900,000. Turkey is a leading exporter of olive oil; the Brusa region and the Ionian coast are the principal areas of cultivation. Opium poppies are grown in the Smyrna, Malatia and Tokat regions.

Turkey is rich in livestock. The most important animal is the goat, of which there were 21,045,000 in Dec. 1953, including the valuable Angora, which thrives on the uplands of the plateau. There were also (Dec. 1955) 26,444,000 sheep, 11,059,000 cattle and (Dec. 1954) 1,214,000 horses. Wool production in 1956 was 20,000 metric tons, clean basis.

Staple industries have been established in iron, steel, textiles, paper, glass, sugar and cement. In 1956, 217,200 metric tons of pig iron and 192,000 tons of steel were produced. A large proportion of the factories are government-operated. Istanbul is the major industrial area.

Trade. Turkey's foreign trade was as follows, in millions of Turkish pounds:

	1954	1955	1956
Exports	938	877	854
Imports*	1,339	1,393	1,141

* Includes military equipment imported under U. S. military assistance program.

Principal customers in 1956 were the U. S. (20%), western Germany (17%), Italy (10%) and Britain (8%). Leading suppliers were western Germany (24%), the U. S. (21%), Britain (8%) and Italy (6%). Chief exports were tobacco (31%), hazelnuts (10%), cotton (9%) and chrome (8%); leading imports, machinery, iron, steel, fuel and oil.

Communications and Finance. In June 1956, Turkey had a merchant fleet of 284 vessels (100 tons and over) aggregating 601,485 gross tons. The length of railways (1955) was 4,792 miles. Highway mileage was 28,415 in 1954.

Recent public finance data are as follows, in millions of Turkish pounds:

	1955-56*	1956-57*	1957-58*
Revenue	2,789	3,325	4,007
Expenditure	2,941	3,325	4,007

* Budget estimate.

The public debt, consolidated and floating, on Aug. 31, 1956, was £T3,707,446,000. **NATURAL FEATURES AND RESOURCES; CLIMATE.** Turkey is divided into two natural areas by the historic waterway formed by the Dardanelles, the Sea of Marmara and the Bosphorus.

Turkey in Europe comprises an area about equal to the state of Massachusetts. It is hilly country drained by the Maritsa River and its tributaries. Almost all the population is concentrated in and near the two important towns, Istanbul (Constantinople) and Edirne (Adrianople). Turkey in Asia, or Anatolia, about the size of Texas, is roughly a rectangle in shape with its short sides on the east and west. Its center is a treeless plateau rimmed by mountains.

Minerals and Forests. Turkey's rich mineral resources are still comparatively unexploited. Deposits of copper in the large field at Arghana, near the Iraq-Syrian frontier, have been estimated at 1,600,000 tons (1956 output: 24,720 metric tons). Turkey is also relatively rich in coal, with large deposits in the Eregli region on the Pontic coast some 150 miles from Istanbul (1956 output: 3,720,000 tons). A virtual world monopoly is enjoyed in meerschaum, found in the Eskisehir district. Other important minerals include chromite (1955: 649,140 tons), petroleum (1955: 1,200,000 barrels), manganese ore (1955: 50,100 tons), iron ore (metal content 65%) (1955: 760,080 tons), emery and antimony.

Climate. Along the coast from Antioch to the Dardanelles the climate is Mediter-

ranean, with rainy winters and dry summers. Thence to the Bosphorus it is transitional to the type of climate with heavy year-round rainfall. Semitropical fruits and tea may be grown in the region beyond Trebizond on the Black Sea. The western plateau has a harsh steppe climate, with cold winters, hot summers and scanty rainfall, while the eastern plateau exhibits a transition from steppe to alpine climate. Istanbul has a mean annual temperature of 57° (maximum 99°, minimum 17°) and average yearly rainfall of 28.3 inches.

Union of Soviet Socialist Republics

Area: 8,602,700 square miles.

Population (est. April 1956)*: 200,200,000 (1939: Great Russian, 58.4%; Ukrainian, 16.6%; Byelorussian, 3.1%; Uzbek, 2.9%; Tartar, 2.5%; Kazakh, 1.8%; Armenian, Azerbaijani, Georgian, each 1.3%; more than 100 others, 10.8%).

Density per square mile: 23.3.

Chairman of Presidium of Supreme Council: Klementi E. Voroshilov.

Premier: Nikolai A. Bulganin.

Principal cities (est. April 1956)*: Moscow, 4,389,000 (capital); Leningrad, 2,814,000 (industrial center, shipbuilding); Kiev, 991,000 (industrial center, Ukraine); Baku, 901,000 (oil center, Azerbaijan); Kharkov, 877,000 (iron and steel, coal); Gorki, 876,000 (industrial, transportation center); Tashkent, 778,000 (textiles, tobacco); Kuibyshev, 760,000 (industrial center, Volga port); Novosibirsk, 731,000 (Siberian industrial center); Sverdlovsk, 707,000 (Ural industrial center); Tbilisi, 635,000 (building materials, tobacco); Stalino, 625,000 (coal, metallurgy).

Monetary unit: Rouble.

Languages: See Population, above.

Religions: Russian Orthodox (predominant), Moslem, Roman Catholic, Jewish, Lutheran.

* Official estimate of the Central Statistical Board of the Soviet Council of Ministers.

HISTORY. The history of Russia begins with the perhaps legendary figure of the Viking Rurik, who according to tradition came to Russia in A.D. 862 and founded the first Russian dynasty in Novgorod. The various tribes were united by the spread of Christianity in the 10th and 11th centuries; Vladimir "the Saint" was converted in 988. During the 11th century the grand dukes of Kiev held such centralizing power as existed. In 1240 Kiev was destroyed by the Mongols, and the Russian territory was split into numerous smaller dukedoms, out of which three large centers emerged—Galicia, Moscow and Novgorod. The early dukes of Moscow extended their dominions through their office of tribute collector for the Mongols.

In the late 15th century, Ivan III, the reigning duke, acquired the rival kingdoms of Novgorod and Tver and threw off the Mongol yoke. Ivan IV, the Terrible

(1533–84), first Muscovite duke to assume the title of Tsar, is considered to have founded the Russian State. He crushed the power of rival princes and boyars (great land-owners), but Russia remained largely medieval until the reign of Peter the Great (1682–1725), grandson of the first Romanov Tsar, Michael (1613–45). Peter made extensive reforms aimed at Westernization, and through his defeat of Charles XII of Sweden at the Battle of Poltava (1709), he extended Russia's boundaries to the west. Catherine the Great (1762–96) continued Peter's Westernization program and also expanded Russian territory, acquiring the Crimea and part of Poland. During the reign of Alexander I (1801–25), Napoleon's attempt to subdue Russia was defeated (1812–13), and new territory was gained, including Finland (1809) and Bessarabia (1812). Alexander was the originator of the Holy Alliance which crushed for a time Europe's rising liberal movement. During the century between the Napoleonic Wars and World War I, a few reforms were introduced; however, the autocratic power of the Tsars remained.

During the reign of Alexander II (1855–81), Russia's borders were pushed to the Pacific and into central Asia. Serfdom was abolished in 1861, but heavy restrictions were imposed on the emancipated class. Revolutionary strikes following Russia's defeat in the war with Japan forced Nicholas II (1894–1917) to grant a representative national body (Duma), elected by narrowly limited suffrage. It met for the first time in 1906. Nicholas continued in his reactionary course, however, and the overwhelmingly liberal Duma had little or no influence in the government.

World War I demonstrated the corruptness and inefficiency of the tsarist regime, although the call of patriotism held the poorly equipped army together for a time. Disorders broke out in Petrograd (now Leningrad) in March 1917, and, following the winning over of the Petrograd garrison, the revolution was in full swing. Nicholas was forced to abdicate under pressure from the Duma and was later killed by the revolutionists. A provisional government was formed, composed of both conservative and radical elements. This government, under the successive premier-ships of Prince Lvov and Alexander Kerensky, a Menshevik or moderate socialist, soon lost ground to the radical or Bolshevik wing of the Socialist Democratic Labor party. Finally, on Nov. 7, 1917, came the Second Revolution, engineered by Nikolai Lenin and Leon Trotsky and their small but well-disciplined Bolshevik following in the Petrograd Soviet. The government was turned over the next day to the Congress of Soviets (councils of soldiers, peasants and workers), which vested the government in a Council of People's Commissars

with Lenin as Premier and Trotsky as Foreign Minister. The humiliating Treaty of Brest-Litovsk (March 3, 1918) concluded the war with Germany, but civil war and intervention by foreign powers prevented the new Communist government from gaining control of all Russia until 1920. A brief war with Poland occurred in 1920, but it resulted in Russian defeat.

On July 6, 1923, the vast territory under Soviet rule—previously an inchoate mass whose constituent parts were changing constantly—became the Union of Soviet Socialist Republics, which was formed by the union of the Russian S.F.S.R. and the Ukrainian, Byelorussian and Transcaucasian S.S.R.'s.

The sudden death of Lenin (Jan. 21, 1924) precipitated an intraparty struggle between the group led by Joseph Stalin, General Secretary of the party, and the opposition, led by Trotsky, which favored not only swifter socialization at home but fomentation of revolution abroad. In 1927, Trotsky and other opposition leaders were expelled from the party and exiled. The first Five-Year Plan (1928-32) called for gradual, progressive increase in industrial and agricultural production. Its collectivization program was opposed by the Kulaks, or wealthier peasants, who were vigorously suppressed. Purges carried out in 1936-38 removed many prominent leaders of the Revolution and top army officers.

Soviet foreign policy—first featured by friendship with Germany and antagonism toward England and France and then, after Hitler's rise to power in 1933, by participation in the League of Nations and an anti-Fascist program—took another abrupt turn on Aug. 24, 1939, with the signing of a Soviet-German nonaggression pact. Territory seized from Poland (Sept. 1939) became part of the Ukrainian and Byelorussian S.S.R.'s; that secured from Finland at the conclusion of the Finnish war of 1939-40, part of the Karelian S.S.R. set up March 31, 1940; that secured from Rumania (Bessarabia and northern Bukovina), part of the Moldavian S.S.R. set up Aug. 2, 1940; and finally the formerly independent states of Estonia, Latvia and Lithuania, occupied in June 1940, were absorbed into the U.S.S.R. as the 14th, 15th and 16th Soviet Republics. The latter annexations have not been recognized by the United States, Britain, and the majority of other nations.

Immediately following the German attack (June 22, 1941), all necessary powers for the defense of the state were vested in the State Defense Council headed by Stalin, who had taken over the post of Premier on May 6. The Germans quickly seized approximately 500,000 square miles of Soviet territory, but Soviet forces resisted stubbornly, aided by increasing amounts of matériel from the U. S. and

Britain. The great Soviet counteroffensive in the Stalingrad area (Nov. 1942-Feb. 1943) marked the turning point. Soviet troops gradually pushed the Nazis back and unleashed their final great offensive on Jan. 12, 1945. The nonaggression pact with Japan (1941) was denounced in April 1945, and, following the declaration of war on Japan (Aug. 8, 1945), Soviet Far Eastern forces quickly occupied Manchuria, Karafuto and the Kuriles.

After the war, with its eastern European satellites drawn together into a solid bloc in opposition to the western democracies, the Soviet Union launched a full-scale political offensive against the non-Communist world. The western powers, however, countered the Soviet blockade of Berlin with a highly effective "airlift," completed the unification of western Germany and went on to unite western Europe into opposition to Communist aggression through the North Atlantic Pact.

Stalin died on Mar. 6, 1953. The next day Georgi M. Malenkov succeeded him as Premier. Malenkov's chief rivals for power—L. P. Beria, V. M. Molotov, N. A. Bulganin and L. M. Kaganovich—were named First Deputy Premiers. The first evidence of the expected intraparty struggle for power was revealed by the announcement on July 10, 1953, of the purging of Beria. He was executed on Dec. 23, 1953. His demise was accompanied by a rise in importance of N. S. Khrushchev, First Secretary of the Communist party. On Feb. 8, 1955, Malenkov was demoted and replaced as Premier by Bulganin, who was formerly Defense Minister. In July 1957 Khrushchev climaxed his rise to power by removing Molotov, Malenkov, Kaganovich and several others from the governing group.

GOVERNMENT. Under the Constitution of 1936, the Soviet Union is "a Socialist State of Workers and Peasants" whose highest organ is the Supreme Council of the Union, which exercises legislative authority. It consists of two co-equal Houses—the Council of Nationalities, in which each constituent republic has 25 representatives, each autonomous republic 11, each autonomous oblast five, and each national okrug one (total 639); and the Council of the Union, elected on a nationwide basis with one representative for each 300,000 of population (total membership 708). All representatives are elected for four-year terms; the last election was held on Mar. 14, 1954. Elections amount to a blanket endorsement (or rejection) of a single list of candidates already nominated by the Communist party, youth organizations, collective farms and trade unions. The only election in the Western sense of the word takes place in the selection of the nominees by these groups. All citizens over the age of 18 are enfranchised.

The Presidium of the Supreme Council acts as a directive body between the sessions of the Supreme Council. It has a Chairman (sometimes referred to as the Soviet President), 15 Vice Chairmen (one for each constituent republic), a Secretary and 15 members, all elected by the Supreme Council.

Details concerning the constituent republics of the U.S.S.R. are as follows:

Republic and capital	Area sq. mi.	Population Est. April 1956* (thousands)
Russian S.F.S.R. (Moscow)	6,592,443†	113,200†
Ukraine (Kiev)	232,618	40,600
Kazakhstan (Alma Ata)	1,063,242	8,500
Byelorussia (Minsk)	80,154	8,000
Uzbekistan (Tash- kent)	157,336	7,300
Georgia (Tbilisi)	29,488	4,000
Azerbaijan (Baku)	33,089	3,400
Lithuania (Vilnius)	25,174	2,700
Moldavia (Chisinau)	13,050	2,700
Latvia (Riga)	24,903	2,000
Kirghizia (Frunze)	76,023	1,900
Tadzhikistan (Sta- linabad)	55,058	1,800
Armenia (Erivan)	11,506	1,600
Turkmenistan (Ash- khabad)	187,181	1,400
Estonia (Tallinn)	17,413	1,100

* Official estimate of the Central Statistical Board of the Soviet Council of Ministers. † Including the Karelo-Finland S.S.R., incorporated into the R.S.F.S.R. in July 1956.

The highest executive and administrative power is exercised by the Council of Ministers (formerly People's Commissars) appointed by the Supreme Council and headed by a Chairman (Premier) and the Vice Chairmen. It issues decrees and executive orders on the basis of laws in operation and supervises their execution. The administrative machinery is necessarily vast and complicated, since it is responsible not only for the ordinary administrative functions of government, but also for operation of enterprises.

Postwar territorial acquisitions include the Carpatho-Ukraine (12,617 sq. mi.) obtained from Czechoslovakia June 29, 1945, incorporated into the Ukrainian S.S.R.; the Republic of Tannu Tuva in central Asia (64,000 sq. mi.) incorporated early in 1945 into the R.S.F.S.R.; Karafuto or southern Sakhalin (13,935 sq. mi.) and the Kurile Islands (3,944 sq. mi.), occupied by Soviet troops in Aug., 1945, and incorporated into the R.S.F.S.R.; the northern part of eastern Prussia (about 7,000 sq. mi.), placed under *de facto* Soviet administration at the Potsdam Conference and incorporated into R.S.F.S.R.; the Petsamo district of Finland, obtained *de jure* under the 1947 treaty and incorporated into the R.S.F.S.R.; and Poland east of the Curzon Line (69,860 sq. mi.), under terms of the

Soviet-Polish treaty of Aug. 16, 1945, incorporated into the Ukrainian and Byelorussian S.S.R.'s.

COMMUNIST PARTY. The only political party permitted to exist in the Soviet Union is the All-Union Communist party, which claimed 7,215,505 members in Feb. 1956. Its organization parallels the entire governmental and economic structure of the country and guides all important action through instructions from the central organs to party members who occupy most of the important political and economic positions. Its highest organ is the All-Union Party Congress, which meets irregularly. The Congress elects a Central Committee (133 members and 122 alternates), which in turn elects (1) an executive body (Presidium), (2) a Secretariat headed by a First Secretary (N. S. Khrushchev) and (3) a Committee of Party Control.

Members of the Presidium of the Central Committee following its reorganization in July 1957 were N. S. Khrushchev, N. A. Bulganin, K. E. Voroshilov, A. I. Mikoyan, A. I. Kirichenko, M. A. Suslov, A. B. Aristov, N. I. Byelayer, L. I. Brezhnev, Mme. E. A. Furtseva, N. G. Ignatov, A. L. Kozlov, Otto Kuusinen, N. M. Shvernik, G. K. Zhukov; candidate members, N. A. Mukhlitdinov, P. N. Pospelov, D. S. Korotchenko, J. E. Kalnberzin, A. P. Kirilenko, A. N. Kosygin, K. T. Mazurov, V. P. Mazavanadze, M. G. Pervukhin.

DEFENSE. The land, air and sea forces are under control of the Defense Ministry. Military service is compulsory; the initial training period varies from 2 to 5 years. The armed forces, which were estimated to have reached a peak of more than 15,000,000 men in 1945, numbered between 4,350,000 and 4,600,000 men in 1956, and were believed to have been reduced to approximately 3,400,000 by 1957. The strength of the army, including MVD and MGN troops (secret police organizations with paramilitary formations), was between 2,800,000 and 3,200,000 in 1956. The air force had between 750,000 and 800,000 men and 20,000 planes, including advanced models of jet fighters and bombers. The navy had between 600,000 and 750,000 men.

Information about the Red fleet is as vague as that about the army and air force. In Dec. 1956 it was believed to have 3 battleships, 32 cruisers, 150 destroyers, 250 frigates and escort vessels, 475 submarines, and many coastal and river craft, patrol vessels, minesweepers and various other small ancillary craft. Naval construction was emphasized in postwar five-year plans. **SOCIAL AND ECONOMIC CONDITIONS.** **Education.** The school system throughout the country is based upon uniform text books and the same syllabus, although a number of hours are allowed for native language, literature and history in the

non-Russian schools. All schools are state controlled, and compulsory education begins at the age of seven. Coeducation is being abolished and separate schools established for boys and girls. The boys' curriculum stresses military training; the girls', housework. Enrollment in primary and secondary schools in 1954-55 was 39,000,000. Under the Defense Ministry are the Suvorov military schools, established for the training of future officers. In 1955-56, 765 institutions of higher learning had 1,870,000 students, including 1,230,000 taking correspondence courses. Literacy in Russia was estimated at over 90% in 1950.

Agriculture. Formerly an agricultural country, the Soviet Union has grown since about 1920 into an industrial-agricultural power, with agriculture making great advances at the same time. The total area under cultivation was 259,500,000 acres in 1913, 291,600,000 acres in 1929, 361,361,000 acres in 1950 and 458,900,000 acres in 1955.

The Union's diverse climate permits the growing of the most varied crops, ranging from the temperate to the subtropical. Under the fourth Five-Year Plan, grain production increased to 124,700,000 metric tons in 1950 (a 5% increase over the pre-war average) and was to have been increased to 187,000,000 tons under the fifth Five-Year Plan (1951-55). This target was not reached, however, and the 1955 crop probably did not exceed 150,000,000 tons. Moreover, that figure represented the standing crop; the amount actually harvested and made available for consumption was placed at 103,000,000 tons as compared with 79,800,000 tons in 1950.

Large increases in the production of other crops were projected, and in many cases attained, under the fourth and fifth Five-Year Plans; and further increases were projected under the sixth Five-Year Plan (1956-60).

The progress of the livestock industry during the fifth Five-Year Plan was particularly disappointing.

Industry. Almost all industry in the Soviet Union is carried on by organizations owned or controlled by the state. Industrialization of the country has been a major objective of its leaders. Completion of the first two Five-Year Plans (1928-32, 1933-37) and of most of the third (1937-42) saw a great increase in the volume and versatility of Soviet industry.

The large-scale evacuation of plants to the East and the construction of new plants there during World War II, coupled with the eastward orientation of industry prior to the war, has shifted the balance to newly developed regions in Central Asia and Siberia from the Moscow-Leningrad area and the Ukraine. The new regions are now the center of Soviet industrial power,

accounting for almost all magnesium and aluminum production, and more than 60 per cent of the pig iron and steel production. The production of consumers' goods continues to be subordinate to the production of heavy capital equipment.

Large increases in production were reported under the fourth and fifth Five-Year Plans and further increases were projected under the sixth Five-Year Plan. The following table shows production of key items in 1940 and 1956 and planned production in 1960, in thousands of metric tons:

	1940 Actual	1956 Actual	1960 Target
Pig iron	14,900	35,800	53,000
Steel	18,300	48,600	68,300
Rolled metal	13,100	37,800	52,700
Cement	5,700	24,900	55,000
Cotton textiles	3,954*	5,500*	7,270*
Motor vehicles	145†	465†	650†
Tractors	32‡	184‡	322‡
Electricity	48‡	192‡	320‡

* Millions of meters. † Thousands of units. ‡ Billions of kw.h.

Employment in 1955 totaled 48,400,000 (31,200,000 in 1940) of whom 17,400,000 (11,000,000 in 1940) were employed in industry.

ANIMAL INDUSTRY (millions of head)

	1941*	1951*	1955†
Cattle	54.5	57.1	67.1
Cows	27.8	24.3	29.2
Hogs	27.5	24.4	52.2
Sheep	79.9	82.6	125.0
Goats	11.7	16.4	17.6

* Jan. 1. † Oct. 1.

Foreign Trade. Soviet foreign trade is a state monopoly, and foreign goods are purchased in accordance with an over-all plan conducted under the supervision of the Foreign Trade Ministry.

No complete trade statistics have been issued since 1938. The U. N. Economic Commission for Europe estimated total trade (exports and imports) at \$6,250,000,000 in 1954. Trade with countries of the Communist group totaled \$4,900,000,000, including \$1,100,000,000 with eastern Germany, \$720,000,000 with Czechoslovakia and \$660,000,000 with Poland.

According to official reports, the main exports in 1955 were machines and equipment 22.1%; metals 15.2%; cotton 11.3%; grain 10.3% and petroleum and products 6.4%; chief imports, machines and equipment 33.0%; textile raw materials 6.0%; metals 5.3%; ores and concentrates 4.2% and meat 4.2%.

Communications. According to *Lloyd's Register of Shipping*, the merchant marine on June 30, 1956, had 1,228 ships (100 tons and over) of 2,635,961 gross tons. Merchant ship construction has been subordinated to naval construction under the postwar five-year plans. The principal ports are

Leningrad on the Gulf of Finland, Murmansk and Archangel on the Arctic Ocean and White Sea, respectively; Vladivostok on the Sea of Japan; and the Black Sea ports of Odessa, Sevastopol, Novorossisk and Batum. River and canal transport is extremely important. In 1950 there were about 75,000 miles of navigable rivers and canals.

Railway mileage was officially placed at 74,955 in 1955, over one-third double-tracked. In that year railways carried 1,641,400,000 passengers and 1,267,000,000 metric tons of freight. Under the sixth Five-Year Plan, over 4,000 mi. of new track were to be constructed—twice that constructed during 1951–55—and 4,100 mi. of single track were to be doubletracked and over 5,000 mi. were to be electrified. Highway mileage (1945) totaled 849,520; hard-surfaced roads totaled 128,500 in 1955.

Air traffic is assuming great importance, especially in the central Asiatic portion of the U.S.S.R. Prior to World War II, the network of air routes covered 69,845 miles; in 1950 the estimated length was 109,000 miles, over which some 2,000,000 passengers were carried (300,000 in 1938). Moscow is connected with the capitals of all the Union republics by air service. There are regular services to the Far East and Europe. *Finance.* Recent financial data are, in billions of roubles (budget estimates):

	1955	1956	1957
Revenue	590.2	592.8	614.8
Expenditure	563.5	569.6	603.8

The budget includes charges for the financing of industry, transportation, agriculture and commerce—items which ordinarily are handled through private channels in other countries.

NATURAL FEATURES AND RESOURCES;

CLIMATE. The U.S.S.R. is the largest unbroken political unit in the world, occupying more than one-seventh of the land surface of the globe. The greater part of its territory is a vast plain stretching from eastern Europe to the Pacific Ocean. This plain, relieved only occasionally by low mountain ranges (notably the Urals), consists of three zones running east and west: (1) the frozen marshy tundra of the Arctic; (2) the more temperate forest belt; and (3) the steppes or prairies to the south, which in southern Soviet Asia become sandy deserts. The topography is more varied in the South, particularly in the Caucasus between the Caspian and Black Seas, and in the Tien-Pamir mountain system bordering Afghanistan, Sinkiang and Mongolia. Mountains (Stanovoi and Kolyma) and great rivers (Amur, Yenisei, Lena) also break up the sweep of the plain in Siberia.

Minerals. The U.S.S.R. is probably the richest country in the world in mineral resources, containing deposits of almost

every known mineral. It ranks among the top producing nations in coal, chromite, iron ore, petroleum, gold, copper, manganese and other products. The richest mineral region is that of the Ural Mountains, which lacks only good coking coal. Total coal and lignite production in 1956 was officially reported at 430,000,000 metric tons and was to be increased to 593,000,000 metric tons by 1960. Petroleum production in 1956 was reported at 83,800,000 metric tons (about 590,000,000 barrels) and was to be increased to 135,000,000 tons by 1960. Iron ore output in 1956 was 78,000,000 tons. Unofficial production estimates for other minerals and metals included aluminum (1956), 485,000 short tons; copper (1956), 417,000 short tons; gold (1955), 9,000,000 oz.; lead (1956), 290,000 short tons; nickel (1956), 50,000 short tons; silver (1955), 25,000,000 oz.; zinc (1956), 336,000 short tons. Uranium deposits are known to exist in the Soviet Union.

Forests. With a forested area of about 2,500,000,000 acres, the U.S.S.R. possesses a large proportion of the world's timber reserves. Most of the forested area is in Siberia, but there are also valuable stands in the Caucasus. Plans were made late in 1948 for the planting of huge forest belts 60 to 90 mi. wide in the southern steppes to protect fertile food-producing areas from the dry winds of the central Asian and Caspian deserts. Cut timber production in 1955 was estimated at 197,000,000 cu. m.

Fisheries and Furs. The rivers, lakes and surrounding seas (except the Black Sea) are rich in fish; the catch in 1955 was estimated at 2,498,000 metric tons. The acquisition of former Japanese fisheries in Karafuto and the Kuriles greatly increased output of the Far Eastern fish industry. Trapping is an important secondary industry, especially in eastern Siberia.

Climate. The climate necessarily is varied, but for the most part is continental. In general the climate of the northern and central regions is characterized by long, cold winters and by summers which are shorter and cooler than those in the northern part of the United States. Siberia has the coldest winters in the world; the January average at Verkhoyansk is -59° . In the southern regions the climate varies between temperate and subtropical. The Uzbek, Turkmen and Kazakh S.S.R.'s are largely desert and semi-desert areas. In the central belt rainfall is fairly uniform, averaging about 15 inches east of the Urals and 20 inches to the west. In the tundra to the north it drops to about 8 inches and to 4 inches in the southern regions.

Average daily low temperature at Moscow is about 5° (high, 14°) in January, the coldest month; average daily high is 71° during July, the warmest month.

Uruguay (Republic)

(República Oriental del Uruguay)

Area: 68,369 square miles.

Population (est. 1954): 2,800,924 (1950: white, 89.1%; others, 10.9%).

Density per square mile: 41.0.

President of Federal Council (1957-58): Arturo Lezama.

Principal cities (est. 1954): Montevideo, 810,969 (capital); Mercedes, 44,900 (farming center); Salto, 44,900 (cattle raising); Paysandú, 44,000 (meat packing).

Monetary unit: Peso.

Language: Spanish.

Religion: Roman Catholic.

HISTORY. Juan Diaz de Solís, a Spaniard, discovered Uruguay in 1516, but the Portuguese were first to settle it when they founded Colonia in 1680. After a long struggle, Spain wrested the country from Portugal in 1778. Uruguay revolted against Spain in 1811, only to be conquered in 1816-20 by the Portuguese from Brazil. Independence was reasserted with Argentine help in 1825, and the republic was set up in 1830. There followed a long period of factional strife between two groups still in existence at the present time—the Blancos and the Colorados.

GOVERNMENT AND DEFENSE. Under the 1934 Constitution, as amended in 1951, the executive power is exercised by a Federal Council of 9 members, 6 of the majority and 3 of the minority party, normally elected for 4-year terms. The presidency of the Council is rotated annually. There is a bicameral Congress composed of a 99-member Chamber of Deputies and a 31-member Senate elected for 4 years. All literate citizens of Uruguay may vote, including women, who may also sit in congress.

Service in the army is voluntary, but national guard service is compulsory in wartime. There is a police force of about 5,500, and a small air force. The navy has 2 frigates, 4 patrol vessels and several smaller craft.

SOCIAL AND ECONOMIC CONDITIONS. Uruguay's illiteracy rate is 35 per cent; primary education is compulsory, and all education is free. In 1953, there were 1,827 primary schools with 272,721 pupils and (1951) 115 secondary schools with 37,858 students. The university at Montevideo had 11,603 students in 1951. Uruguay's high percentage of white population includes many foreign-born, mostly Italian and Spanish.

Cattle, sheep, meat and wool dominate the Uruguayan economy. With nearly 80 per cent of its grassy land devoted to grazing, there were in 1956, 22,900,000 sheep and 7,305,000 cattle. Wool production in 1956 was 53,000 metric tons, clean. With only about 5 per cent of the land cultivated, a third of this grows wheat, the chief crop (1956-57: 750,000 metric

tons). Other crops are corn, flax for linseed, oats, potatoes, beans, fruits, tobacco, alfalfa and grapes. Wine production for 1956 was about 26,000,000 U. S. gallons.

Uruguay slaughters more than two million head of cattle and sheep a year, and meat processing is the largest manufacturing industry. There are many modern plants for chilling or freezing meat, and plants for liquid extract of beef.

During World War II Uruguay doubled its foreign trade, and most of the increase went to the U. S. Recent data are as follows (in millions of U. S. dollars):

	1954	1955	1956
Exports	248.9	183.1	211.1
Imports	274.4	225.0	205.8

In value, wool was the chief export (62%) in 1956, followed by wheat (14%), meat (9%) and hides (6%). Chief customers were the Netherlands (24%), the U. S. (12%) and Brazil (11%); leading suppliers, the U. S. (16%); Brazil (12%), and Western Germany (7%). Leading imports included machinery, vehicles, gasoline, textiles and sugar.

Railway mileage in 1954 totaled 1,928. Prior to 1948, 90 per cent was British-owned, but in that year the government purchased complete interest. Road mileage was 26,000 in 1955, of which 3,100 mi. were paved national roads. On June 30, 1956, the merchant marine had 42 vessels (100 tons and over) of 73,423 gross tons.

The 1957 budget provided for expenditure of 674,000,000 pesos. The funded public debt on July 31, 1956, was 1,212,000,000 pesos.

NATURAL FEATURES; CLIMATE. Uruguay, a low rolling plain in the south and a low plateau in the north, has a 120-mile Atlantic shore line, a 235-mile frontage on the Río de la Plata, and 270 miles on the Uruguay River, its western boundary. The climate is good. Average summer temperature in January and February is 71°, and average winter temperature in July is 50°. Frost is almost unknown. Average rainfall is 35 inches, heaviest in the autumn.

Vatican City State

(Stato Città Vaticana)

Area: 108.7 acres.

Population (est. 1952): 947 (Italian, 85%; Swiss and others, 15%).

Ruler: The Supreme Pontiff, Pius XII.

Monetary unit: Lira.

Languages: Latin, Italian.

Religion: Roman Catholic.

The Vatican City State, sovereign and independent, is situated on the Vatican hill on the right bank of the Tiber in northwest Rome. The area has been intimately associated with the history of the Roman Catholic Church since the time of

the martyrdom of St. Peter. From it the Pope exercised temporal sway for many centuries over a large part of central Italy; in 1859 the Papal States comprised an area of some 17,000 square miles. During the struggle for Italian unification, from 1860 to 1870, most of this area became part of Italy.

By an Italian law of May 13, 1871, the temporal power of the Pope was abrogated, and the territory of the Papacy was confined to the Vatican and Lateran palaces and the Villa of Castel Gandolfo. The Popes consistently refused to recognize this arrangement, and by the Lateran Treaty of Feb. 11, 1929, between the Vatican and the Kingdom of Italy, the exclusive dominion and sovereign jurisdiction of the Holy See over the city of the Vatican was again recognized, thus restoring the Pope's temporal authority over the area. Accompanying the treaty were conventions regulating the position of the Catholic Church in Italy and providing for reimbursement to the Vatican in final settlement of the claims of the Holy See against Italy for the loss of temporal power in 1870-71.

The Supreme Pontiff is Pius XII (Eugenio Pacelli), born at Rome, March 2, 1876, proclaimed cardinal in 1929, and elected Pope on March 2, 1939. He was crowned on March 12.

The Pope has full legal, executive and judicial powers. Executive power over the area is in the hands of a Governor appointed by the Pope and exclusively responsible to him.

The College of Cardinals is the Pope's chief advisory body, and upon his death the cardinals elect his successor for life. The cardinals themselves are created for life by the Pope. When complete, the College consists of 70 members.

The central administration of the Roman Catholic Church throughout the world is carried on in the Vatican by 12 congregations, 3 tribunals and 4 offices.

In its diplomatic relations with foreign countries, the Vatican is represented by the Papal Secretary of State. In 1956 the Vatican maintained diplomatic relations with 40 states through its papal-nuncios (ambassadors) and inter-nuncios (ministers). Apostolic Delegates, representatives without accredited rank, are maintained in a number of other countries throughout the world.

The Vatican has its own railway station, postal facilities, coinage, newspaper, radio and television system. In addition to the Vatican itself, which includes St. Peter's Square, extraterritorial rights are enjoyed in 13 buildings in the city of Rome outside Vatican City.

Venezuela (Republic)

(República de Venezuela)

Area: 352,143 square miles.

Population (est. Dec. 1955): 6,000,000* (mestizo, 65%; white, 20%; Negro, 8%; Indian, 7%).

Density per square mile: 17.0*

President: Marcos Pérez Jiménez.

Principal cities (est. Dec. 31, 1956): Caracas, 749,303 (capital); Maracaibo, 389,723 (oil); Barquisimeto, 164,908 (sugar, coffee, mining); Valencia, 124,376 (farming center).

Monetary unit: Bolívar.

Language: Spanish.

Religion: Roman Catholic.

* Excludes tribal Indians.

HISTORY. Venezuela, a third larger than Texas, has a stormy political past and the distinction of being the world's second greatest producer of oil, outranked only by the U. S. Simón Bolívar, who led the liberation of much of the continent from Spain, was born in Caracas.

Columbus discovered Venezuela on his third voyage in 1498. A subsequent Spanish explorer, for reasons of his own, gave the country its name, meaning "Little Venice." There were no important settlements until Caracas was founded in 1567. With Bolívar taking part, Venezuela was one of the first South American colonies to revolt against Spain in 1810, but it was not until 1821 that independence was won. Federated at first with Colombia and Ecuador, the country set up a republic in 1830, and then sank for many decades into a condition of revolt, dictatorship and corruption. From 1908 to 1935, General Juan Vicente Gómez ruled tyrannically over the nation, picking satellites to alternate with him in the presidential palace.

Dr. Rómulo Betancourt and his party, the liberal Acción Democrática, won 137 out of 160 seats in an election held Oct. 27, 1946, for a constituent assembly to draft a new Constitution. The well-known writer, Rómulo Gallegos, easily won the presidential election held in 1947, as the candidate of Acción Democrática.

On Nov. 24, 1948, the Venezuelan army ousted Gallegos and established a military junta which was reconstituted on Nov. 27, 1950. Following elections for a constituent assembly on Nov. 30, 1952, the junta presented its resignation to the army, which named Col. Marcos Pérez Jiménez as provisional President on Dec. 2, 1952.

GOVERNMENT AND DEFENSE. Venezuela comprises 20 states, a federal district and two territories. Under the 1953 Constitution (Venezuela's 21st) the Congress consists of a 42-member Senate elected by state legislatures and a 104-member Chamber of Deputies elected directly. The President is elected by popular vote for five years.

Military service is compulsory, with a one- to three-year initial training period. The army has about 10,000 men. The navy has 3 destroyers, 6 frigates. There is a small air force.

SOCIAL AND ECONOMIC CONDITIONS. Illiteracy in 1949 was estimated at 60 per cent. Primary education between ages of 7 and 14 is compulsory. In Dec. 1954, 7,014 primary schools reported 608,976 pupils enrolled; 197 secondary and special schools had 33,481. There are five universities—Los Andes at Mérida, Central University at Caracas, Zulia at Maracaibo, and two Catholic universities at Caracas.

Agriculture engages the majority of the population, but production has failed to keep pace with the food needs of the rapidly increasing population. The principal crop is coffee, grown on 60,000 plantations on the slopes of the coastal mountains. Production in 1956-57 was 800,000 bags of 132 lb. each. Exports of cacao in 1956 were 18,532 metric tons. Other important crops are sugar, tobacco, cotton, corn, wheat and tropical fruits. Stockraising, which is centered east of Lake Maracaibo, and on the llanos, is important.

There are few industries, the most important being woodworking, cotton textiles and tobacco products. Electric power is plentiful, and a law of 1943 prepared the way for the beginning of an oil refining industry. In 1956, 228,260,000 bbl. of crude petroleum were refined and 3,391,751,000 cigarettes and 1,451,171 metric tons of cement were produced. Venezuela's first steel plant is under construction near Puerto Ordaz.

Oil, most of which is found on the northwest shore of Lake Maracaibo, is by far the dominant factor in the economy. It accounts for 95 per cent of exports, gives the country a big foreign trade balance and a treasury surplus. Recent foreign trade statistics, in millions of bolívars:

	1954	1955	1956
Exports	5,661.0	6,408.7	7,114.2
Imports	2,745.8	2,959.6	3,438.4

In 1955 the U. S. supplied over 60% of the imports, which included for the most part machinery and equipment, metals and manufactures, foodstuffs, beverages and textiles. In addition to petroleum and products (93%), chief exports in 1956 were iron ore, coffee and cacao. Most of the crude oil goes to the U. S. via the islands of Curaçao and Aruba, refining centers in the West Indies.

In 1953 there were 10,243 mi. of all-weather roads. Public railways (1955) totaled about 544 mi., divided among a number of disconnected lines of varying gauges.

The 1957-58 budget was balanced initially at 2,800,000,000 bolívars. There is no foreign debt.

NATURAL FEATURES AND RESOURCES; CLIMATE. An unusual setting of mountain systems breaks Venezuela into four distinct areas: (1) the Maracaibo lowlands; (2) the mountainous region in the north and northwest; (3) the Orinoco basin with the llanos (vast grass-covered plains) on its northern border and great forest areas in the south and southeast; (4) the Guayana highland, south of the Orinoco, accounting for nearly half the national territory. About 80 per cent of Venezuela is drained by the Orinoco and its 400 tributaries.

Oil production increased from 116,000,000 barrels in 1931 to 889,180,000 barrels in 1956 (1955: 787,382,000 barrels). In addition to oil, Venezuela has gold mines in the region southwest of the Orinoco delta. Output in 1956 was 69,800 troy oz. Of lesser importance are manganese, bauxite, coal, copper, tin, asbestos and asphalt. Diamond production in 1956 was 93,833 carats. A subsidiary of Bethlehem Steel Corp. began the mining of iron ore in the El Pao area south of the Orinoco river in 1950, while a U. S. Steel Corp. subsidiary is exploiting a rich "iron mountain" south of Ciudad Bolívar on the Orinoco. Production of iron ore in 1956 totaled 11,014,784 metric tons (1955: 8,439,451 tons); average metal content is 65%.

The climate is tropical and unhealthy except where modified by altitude; it approaches the mild temperate in the higher western mountains. Most rainfall occurs between April and October, and the rest of the year is dry. At La Guaira, the mean annual temperature is 81°, at Caracas, 70°, at Cumaná, 83°.

Vietnam

Vietnam ("Land of the South") was divided at the Geneva conference in July 1954 along the 17th parallel, the northern part going to the Communist-dominated Vietminh. Elections for a unified government were to be held within 2 years. There appeared to be little likelihood in the following years that such elections actually would be held.

After World War II, the Republic of Vietnam—at that time comprising Tongking and northern Annam—was recognized by the French as a free state within the Indo-Chinese Federation and the French Union. The French refusal to accede to demands of Vietnam leaders headed by Dr. Ho Chi-minh, a Communist, for the accession of Cochín-China to the new state and the continued landing of French troops led to the outbreak of hostilities with Ho Chi-minh's Vietminh in Dec. 1946.

Amid the hostilities, protracted negotiations ensued regarding the future legal status of Indo-China. France installed

Bao Dai, former Emperor of Annam, as head of a new French-supported state of Vietnam (to which Cochín-China acceded in 1949) and under agreements concluded with Vietnam and subsequently with Laos and Cambodia, all of which were finally ratified in 1950, the three states were recognized with some reservations as independent associated states within the French Union.

Meanwhile, the Vietminh forces, organized as the Democratic Republic of Vietnam and recognized by the U.S.S.R., Communist China and other states of the Soviet bloc, acquired a hold on most of Vietnam outside the large urban centers and heavily settled delta areas which, with the aid of Communist Chinese logistical support, they held and even extended despite persistent pressure by French and associated troops.

Republic of Vietnam

Area: 65,726 square miles.

Population (est. 1956): 12,366,000.

Density per square mile: 188.1.

President: Ngo Dinh Diem.

Principal cities (est. 1956): Saigon-Cholon, 1,794,360 (capital, chief port); Tourane, 100,978 (port, naval base); Hue, 90,682 (rice, sawmills).

Monetary unit: Piastre.*

Languages: Annamese, French.

Religions: Buddhist, Christian.

* 1 piastre = 10 French metropolitan francs.

The young republic of Vietnam comprises the southern part of the former state of Viêt-Nam and includes all of the former state of Cochín-China and the southern part of Annam. It is a member of the French Union, but its new status has not been fully defined.

Considerable discord and unrest prevailed after the partition. In a referendum held on Oct. 23, 1955, the people voted overwhelmingly for Ngo Dinh Diem as Chief of State. Diem proclaimed a republic on Oct. 26 and became its first President. His supporters won most of the seats in the first National Assembly elections held on March 5, 1956.

About 90% of the people derive their livelihood from agriculture, most of them being employed in growing rice and rubber. The Mékong delta is one of the leading rice-exporting areas in the world. Production in 1956 included rice, 3,514,620 metric tons; rubber, 70,235 tons. Other crops are tea, coffee, maize, tobacco, kapok and pepper. Water buffalo are used chiefly for draft purposes.

Factories, centered in Saigon-Cholon, are small and process goods for local consumption and agricultural and forest products for export. Most important are the rice and sawmills.

In 1956 exports totaled 1,358,836,000 piastres; imports, 7,617,758,000 piastres. The chief export was rubber (86%). Leading customers were France (67%), the U. S. (19%) and Cambodia (4%); leading suppliers, the U. S. (28%), Japan (26%) and France (23%).

Rivers and canals are an important means of transport. A railway runs up the coast from Saigon, and there is a good network of highways.

The area consists essentially of the vast Mékong river delta and to the north, part of the Annamese cordillera and the adjoining coastal plain.

Forests are mostly of secondary growth and of limited commercial value, except for mangrove stands in the extreme south. Mineral resources are limited. Coal is most important; some deposits of phosphates and gold exist.

The climate is monsoonal, with nearly all the very heavy rainfall between May and October.

Democratic Republic of Vietnam

Area: 63,360 square miles.

Population (est. 1955): 12,500,000.

Density per square mile: 197.3.

President: Ho Chi-minh.

Premier: Pham Van-dong.

Principal cities (est. 1953): Hanoi, 297,900 (capital); Haiphong, 188,600 (chief port).

Monetary unit: Dong.

Languages: Annamese, Chinese, French.

Religions: Buddhist, Christian.

The republic of Vietnam comprises the northern part of the former state of Viêt-Nam and includes all of the former state of Tongking and the northern part of Annam. It is no longer a part of the French Union. The government of the republic is organized along typical Communist lines.

The economy is based on agriculture and mining. The chief crop is rice, grown chiefly in the Red River delta and supplying in most years the requirements of the population. Other crops are maize, arrowroot, sugar cane, tea, coffee, tobacco and sweet potatoes. Industry is not highly developed. There are important coal mines in the Quangyen basin near Haiphong. Tin, limestone and gold also are produced. A railway runs south from Hanoi along the coast and in the north connects through Langson with the railway network of Communist China.

The area consists principally of the Red River delta in the north and the northern coastal plain of Annam. The climate is similar to that of south Vietnam, although the winters are cooler and the precipitation greater.

Yemen (Kingdom)

Area: c. 75,290 square miles.
 Population (est. 1953): 4,500,000.
 Density per square mile: c. 59.8.
 King: Ahmad ibn Yahya Hamid ed-Din.
 Premier: Seif ul-Islam el-Badr.
 Principal cities (est.): Sana, 50,000 (capital); Hodeida, 30,000 (chief port); Taiz, 12,000 (seat of government).
 Monetary unit: Riyal.
 Language: Arabic.
 Religion: Moslem.

The history of Yemen, in the southwest Arabian peninsula fronting the Red Sea, dates back to the Minaean kingdom (1,200-650 B.C.). It accepted Islam in 628 A.D. and in the 10th century came under the control of the Rassite dynasty of the Zaidi sect, which still rules. The Turks occupied the area from 1538 to 1630 and from 1849 to 1918. Its sovereign status was confirmed by treaties signed with Saudi Arabia and Britain in 1934. Yemen was admitted to United Nations membership in 1947.

Yemen is an absolute monarchy. The present ruler came to the throne in 1948, after insurgents murdered his father. Nearly all the population of the country is settled and nomadism prevails only in the lowlands.

Unlike most of Arabia, the Yemeni highlands are well adapted to agriculture; they produce grain, fruit, vegetables and Mocha coffee. Stock raising flourishes, particularly in the lowlands. Exports include coffee and hides.

The narrow coastal plain rises sharply to a maritime range and central plateau (highest point, 12,336 ft.). Winter temperatures in the highlands fall below 40° F. and summers are cool.

Yugoslavia (Republic)

(Federaciona Narodna Republika)

Jugoslaviija)

Area: 98,700 square miles.
 Population (est. 1956): 17,799,000 (1953: Serbian, 41.7%; Croat, 23.5%; Slovene, 8.8%; Macedonian, 5.3%; Albanian, 4.4%; others, 16.3%).

Density per square mile: 180.3.

President: Josip Broz (Tito).

Principal cities (census 1953): Belgrade (Beograd), 469,988 (capital); Zagreb, 350,452 (Croat commercial center); Ljubljana, 138,211 (Slovenian industrial center); Sarajevo, 135,657 (Bosnian manufacturing center); Skopje, 121,551 (capital, Macedonia); Subotica, 115,402 (wheat).

Monetary unit: Dinar.

Languages: Serbo-Croat, Slovene, Macedonian (all official).

Religions (est. 1952): Greek Orthodox, 49.6%; Roman Catholic, 36.8%; Moslem, 12.5%; others, 1.1%.

HISTORY. Yugoslavia, twice the size of Pennsylvania and fronting on the Adriatic

Sea opposite Italy, was formed in 1919 out of some of Europe's oldest trouble spots in the Balkans. After a brief and unstable history of 25 years, it emerged from World War II as a Russian satellite. World amazement, however, followed an attack made June 28, 1948, by the Soviet-dominated Cominform on Marshal Tito and the Yugoslav Communist party for inspiring a "hateful" policy against the Soviet Union and retreating from the Communist line in foreign and domestic policies. Unlike other officials similarly attacked by Soviet organs in the past, Tito denounced the Cominform's action and still continued in full power despite further repeated attacks on him by the Cominform and members of the Soviet east European bloc. On September 29, 1949, the Soviet Union denounced its 1945 treaty of friendship with Yugoslavia. On June 20, 1956, however, following a visit by Tito to Moscow, the U.S.S.R. and Yugoslavia signed a pact of renewed friendship.

The 1919 components of Yugoslavia were the old kingdoms of Serbia and Montenegro, and the following: Bosnia-Herzegovina, formerly administered jointly by Austria and Hungary; Croatia-Slavonia, which had had limited autonomy under Hungary; and Slovenia and Dalmatia, formerly administered by Austria.

Alexander I, son of King Peter of Serbia, became the first King of the new country on Aug. 16, 1921. His reign was a rocky one because the Croats, under Dr. Stephen Radić, unceasingly sought autonomy. Finally, a Croat assassinated Alexander in Marseilles, France, in 1934, and since his son Peter was a minor, a regency was set up under Prince Paul, the new King's uncle.

After pursuing an increasingly pro-Axis policy under the regent, Yugoslavia signed the Axis Pact on March 25, 1941; this caused the overthrow of the government two days later. On April 6 the country was invaded by the Nazis and was speedily occupied. While the King and government fled to the Near East and later to London, Yugoslavia was divided into German, Italian, Hungarian and Bulgarian occupation zones. Puppet regimes were established in Croatia and Serbia.

Inside Yugoslavia, the Axis occupation was fought by two guerrilla armies—the Chetniks under Draja Mihailović, who supported the monarchy; and the Partisans under Marshal Tito (Josip Broz), who leaned toward Russia. These two groups fought not only the Germans, but also each other. In November 1943, Tito established an Executive National Committee of Liberation to act as a provisional government, thus repudiating King Peter, who was in exile.

In the elections of Nov. 11, 1945, Tito's forces won overwhelmingly, partly because

the monarchist factions boycotted the balloting. Convening on Nov. 29, the new Assembly abolished the monarchy and set up the Federal People's Republic of Yugoslavia. Tito was Prime Minister, and his government won recognition from Britain and the United States.

The Tito government embarked upon an internal policy of ruthless oppression and elimination of opposition factions, including the summary trial and execution of Mikhailovic in 1946. In April 1947, it initiated a five-year plan for agriculture and industry.

Externally the government pursued, until 1948, its uncompromising support of Moscow, as manifested by Yugoslav aid to antigovernment Greek guerrillas, which had led to a U. N. inquiry in 1947. Soviet support enabled the nation to secure most of Italian Istria under the 1947 peace treaty, but efforts to secure sovereignty over the key port of Trieste were unsuccessful. Zone B of the former free territory of Trieste was, however, transferred to Yugoslavia in Oct. 1954.

Tito was elected President of Yugoslavia under the new Constitution on Jan. 14, 1953. In 1957 he adopted a policy of renewed collaboration with the U.S.S.R. and the Communist bloc.

GOVERNMENT AND DEFENSE. Under the 1953 Constitution, Yugoslavia is a federal republic composed of six units—Serbia (which includes the autonomous province of Vojvodina and the autonomous region of Kosovo-Metohija), Croatia, Slovenia, Bosnia-Herzegovina, Macedonia and Montenegro. Executive power is vested in the Federal Executive Council of 30 to 45 members elected by and from the Federal Assembly, and presided over by the President of the republic, who is elected by and is responsible to the Federal Assembly. The Assembly consists of (1) a Federal Council of 352 members, most of whom are popularly elected and (2) a Council of Producers, elected by organized producing citizens in agriculture, industry and the crafts. Actual administration is carried on by 5 State Secretaries responsible to the Executive Council. Actual control of the country remains with the Yugoslav Communist party.

The army, based upon the National Liberation Army and partisan detachments which at one time had a strength of about 800,000, had only a fraction of that strength in 1957. Equipment generally is poor. The navy was believed to include 2 submarines and 4 escort vessels in Dec. 1956.

SOCIAL AND ECONOMIC CONDITIONS. Education on the elementary level is compulsory and free. Illiteracy (10 years and over) was 25% in 1953. In 1953-54 there were 14,044 elementary schools with 1,402,-

000 pupils, 2,106 secondary schools with 523,000 pupils and 1,074 technical schools with 140,000 students. The various universities and technical colleges had a total enrollment of 59,571 in 1953-54.

Agriculture occupies about 80 per cent of the population. The principal crops are corn, wheat, sugar beets, hemp, hops, opium (in Macedonia) and tobacco (chiefly in Macedonia and Herzegovina). Excellent wines are produced in Dalmatia and Herzegovina and along the Danube. Recent crop production data are as follows, in thousands of metric tons:

	1954	1955*	1956*
Wheat	1,385	2,436	1,606
Maize	3,004	3,900	3,370
Sugar beets	1,249	1,380	1,200
Potatoes	1,876	2,260	2,190
Tobacco	29	42	...

* Provisional.

In 1956 there were 5,220,000 cattle, 11,518,000 sheep and 4,699,000 hogs. Wool production in 1956 was 10,000 metric tons, clean basis.

Manufactures are limited for the most part to consumers' goods. Legislation passed Dec. 5, 1946, nationalized all private economic enterprises, public works and industries in 42 branches of the national economy including mining, metallurgy, and all industries which process natural products. In 1956, 644,400 metric tons of pig iron and 886,800 tons of steel were produced.

Yugoslavia has only limited access to ports on the Adriatic because of the difficulty in crossing the coastal range with railways and highways. Waterways, especially the Danube, are important. The merchant marine in 1956 totaled 169 vessels (of over 100 tons) with a gross tonnage of 319,447. Railway mileage in 1954 was 7,200 and highway mileage 51,000.

Recent trade data are as follows (in billions of dinars):

	1954	1955	1956
Exports	72.11	76.98	97.0
Imports*	101.82	132.29	142.2

* Including imports in aid.

Leading customers in 1956 were western Germany (15%), Italy (14%) and the U.S.S.R. (13%); leading suppliers, the U. S. (27%), the U.S.S.R. (15%) and western Germany (10%). Chief exports in 1955 were sawn timber (13%), tobacco (6%) and pulpwood (3%).

The 1956 budget balanced revenue and expenditure at 212,500,000,000 dinars.

NATURAL FEATURES AND RESOURCES; CLIMATE. About half of Yugoslavia is mountainous. In the north, the Dinaric Alps rise abruptly from the sea and progress eastward as a barren limestone plateau called the Karst. Montenegro is a

jumbled mass of mountains, containing also some grassy slopes and fertile river valleys. Southern Serbia, too, is mountainous. A rich plain in the north and northeast, drained by the Danube, is the most fertile area of the country. The Danube and tributaries—the Drava, Sava and Morava—in the northeast are the principal rivers.

Yugoslavia is the Balkans' principal mineral producer. Production in 1956 was as follows, in metric tons: coal, 1,232,400; lignite, 15,864,000; iron ore (metal con-

tent 45%), 1,724,400; (1955) blister copper, 28,200; chromite, 126,200; bauxite, 791,000; manganese, 10,900; refined lead, 75,600; raw zinc, 13,700; silver, 291,000 oz. Uranium deposits have been reported.

On the Adriatic, Yugoslavia's climate is mild and Mediterranean, but in the interior the winters are cold and the summers hot. January temperatures in Belgrade average about 30°, and summer temperatures are usually in the 70's. Rainfall is heaviest throughout the country from October to January.

A record of later events may be found in the section: NEWS RECORD of 1957.

Principal Deserts of the World

Desert	Location	Approximate size	Appx. elevation, ft.
Atacama.....	North Chile.....	400 mi. long.....	7,000-13,500
Black Rock.....	Northwest Nevada.....	70 mi. long and in places 20 mi. wide, or about 1,000 sq. mi.	2,000-5,000
Colorado.....	Southeast California from San Geronio Pass to Gulf of California	200 mi. long and a maximum width of 50 mi.....	Few feet above to about 250 below sea level
Dasht-i-Kavir.....	Southeast of Caspian Sea in Iran...	2,800
Dasht-i-Lut.....	Northeast of Kerman in Iran.....	1,000
Gobi (Shamo or "Desert of Sand")	Covers most of Mongolia.....	800 by 400 mi., or at least 300,000 sq. mi.	3,000-5,000
Great Arabian.....	Most of Arabia.....	1,500 mi. long.....
Syrian (El Hamad)	North of 30° N. Latitude.....	1,850
Nefud (Red Desert)	South of Jauf.....	400 mi. long and average of 200 mi. wide.....	3,000
Dahna.....	Southeast of Nefud.....	400 by 30 mi.....
Rub' al Khali.....	South portion of Nejd.....
Great Australian.....	Western portion of Australia..... (Includes: Great Sandy; Gibson; Great Victoria; Arunta.)	About one-half the continent	600-1,000
Great Salt Lake.....	West of Great Salt Lake to Nevada-Utah line.	80 by 50 mi.....	4,500
Kalahari.....	South Africa between the Orange and Zambesi Rivers	400 by 600 mi., or about 120,000 sq. mi.....	Over 3,000
Kara Kum (Desert of Khiva or "Black Sands")	Southwest Turkestan south of Lake Aral	110,000 sq. mi.....
Kizil Kum.....	Central Turkestan southeast of Lake Aral	370 by 220 mi., or about 70,000 sq. mi.....	160 near Lake Aral to 2,000 in southeast
Mohave.....	North of Colorado Desert and south of Death Valley in southeast California	15,000 sq. mi.....	2,000
Painted Desert.....	Northeast Arizona.....	75 mi. wide.....	High plateau 5,000
Sahara.....	Northern states of Africa to about 15° N. Lat. and from Red Sea to the Atlantic Ocean	3,200 mi. greatest length along 20° N. Lat.; width varies from 800 to 1,400 mi. Area over 3,500,000 sq. mi.	440 below sea level to 11,000 above with an average elevation of 1,400-1,600
Libyan.....	East portion of the Sahara west of Nile	More than 500,000 sq. mi.....
Nubian.....	From Red Sea to great west bend of the Nile	2,500
Takla Makan.....	S. Central Sinkiang in Tarim Basin	700 mi. long.....
Thar (Indian).....	Chiefly Rajputana, India.....	About 300 mi. by 380 mi.....	About 500

Explorations and Discoveries

Africa

Country or place	Event	Explorer or discoverer	Date
Sierra Leone	Visited	Hanno, Carthaginian seaman	c. 520 B.C.
Congo River	Mouth discovered	Cão, Portuguese navigator	c. A.D. 1484
Cape of Good Hope	Doubled	Bartholomeu Diaz, Portuguese navigator	1488
Gambia River	Explored	Mungo Park, Scottish explorer	1795
Sahara Desert	Crossed	Denham and Clapperton, English explorers	1822-23
Zambezi River	Discovered	Livingstone, Scottish explorer	1851
Sudan	Explored	Barth, German explorer	1852-55
Victoria Falls	Discovered	Livingstone	1855
Lake Tanganyika	Discovered	Burton and Speke, British explorers	1858
Congo River	Traced	Stanley, British explorer	1877

Asia

Punjab (India)	Visited	Alexander the Great	327 B.C.
China	Visited	Marco Polo, Italian traveler	c. A.D. 1272
Tibet	Visited	Odoric, Italian monk	c. 1325
Southern China	Explored	Conti, Italian adventurer	c. 1440
India	Visited by Cape route	Vasco da Gama, Portuguese navigator	1498
Japan	Visited	St. Francis Xavier of Spain	1549
Arabia	Explored	Niebuhr, German explorer	1762
China	Explored	Richthofen, German scientist	1868
Mongolia	Explored	Przhevalsky, Russian explorer	1870-73
Central Asia	Explored	Hedin, Swedish scientist	1890-1908

Europe

Shetland Islands	Visited	Pytheas of Massilia (Marseille)	c. 325 B.C.
North Cape	Rounded	Ottar, Norwegian explorer	c. A.D. 870
Iceland	Colonized	Norwegian noblemen	c. 890-900

North America

Greenland	Colonized	Eric the Red, Norwegian navigator	c. A.D. 985
Labrador; Nova Scotia (?)	Discovered	Leif Ericsson, Norse explorer	1000
West Indies	Discovered	Christopher Columbus, Italian navigator	1492
North America	Coast discovered	John Cabot, for British	1497
Pacific Ocean	Discovered	Balboa, Spanish explorer	1513
Florida	Explored	Ponce de León, Spanish explorer	1513
Mexico	Conquered	Cortez, Spanish adventurer	1519
St. Lawrence River	Discovered	Cartier, French navigator	1534
Southwest U. S.	Explored	Coronado, Spanish explorer	1540-42
Colorado River	Discovered	Alarcón, Spanish explorer	1540
Mississippi River	Discovered	Hernando de Soto, Spanish explorer	1541
Frobisher Bay	Discovered	Frobisher, English seaman	1576
Maine Coast	Explored	Champlain, French explorer	1604
Jamestown, Va.	Settled	Smith, English colonist	1607
Hudson River	Explored	Hudson, English navigator	1609
Hudson Bay (Canada)	Discovered	Hudson	1610
Baffin Bay	Discovered	Baffin, English navigator	1616
Lake Michigan	Navigated	Nicolet, French explorer	1634
Arkansas River	Discovered	Marquette and Joliet, French explorers	1673
Mississippi River	Explored	LaSalle, French explorer	1682
Bering Strait	Discovered	Bering, Danish explorer	1728
Alaskan Coast	Sighted	Gvosdeff, Russian sailor	1731
Mackenzie River (Canada)	Discovered	Mackenzie, Scottish-Canadian explorer	1789
Northwest U. S.	Explored	Lewis and Clark	1804-06
Northeast Passage (Arctic Ocean)	Navigated	Nordenskiöld, Swedish explorer	1879
Greenland	Explored	Peary, American explorer	1892
Northwest Passage	Navigated	Amundsen, Norwegian explorer	1906

South America

Country or place	Event	Explorer or discoverer	Date
Continent	Visited	Columbus, Italian navigator	1498
Brazil	Discovered	Cabral, Portuguese explorer	1500
Peru	Conquered	Pizarro, Spanish explorer	1532-33
Amazon River	Explored	Orellana, Spanish explorer	1541
Cape Horn	Discovered	Schouten, Dutch navigator	1615

Oceania

New Guinea	Visited	Menezes, Portuguese explorer	1526
Australia	Visited	Jansz, Dutch explorer	1606
Tasmania	Visited	Tasman, Dutch navigator	1642
Australia	Explored	Sturt, English explorer	1828
Australia	Explored	Burke and Wills, Australian explorers	1861

Arctic, Antarctic and Miscellaneous

Ocean exploration	Expedition	Magellan's ships circumnavigated the globe	1519-22
Spitsbergen	Visited	Barents, Dutch navigator	1596
(Arctic Europe)			
Antarctic Circle	Crossed	Cook, English navigator	1773
Antarctica	Discovered	Palmer, U S. explorer (archipelago) and Bellingshausen, Russian navigator (mainland)	1820-21
Antarctica	Explored	Wilkes, American explorer	1840
North Pole	Discovered	Pearry, American explorer	1909
South Pole	Discovered	Amundsen, Norwegian explorer	1911

The Seven Wonders of the World

THE PYRAMIDS OF EGYPT

A group of three pyramids, *Khufu*, *Khafra* and *Menkaura* at Giza, outside modern Cairo, is often called the first wonder of the world; it is also the oldest and only surviving "wonder." The largest pyramid, built by Khufu (Cheops), had an original estimated height of 482 ft. (now approximately 450 ft.). The exact date of its construction is unknown and has been estimated as early as 4700 B.C. but is probably closer to 2900 B.C.

HANGING GARDENS OF BABYLON

Often listed as the second wonder, these gardens were supposedly built by Nebuchadnezzar about 600 B.C. to please his queen, Amuhia. They are also associated with the mythical Assyrian Queen, Semiramis. Archeologists surmise that the gardens were laid out atop a vaulted building, with provisions for raising water. The terraces were said to rise from 75 to 300 ft.

The Walls of Babylon, also built by Nebuchadnezzar, are sometimes referred to as the second (or the seventh) wonder instead of the Hanging Gardens.

STATUE OF ZEUS (JUPITER)
AT OLYMPIA

The work of Phidias (5th century B.C.), this colossal figure in gold and ivory was reputedly 40 ft. high. All trace of it is lost, except for reproductions on coins.

TEMPLE OF ARTEMIS (DIANA)
AT EPHEBUS

A beautiful structure, begun about 350 B.C. in honor of a non-Hellenic goddess who later became identified with the Greek goddess of the same name. The temple, with Ionic columns 60 feet high, was destroyed by invading Goths A.D. 262.

MAUSOLEUM AT HALICARNASSUS

This famous monument was erected by Queen Artemisia in memory of her husband, King Mausolus of Caria in Asia Minor, who died in 353 B.C. Some remains of the structure are in the British Museum. This shrine is the source of the modern word "mausoleum."

COLOSSUS AT RHODES

This bronze statue of Helios (Apollo), about 105 ft. high, was the work of the sculptor Chares, who reputedly labored for 12 years before completing it in 280 B.C. It was destroyed during an earthquake in 224 B.C.

PHAROS OF ALEXANDRIA

The seventh wonder was the Pharos (lighthouse) of Alexandria, built by Sostatus of Cnidus during the 3rd century B.C. on the island of Pharos off the coast of Egypt. It was destroyed by an earthquake in the 13th century.

Population, Land Areas of the World and World Elevations

Area	Estimated population, In thousands, 1956	Approximate area, in thousands of sq. mi.	Per cent of total land area	Population density per sq. mi.	Highest	Elevation, feet	Lowest	Dimensions, miles/ East-West North-South

* Including Black Sea and Sea of Azov. NOTE: For Caspian Sea, see Large Lakes of World elsewhere in this section.

Famous Waterfalls of the World

Waterfall	Location	River	Height, feet
Ángel	Venezuela	Tributary of Caroní	3,800
Cuquenán, or Kukuenaam	Venezuela-British Guiana	Cuquenán	2,000
Sutherland	South Island, N. Z.	Arthur	1,904
Tugela	Natal, South Africa	Tugela	1,800
Ribbon (Yosemite)	California	Creek, flowing into Yosemite	1,612
Upper Yosemite	California	Yosemite Creek, tributary of Merced	1,430
Gavarnie	Southwestern France	Gave de Pau	1,385
Takkakaw	British Columbia	Tributary of Yoho	1,200
Widow's Tears (Yosemite)	California	Tributary of Merced	1,170
Staubbach	Switzerland	Staubbach (Lauterbrunnen valley)	980
Trummelbach	Switzerland	Trummelbach (Lauterbrunnen)	950
Middle Cascade (Yosemite)	California	Yosemite Creek, tributary of Merced	910
Multnomah	Oregon	Multnomah Creek, tributary of Columbia	850
Vettisfos	Norway	Morkedöla	850
King Edward VII	British Guiana	Courantyne	840
Gersoppa	India	Sharavati	830
Kaletour	British Guiana	Pataro	741
Kalambo	Tanganyika-N. Rhodesia	705
Fairy (Mt. Rainier Park)	Washington	Stevens Creek	700
Maradalsfos	Norway	Stream flowing into Ejkdalsvand (lake)	650
Skykkjefos	Norway	In Skykkjedal (valley) of Inner Hardanger Fiord	650
Terni	Italy	Velino, tributary of Nera	650
Maletsunyane (Le Bihan)	Basutoland, Africa	Maletsunyane	630
Bridal Veil (Yosemite)	California	Bridal Veil Creek, tributary of Merced	620
Nevada (Yosemite)	California	Merced	594
Voringfos	Norway	Bjorela	535
Skjaeggedalsfos	Norway	Tyssaa	525
Marina	British Guiana	Tributary of Kurlbrong, a tributary of the Pataro	500
Tequendama	Colombia	Bogotá	450
King George's	Cape Province, South Africa	Orange	450
Herval Cascades	Brazil	400
Guayra	Paraguay-Brazil	Paraná	374
Illilouette (Yosemite)	California	Illilouette Creek, tributary of Merced	370
Granite (Mt. Rainier Park)	Washington	Granite Creek	350
Splendor of Sun	Nikko, Japan	350
Victoria	Southern Rhodesia	Zambezi	343
Comet (Mt. Rainier Park)	Washington	Van Trump Creek	320
Lower Yosemite	California	Yosemite Creek	320
Vernal (Yosemite)	California	Merced	317
Virginia	Northwest Territories, Canada	South Nahanni, tributary of Mackenzie	315
Lower Yellowstone	Wyoming	Yellowstone	308
Grand	Labrador, Canada	Hamilton	302
Sluiskin (Mt. Rainier Park)	Washington	Paradise	300
Snoqualmie	Washington	Snoqualmie	270
Seven Falls	Colorado	266
Tallulah	Georgia	Tallulah	251
Shoshone	Idaho	Snake	195
Narada (Mt. Rainier Park)	Washington	Paradise	168
Niagara	New York-Ontario	Niagara	167
Tower (Yellowstone)	Wyoming	Tower Creek, tributary of Yellowstone	132

Principal Rivers of the World

River	Source	Outflow	Approx. length, miles
Nile	Lake Victoria	Mediterranean Sea	4,160
Amazon	Glacier-fed lakes, Peru	Atlantic Ocean	3,900
Missouri-Mississippi	Source of Red Rock Creek, Montana	Gulf of Mexico	3,891
Ob	Altai Mts., U.S.S.R.	Gulf of Ob	3,200
Yangtze Kiang	Tibetan plateau	China Sea	3,100
Amur	Confluence of Shilka (U.S.S.R.) and Argun (Manchuria) Rivers	Tartary Strait	2,900
Congo	Between Lakes Nyasa and Tanganyika	Atlantic Ocean	2,900
Lena	Baikal Mts., U.S.S.R.	Arctic Ocean	2,800
Yenisei	Tannu Ola Mountains, western Mongolia	Arctic Ocean	2,800
Hwang Ho (Yellow)	East part of Kunlun Mts., west China	Gulf of Chihli	2,700
Niger	Border of Sierra Leone	Gulf of Guinea	2,600
Mackenzie	Head of Finlay River, British Columbia	Beaufort Sea (Arctic Ocean)	2,514
Mékong	Tibetan highlands	South China Sea	2,500
Missouri	Actual headwaters Red Rock Creek; beginning of Missouri at conflu- ence of Gallatin, Mad- ison, Jefferson Rivers	Mississippi River	2,475 (confluence) 2,723 (headwaters)
Mississippi	Lake Itasca, Minnesota	Gulf of Mexico	2,470
Paraná	Confluence of Paranaíba and Grande Rivers, southeast Brazil	Río de la Plata (Atlantic Ocean)	2,450
Murray	Australian Alps, New South Wales	Indian (Southern) Ocean	2,310
Irtish	Altai Mts., U.S.S.R.	Ob River	2,300
Volga	Valdai plateau, U.S.S.R.	Caspian Sea	2,300
Madeira	Confluence of Gauporé and Maumoré Rivers, Bolivia-Brazil border	Amazon River	2,000
St. Lawrence	St. Louis River, Minn.	Gulf of St. Lawrence	1,900
Purús	Southwest Amazonas, Brazil	Amazon River	1,850
Rio Grande	San Juan Mts., Colorado	Gulf of Mexico	1,800
São Francisco	Southwest Minas Geraes, Brazil	Atlantic Ocean	1,800
Yukon	Junction of Lewes and Pelly, Yukon Territory	Bering Sea	1,800
Salween	Tibet, south of Kunlun Mountains	Gulf of Martaban	1,750
Danube	Black Forest, Germany	Black Sea	1,725
Euphrates	Dumlu Dagh (moun- tains), Turkey	Persian Gulf	1,700
Indus	Himalayas	Arabian Sea	1,700
Orinoco	Sierra Parima on Vene- zuela-Brazil boundary	Atlantic Ocean	1,700
Tocantins	Near Pyrenopolis, southeast Brazil	Pará River (Atlantic Ocean)	1,700
Brahmaputra	Himalayas	Ganges River (Bay of Bengal)	1,680
Si Kiang	Plateau of Yunnan, southwest China	China Sea	1,650
Nelson	Head of Bow River, west Alberta, Canada	Hudson Bay	1,600
Zambezi	11°21'S.; 24°22'E., North- ern Rhodesia, Africa	Indian Ocean	1,600
Ganges	Himalayas	Bay of Bengal	1,540
Amu Darya (Oxus)	Nicholas Range, Pamir Mountains, U.S.S.R.	Lake Aral	1,500

River	Source	Outflow	Approx. length, miles
Paraguay	Mato Grosso, Brazil	Paraná River	1,500
Yapurá	Andes, Colombia	Amazon River	1,500
Arkansas	Central Colorado	Mississippi River	1,450
Colorado	Middle Park, northern Colorado	Gulf of California	1,440
Dnieper	Valdai Hills, U.S.S.R.	Black Sea	1,400
Negro	Watershed between Orinoco and Amazon	Amazon River	1,400
Ural	Southern Ural Mountains, U.S.S.R.	Caspian Sea	1,400
Ohio-Allegheny	Plateau in Potter County, Pa.	Mississippi River	1,306
Orange	Basutoland, Africa	Atlantic Ocean	1,300
Irrawaddy	Confluence of N'mai and Mali Rivers, northeast Burma	Bay of Bengal	1,250
Columbia	Columbia Lake, British Columbia	Pacific Ocean	1,214
Saskatchewan	Western Alberta, Canada	Lake Winnipeg	1,205
Darling	Central part of Eastern Highlands, Australia	Murray River	1,160
Tigris	Taurus Mts., Turkey	Euphrates River (Persian Gulf)	1,150
Sungari	Sungari Reservoir, Manchuria, China	Amur River	1,130
Don	Lake Ivan, U.S.S.R.	Sea of Azov	1,100

* Average. † The name Caspian Sea is a misnomer; it is a land-locked lake, so classified by oceanographers.

Volcanoes of the Earth

There are approximately 430 volcanoes (275 in the Northern Hemisphere and 155 in the Southern) with recorded eruptions in historical times. Of the 2,500 recorded eruptions, more than 2,000 have taken place in the Pacific area. Of known active volcanoes, about 80 are of the submarine type.

ATLANTIC-INDIAN AREA

Mediterranean Region

Italy: Mt. Vesuvius, southeast of Naples (3,858 ft.). Only active volcano on mainland of Europe. Pompeii buried by an eruption, A.D. 79. Latest eruption in 1944.

Sicily: Mt. Etna, eastern Sicily (10,741 ft.). Two new craters formed in eruptions of Feb.-Mar., 1947. Worst eruption in 50 years occurred Nov., 1950-Jan., 1951.

Lipari Islands (north of Sicily): Stromboli (about 3,000 ft.). Called "Lighthouse of the Mediterranean." Erupted 1956.

Atlantic Area

Canary Islands: Pico de Teide (Teneriffe), on island of Teneriffe (12,192 ft.).

Cape Verde Islands: Fogo (over 8,000 ft.). Severe eruption in 1857; last until 1951.

Iceland: At least 25 volcanoes active in historic times. These volcanoes very similar to those in Hawaii.

Hekla (4,747 ft.). Several craters, largest about 1½ mi. in circumference. Most recent eruptions reported in 1947-48.

Skaptarjökull. Series of volcanoes near Skaptar; erupted in 1783 with large loss of life and produced largest known single output of lava.

Askja (4,600 ft.). Largest in Iceland.

Jan Mayen Island: Beerenberg, northern part of island (over 8,000 ft.). Extinct.

British Cameroons: Mt. Cameroon (13,353 ft.). Has several craters. Last erupted in 1922.

Lesser Antilles (West Indian Islands): Mt. Pelée, in northwestern Martinique (about 4,400 ft.). Eruption in 1902 destroyed town of St. Pierre and killed approximately 40,000.

Indian Ocean Region

Comoro Islands (east of northern Mozambique): One volcano, Kartala (over 8,500 ft.), is visible for over 100 miles. Last erupted in 1904.

Réunion Island (east of Madagascar): Piton de la Fournaise (Le Volcan) (8,610 ft.). Large lava flows.

Tanganyika Territory: Kilimanjaro (19,565 ft.). Extinct. Highest mountain in Africa.

THE PACIFIC AREA

Northwest Portion

Kamchatka: 14-18 active volcanoes.

Shiveluch (over 10,500 ft.). Most northerly volcano of Kamchatka group.

Klyuchevskaya (Kluchev) (15,912 ft.). Erupted 1954.

Koryatskaya (over 11,500 ft.). Violent eruption in 1895.

Kurile Islands: At least 13 active volcanoes and several submarine outbreaks.

Japan: at least 33 active vents.

Fujiyama (Fujisan), southwest of Tokyo (12,385 ft.). Symmetrical in outline, snow-covered. Regarded as a sacred mountain. Adzumayama (7,733 ft.).

Asamayama (8,182 ft.). Continuously active; violent eruption in 1783; latest in 1955.

Asosan (5,223 ft.). Crater 10 by 15 miles is the largest known in the world; erupted most recently in 1953, killing several students.

Bandaisan, about 125 miles north of Tokyo (9,037 ft.). Violent eruption in 1888 devastated a 27-square-mile area.

Ryukyu archipelago: Nakano-shima (3,485 ft.); Suwanose-shima (2,697 ft.).

Bonin (Ogasawara) Islands: Mt. Suribachi, on Iwo Jima (546 ft.). A sulfurous steaming volcano. Raising of U. S. flag over Mt. Suribachi was one of the dramatic episodes of World War II.

New Britain archipelago: Numerous active vents, including Father, on New Britain (7,500 ft.).

Santa Cruz Islands: Tinakula (2,200 ft.).

New Hebrides: Lopevi (4,755 ft.).

Samoa archipelago: Savail. An eruption in 1905 did considerable damage. Niuafuou (Tin Can) between Samoa and Fiji Islands has a crater 6,000 feet below and 600 feet above water.

Philippine Islands: about 100 eruptive centers; Hibok Hibok on Camiguin island erupted in Sept. 1950, and again in Dec. 1951, when about 750 were reported killed or missing; eruptions continued in 1952-53.

Taal, on Volcano Island in Lake Bombon (about 1,000 ft.). Crater over 7,500 ft. in diameter.

Mayon, in southeastern Luzon (7,946 ft.). An almost perfect cone. Continuous mild activity. Destructive eruption in 1897.

Moluccas: A volcanic chain of islands which contains several active volcanoes.

Hawaiian Group:

Mauna Loa (13,680 ft.). Also called "Long Mountain." Discharges more lava than any other volcano. Largest volcanic mountain in the world in cubic content, with crater of 3.7 sq. mi. Violent eruption in June, 1950, with lava pouring 25 mi. into the ocean.

Mauna Kea (13,784 ft.). Highest mountain in group.

Hualalai (8,269 ft.). Has many small pit craters. Only lava flow in historic times was in 1801.

Kilauea (4,090 ft.). A vent in side of Mauna Loa but apparently erupts independently of it. One of the most spectacular and active craters. Crater has an area of 4.14 sq. mi. Erupted 1952 and again in 1955, with considerable damage.

Southwest Portion

Sumatra: Ninety volcanoes have been discovered; 12 are now active. The most famous, Krakatoa, is a small volcanic island in the Sunda Strait. Numerous volcanic discharges occurred in 1883. One explosion caused the disappearance of the highest peak and the northern part of the island. Fine dust was carried around the world in the upper atmosphere. Over 36,000 persons lost their lives in resultant tidal waves, which were felt as far away as Cape Horn. Active in 1928, 1950 and 1953.

Java: Thirteen of 125 volcanic centers are active. Few serious eruptions. Galunggung is famous for two destructive eruptions in 1822. It is thought that over 100 villages and about 4,000 lives were lost. Eruption of Merapi in 1954 caused number of deaths; it was active again in 1957.

Lesser Sunda Islands: Fifteen eruptive cones. Tamboro on Soembawa (Sumbawa) (about 9,000 ft.) was 13,000 ft. prior to a severe eruption in 1815, which ejected an estimated 36 cu. mi. of material.

Melanesian area: Volcanoes are located on New Guinea, New Hebrides, Santa Cruz, Solomons, and on numerous other small islands. Eruption of Mt. Lamington in Papua Territory, New Guinea, in Jan., 1951, killed more than 3,000.

New Zealand: Tarawera, on North Island. Severe eruption in 1886 destroyed the famous pink and white sinter terraces of Rotomahana, a hot lake.

Ngauruhoe (7,515 ft.). Emits steam and vapor incessantly. Major eruptions, 1952-54.

Northeast Portion

Aleutian area: There are 32 active vents known, and numerous inactive cones.

Shisaldin, on Unimak (8,683 ft.). Latest eruption Jan., 1947.

Bogosloff, on Bogosloff island (Castle) (about 1,000 ft.). Mountain first appeared after an eruption in 1796.

Alaska:

Wrangell (14,005 ft.) and Katmai (about 7,500 ft.).

On June 6, 1912, a violent eruption of the volcano Nova Rupta occurred, during which the "Valley of Ten Thousand Smokes" was formed.

United States: Lassen Peak, in California (10,453 ft.). Only observed active volcano in the United States. Last period of activity in 1914-17. Other mountains of volcanic origin include Mt. Shasta, Mt. Hood,

Mt. Rainier, and the mountain that contains Crater Lake.

Mexico:

Popocatepetl (17,883 ft.). Crater 673 ft. deep and $2\frac{1}{2}$ mi. in circumference. Not entirely extinct; steam still escapes.

Colima (14,239 ft.), in group that has had frequent eruptions.

Orizaba (Citlaltepetl) (18,696 ft.).

Tuxtla (4,900 ft.). Had a violent eruption in 1793 but is now quiescent.

Paricutín. First appeared in Feb., 1943. In less than a week a cone over 140 ft. high developed with a crater one quarter mile in circumference. Cone grew over 1,500 ft. in 1943. Erupted 1952.

Boquerón ("Big Mouth"). Newest volcano in Western Hemisphere, discovered Sept., 1952 on San Benedicto island, about 250 mi. south of Lower California.

Guatemala:

Santa María Quezaltenango (12,361 ft.). Frequent activity between 1902-08 and 1922-28 after centuries of quiescence. Most dangerously active vent of Central America. Other volcanoes include Tajumulco (13,814 ft.) and Atitlán (11,633 ft.).

El Salvador: Izalco, "beacon of Central America," which first appeared in 1770 and is still growing (erupted in 1950, 1956); San Salvador, which had a violent eruption in 1923 and Conchagua, which erupted with considerable damage early in 1947.

Nicaragua: Volcanoes include Telica, Coseguina and Momotombo. Between Momotombo on the west shore of Lake Managua and Coseguina overlooking the Gulf of Fonseca, there is a string of more than 20 cones, many still active. One of these, Cerro Negro, erupted in July, 1947, with considerable damage and loss of life, and again in 1948-50.

Costa Rica: Four volcanic cones whose bases merge are Poás (8,895 ft.), Barba (9,280 ft.), Irazú (10,525 ft.), and Turrialba (11,350 ft.).

Southeast Portion

Colombia: Huila (18,700 ft.), a vapor-emitting volcano, and Tolima (17,109 ft.).

Eruption of Puracé (15,420 ft.), 1949, killed 17.

Ecuador: Cotopaxi (19,344 ft.). Perhaps highest active volcano in the world. Possesses a beautifully formed cone.

Cayambe (19,170 ft.). Almost on equator. Other volcanoes include Tunguragua (16,689 ft.) and Sangay (17,470 ft.).

Peru and Bolivia: Many active volcanoes, Misti, near Arequipa, Peru (19,167 ft.). Sajama, in Bolivia (21,391 ft.).

Licancábur, in Bolivia (about 19,500 ft.).

Chile and Argentina: About 25 active or potentially active; destructive eruptions of Villarrica, Chile, 1948, and of Nilahue and Riñihue, 1955.

Interesting Caves and Caverns of the World

Aggtelek. In village of same name, northern Hungary. Large stalactitic cavern about 5 miles long.

Altamira Cave. Near Santander, Spain. Contains animal paintings (Old Stone Age art) on roof and walls.

Antiparos. On island of same name in the Grecian Archipelago. Some stalactites are 20 ft. long. Brilliant colors and fantastic shapes.

Blue Grotto. On island of Capri, Italy. Cavern hollowed out in limestone by constant wave action. Now half filled with water because of sinking coast. Name derived from unusual blue light permeating the cave. Source of light is a submerged opening, light passing through the water.

Carlsbad Caverns. Southeast New Mexico. Largest underground labyrinth yet discovered. Three levels: 754, 900, and 1,320 feet below the surface.

Fingal's Cave. On island of Staffa off coast of western Scotland. Penetrates about 200 ft. inland. Contains basaltic columns almost 40 ft. high.

Ice Cave. Near Dobsina, Czechoslovakia. Noted for its beautiful crystal effects.

Jenolan Caves. In Blue Mountain plateau, New South Wales, Australia. Beautiful stalactitic formations.

Source of much information on Paleolithic man.

Geysers exist in many volcanic regions of the world such as Japan and South America, but their greatest development is in Iceland, New Zealand and Yellowstone National Park, Wyoming, U. S. A.

Iceland. The principal geyser area is about 30 miles northwest of Mt. Hekla, where there are more than 100 geysers and hot springs in about two square miles. The main ones are the following:

Great Geyser (Geysir). Sends up a column 160 to 180 ft. high intermittently from an opening more than 9 ft. across and about 70 ft. deep.

Strokkur (Churn). Constant bubbling and occasional eruptions.

New Zealand. There is a great profusion of boiling springs, steam jets and mud volcanoes northeast of Lake Taupo on North Island. Main geysers are *Waikite*, with a 30-35 ft. column, *Pohutu* and *Waimauku*.

United States

Yellowstone National Park, Wyoming. There are 120 named geysers in Yellowstone and perhaps half that number un-

Luray Cavern. Near Luray, Virginia. Has large stalactitic and stalagmitic columns of many colors.

Mammoth Cave. Limestone cavern in central Kentucky. Cave area is about 10 miles in diameter but has at least 150 miles of irregular subterranean passageways at various levels. Temperature remains fairly constant at 54°F.

Peak Cavern or Devil's Hole. Derbyshire, England. About 2,250 ft. into a mountain. Lowest part is about 600 ft. below the surface.

Postumia (Adelsberg) Grotto. Near Postumia in Julian Alps, about 25 miles N.E. of Trieste. Stalactitic cavern, largest in Europe. *Pluca* (Pivka) River flows through part of it. Caves have numerous beautiful stalactites.

Singing Cave. Iceland. A lava cave; name derived from echoes of people singing in it.

Wind Cave. In Black Hills of South Dakota. Limestone caverns with stalactites and stalagmites almost entirely missing. Variety of crystal formations called "boxwork."

Wyandotte Cave. In Crawford County, southern Indiana. A limestone cavern with five levels of passages; one of the largest in North America. "Monumental Mountain," approximately 135 ft. high, is believed to be one of the world's largest underground "mountains."

Geysers

named. Most of the geysers and the 4,000 or more hot springs are located in the western portion of the park. The most important are the following:

Norris Geyser Basin has 24 or more active geysers; the number varies. There are scores of steam vents and hot springs. *Valentine* is highest, erupting 50-75 ft. at intervals varying from 18 hr. to 3 days or more. *Minute*, 15-20 ft. high, several hours apart. Others include *Steamboat*, *Fearless*, *Veteran*, *Vixen*, *Corporal*, *Whirligig*, *Little Whirligig* and *Pinwheel*.

Lower Geyser Basin has at least 18 active geysers. *Fountain* throws water 50-75 ft. in all directions at unpredictable intervals. *Clepsydra* erupts violently from four vents up to 30 ft. *Great Fountain* plays every 8 to 15 hr. in spurts from 30 to 90 ft. high.

Midway Geyser Basin has vast steaming terraces of red, orange, pink and other colors; there are pools and springs, including the beautiful *Grand Prismatic Spring*. *Excelsior* crater discharges boiling water into Firehole River at the rate of 6 cu. ft. per second.

Upper Geyser Basin includes *Artemisia*, which sends up a column 15-35 ft. every 24 to 30 hr. *Riverside* has an unusual cone; it throws water 75 ft. obliquely over the river for half an hour. Interval ranges from 6 to 8½ hr.

Rocket is irregular and unpredictable, as is its neighbor *Grotto*.

Giant erupts up to 200 ft. at intervals of 2½ days to 3 mo.; eruptions last about 1½ hr. *Daisy* sends water up to 75 ft. but is irregular and frequently inactive.

Old Faithful sends up a column varying from 116 to 175 ft. at intervals of about 65 min., varying from 33 to 90 min. Eruptions last about 4 min., during which time about 12,000 gal. are discharged.

Giantess seldom erupts, but during its active periods sends up streams 150-200 ft.

Lion Group: *Lion* plays up to 60 ft. every 2-4 days when active; *Little Cub* up to 10 ft. every 1-2 hr. *Big Cub* and *Lioness* seldom erupt.

Castle usually erupts twice daily to a height of 75 ft.

Mammoth Hot Springs. There are no geysers in this area. The formation is travertine. Sides of a hill are steps and terraces over which flow the steaming waters of hot springs laden with minerals. Each step is tinted by algae to many shades of orange, pink, yellow, brown, green and blue. Terraces are white where no water flows.

Other groups of geysers, hot pools and mud pots are located on the west shore of Shoshone Lake, on West Thumb Bay, at Mud Volcano, in the Grand Canyon of the Yellowstone, and on Mirror Plateau.

World Extremes of Climate

Highest recorded shade temperature:

World: 136° F. at Azlizia, Libya, North Africa, September 13, 1922.

United States: 134° F. at Death Valley, California, July 10, 1913.

Lowest recorded temperature:

World -100.4° F. near the South Pole, Antarctica, May 11, 1957. In Siberia, -89.9° F. at Oimekon, February 6, 1933, and -89.7° F. at Verkhoyansk, February 5 and 7, 1892.

United States: -70° F. at Rogers Pass, Montana, January 20, 1954.

Highest mean annual temperature:

World: 88° F. at Lugh, Somaliland, Africa, 13-year average.

United States: 77.6° F. at Key West, Florida, 30 year normal.

Maximum rainfall for 24-hour period:

World: 46 inches at Baguio, Luzon, Philippines, July 14-15, 1911.

United States: 26.12 inches at Hoegees Camp, California, January 22-23, 1943. (Unofficially observed, 38.20 inches at Thrall, Texas, September 9-10, 1921.)

Maximum rainfall in one month:

World: 366.14 inches at Cherrapunji, India, July, 1861 (over 150 inches fell in 5 consecutive days in August, 1841).

United States: 71.54 inches at Helen Mine, California, January, 1909.

Maximum average annual precipitation (calendar year):

World: 471.68 inches at Mt. Waialeale, Island of Kauai, Hawaiian Islands, 1912-1949; 450 inches at Cherrapunji, India, 74 year average.

United States: 150.73 inches at Wynoochee, Washington, 13 year average.

Minimum average annual precipitation (calendar year):

World: 0.02 inch at Arica, Chile, 43 year average.

United States: 1.66 inches at Greenland Ranch, California, 44 year average. (Bagdad, California holds the U. S. record for the longest period with no measurable rain, 767 days, Oct. 3, 1912 to Nov. 8, 1914.)

Lowest mean annual temperature:

World: -60° F. (estimated) near South Pole, Antarctica.

United States: 26.9° F. at Mount Washington, N. H., 24 year average.

Other U. S. precipitation extremes:

Wettest state: Louisiana, 65 year annual average of 57.34 inches.

Driest state: Nevada, 66 year annual average of 8.60 inches. (Average annual precipitation for the United States is about 29 inches.)

Heavy U. S. snowfall records:

Greatest average annual: 575.1 inches at Paradise Ranger Station, Rainier Park, Washington.

Greatest amount in one season: 1000.3 inches at Paradise Ranger Station, Rainier Park, Washington, 1955/56.

Greatest amount in a calendar month: 390 inches at Tamarack, California, Jan., 1911.

Greatest in 24 hours: 76 inches at Silver Lake, Colorado, April 14-15, 1921. (This storm, April 12-15, produced highest known rates in U. S. for durations up to 3 days—95 inches in 48 hours; 98 inches in 72 hours; 100 inches in 85 hours.)

In the New York City blizzard of December 26, 1947, 25.8 inches of snow fell in about 20 hours, almost 5 inches more than fell in the blizzard of March, 1888.

Largest hailstone definitely recorded in U. S.: 1½ pounds by weight, at Potter, Nebraska, July 6, 1928.

Ancient Empires

The *Egyptian* and *Babylonian* empires, Near Eastern civilizations whose cultures mark the beginning of written history, had their origins in the nebulous period of ancient history prior to the year 4000 B.C. They developed rapidly in the fertile river valleys of the Nile in Egypt and the Tigris-Euphrates in Mesopotamia after the discovery of metals and the invention of writing. Their governments were all-powerful, with the people subjugated and without political rights. The Egyptians regarded their king as a god. In Babylon, the ruler was a priest-king, earthly representative of the gods. Nevertheless, these Near East cultures made great contributions to the eternal march of man; they advanced the ways of making and doing things, produced the earliest literature, developed the principles of law (the code of Hammurabi, Babylonian king of the 18th [or possibly 17th] century B.C., the oldest code of law) and science.

The influence of Babylon and Egypt was felt in the rise of the Semitic tribes of Syria, the Hittites in Asia Minor, and the people of the Aegean region. Between the years 1200 and 800 B.C., the small Syrian states grew to great power and then were overwhelmed by the great empire of the *Assyrians*, the warlike peasants of the Tigris valley, who took the lessons learned from the Babylonians and spread that culture over their domains. The Assyrians, like the Egyptians and the Babylonians, in turn fell under the power of the *Persian* kings in the century between 600 and 500 B.C. By 525 B.C., the Persian Empire extended from India to Egypt.

The lessons learned by these early Near Eastern civilizations were transmitted to *Greece*, which developed its illustrious empire in the Aegean region, after the inhabitants of the island of Crete had absorbed the Egyptian culture. The mainland Greeks overthrew the Cretans and in turn were succeeded by the Doric Greeks, who spread their culture across the Aegean, the Asia Minor coast, and into the Mediterranean and Black Sea regions. The char-

acteristic Greek political institution was the city-state, first ruled by kings and often temporary monarchical tyrannies, and finally by the participation of free citizens. Literature and the arts flourished, and by the 5th century B.C., when Athens became the great city of the Greeks, drama had risen to full maturity with the great tragedies of Sophocles and Euripides and the comedies of Aristophanes. Architecture and art advanced apace. The Greeks, learning much from their Egyptian teachers, produced such superb buildings as the Parthenon and created amazingly beautiful statues through the use of living models. Religion, which was closely linked with art, also flourished, as did the development of philosophy, under Socrates, Plato and Aristotle. Wars weakened the city-states, and they fell to Alexander the Great in the 4th century B.C.

Last among the great ancient empires was the *Roman*, which developed in Italy and gained control over the Mediterranean region after absorbing the culture of Greece and combining with it new principles of law and art and teaching this new learning to the West. The development of the Roman civilization began in 510 or 509 B.C., when the peoples on the peninsula of Italy freed themselves from the rule of the Etruscans. The Romans, with a republican form of government, speedily conquered Italy and the Mediterranean region, and the Roman governors became men of great wealth, corrupting the city-state system and making it a graft-ridden machine of exploitation. The failure of the government to check this self-seeking influence brought on a revolt which resulted eventually in the rise of Julius Caesar to dictatorship in 46-44 B.C. Caesar's murder in the Senate at Rome was followed in 27 B.C. by the establishment of the one-man rule of Augustus over the Roman Empire. Legal practices were developed and became the foundations of modern law. This great ancient civilization began to crumble in the 3d century A.D.

Languages of the World

(spoken natively by 5,000,000 or more people)

		Turkish	20,000,000
		Uzbek (U.S.S.R.)	6,000,000
		Yiddish	5,000,000

Universities—Medieval and Modern

Universities, in the modern sense of the term, sprang up in the 12th and 13th centuries in response to the resurgence of learning that preceded the Renaissance in Europe. Procedure at the early universities was informal, with students gathering at some place in a city to listen to a pre-eminent teacher. There were no campuses, buildings or endowments. Actually, the term "university" once meant a guild or corporation; there were, in the medieval period, "universities" of bootmakers, weavers, etc. Thus the university of learning was similar in organization to the guilds. The students filled the role of apprentices and the teachers were the masters.

The first European university was that of *Salerno* in the 9th century, when it was known as a school of medicine. By the 11th century, it had become one of the most famous medical schools of Europe.

University of Bologna. Originated about 1200 as student guilds for protection against the merchants and citizens of Bologna who had raised prices of food and lodging. It was famous for its legal scholars. The students were organized into two guilds and exercised a great deal of authority over the administration.

Other Italian universities famed in the Middle Ages included those at *Arezzo*, *Fer-*

rara, Florence, Modena, Naples, Padua, Padua, Perugia, Siena and Vicenza.

University of Paris. Originated between 1150 and 1170 in a cathedral school on the Ile de la Cité, it was later moved to the left (south) bank of the Seine, although it remained under the authority of the chancellor of Notre Dame. It developed into the most famous continental center of learning of its day. Its four principal schools were theology, medicine, law and arts. By the 14th century, the university had some 40 colleges, of which the *Sorbonne* became the most celebrated.

The universities of Paris and Bologna had a marked influence in the subsequent creation of other university centers. About 1167-68 there was a migration of students from Paris to Oxford (founded in the 12th century) and about 1210, from Oxford to Cambridge (also founded in the 12th century).

Other famous universities of the Middle Ages include the *University of Toulouse* (1233), *Salamanca* (1243), *Seville* (1254), *Orléans* (1305), *Valladolid* (1346), *Prague* (1347), *Kraków* (1364), *Vienna* (1364), *Erfurt* (1379), *Heidelberg* (1385), *Cologne* (1388), *Leipzig* (1409), *Rostock* (1419) and *Louvain* (1426).

The Renaissance

The Renaissance gave fresh impetus to the universities of Europe. In France three of importance arose in the 15th century—the *University of Aix* (1409, Provence), the *University of Poitiers* (1431) and the *University of Caen* (1437).

Other French institutions of note that arose in this era were at *Bordeaux* (1441), *Valence* (1452), *Nantes* (1463) and *Bourges* (1465). New European universities were also founded at *Trier* (1450), *Freiburg* (1455), *Ingolstadt* (1459), *Basel* (1460), *Budapest* (1475), *Mainz* (1476), *Uppsala* (1477), *Tübingen* (1477), *Copenhagen* (1479), *Wittenberg* (1502), *Frankfurt on Oder* (1506) and *Coimbra* (1537).

St. Andrews, founded in 1411, was the first university in Scotland. Others were the *University of Glasgow* (1453) and the *University of Aberdeen* (1494). The *College of Edinburgh* was established in the post-Reformation period (1582). In Ireland, *Trinity College* was founded in Dublin in 1591.

Reformation and Post-Reformation

Until the Reformation, most of the institutions of higher learning in Europe were under the tutelage of the Catholic Church. After 1520, however, many established universities declared their independence of the Church. Cromwell's rule brought about new scholastic methods at both Oxford and Cambridge and the es-

tablishment of new colleges thoroughly imbued with Protestantism.

But the first Protestant university was that of *Marburg*, Germany, founded in 1527. Other Protestant universities were: *Königsberg* (1544); *Jena* (1558); *Helmstedt* (1575); *Altdorf* (1575); *Giessen* (1607); *Strasbourg* (1621); *Halle* (1693).

18th, 19th and 20th Centuries

Among the more famous institutions in this era was *Göttingen* (1736), whose school of history became celebrated throughout Europe. Others were: *Erlangen* (1743); *Berlin* (1809); *Lemberg* (Lwów) (1816); *Bonn* (1818); *Helsingfors* (1828); the *National University at Athens* (1837); *Bucharest* (1864); *Tokyo* (1877); *Sofia* (1888) and *Kyoto* (1897).

Among the more famous British universities established in the 19th and 20th centuries were the *University of London* (1828); *Manchester* (1851); the *Mason University College* in Birmingham, later *Birmingham University* (1900); *Liverpool* (1903); *Leeds* (1904); and the *University of Sheffield* (1905). The *University of Wales* (1893) is composed of the colleges of *Aberystwyth*, *Bangor* and *Cardiff*.

There are many large and important universities in the British Commonwealth. In Canada, the famous *McGill University* in Montreal was founded in 1821. Others are the *University of Toronto* (1827); *Queens University* at Kingston, Ont. (1841); *Laval University*, Quebec (1852); *Dalhousie*, Halifax (1818), and *Montreal University* (1878).

The early universities in India were patterned after London University rather than on the Oxford-Cambridge style, and were purely examining institutions. *Calcutta*, *Bombay* and *Madras* universities were founded in 1857 as examining bodies.

In Australia, the state plays an important role in the development of universities. The *University of Melbourne* (1853) has the largest enrollment. Among the others are *Adelaide* (1874); *Tasmania* (1890); *Queensland* (1909); *Sydney* (1850), and *Western Australia* (1911).

There are also many well-endowed universities in New Zealand, South Africa, and other parts of the Commonwealth.

By 1800, Russia had only three universities—*Vilna* (1578), *Dorpat* (1632) and *Moscow* (1755). Other institutions developed later were the *University of Kharkov* (1804); *Kazan* (1804); *Warsaw*, now Polish (originally established 1816, but closed 1832-69); *St. Petersburg* (1819); *St. Vladimir* in Kiev (1835); *Odessa* (1865) and *Tomsk*, in Siberia (1888). The building of universities after the Revolution of 1917 was spurred by the Soviet government.

In China, the growth of universities was hampered by the chaotic state of the government in the 1900's, the recurring civil wars and the conflict with Japan.

The United States

Universities in the United States marched in step with the progress of the nation. The early settlers brought a heritage of European culture which they planted in New England soil. The first university in the country was started as *Harvard College* in 1636, with an endowment totaling 800 pounds. Harvard was to become probably the most famous of the American universities.

The *College of William and Mary* (1693) was the second institution of higher learning established in the colonies. Others started during the colonial period (current names only) are: *Yale* (1701); *University of Pennsylvania* (1740); *Princeton* (1746); *Washington and Lee* (1749); *Columbia* (1754); *Brown* (1764); *Rutgers* (1766) and *Dartmouth* (1770).

After the Revolution of 1776, the state tax-supported university was established. The *University of Virginia* (1819) was a notable early example of this type.

Colleges for women grew up in the second quarter of the 19th century. Among these are: *Mt. Holyoke* (1837); *Elmira* (1855); *Vassar* (1861); *Wells* (1868); *Hunter* (1870); *Wellesley* (1870); *Smith* (1871) and *Bryn Mawr* (1880).

In the latter part of the 19th century, universities established by private endowments arose. Typical of these are: *Cornell* (1865), which is also a land-grant institution; *Johns Hopkins* (1876); *Stanford* (1885) and the *University of Chicago* (1890).

Libraries of the World

Europe and Asia

Among the great libraries of the world, the *British Museum* remains in the first rank with more than 6,000,000 printed volumes and 60,000 manuscripts. It contains such outstanding treasures as the *Codex Alexandrinus* and the *Codex Sinaiticus* of the Bible, the best collection of Greek papyri from Egypt, and vast collections of original historical manuscripts of incalculable value. Some 150,000 volumes were destroyed in air raids during World War II, but many were replaced later.

One of the finest libraries in the world is the *Bibliothèque Nationale* in Paris, which has approximately 6,000,000 volumes, 155,000 manuscripts, 450,000 medals and coins, 5,000,000 prints and engravings and 400,000 maps.

The *State Library* in Berlin, founded in 1659-61, was amalgamated in 1947 with the library of the University of Berlin. Prior to World War II, the *State Library* had 2,850,000 volumes; the new combined library had only 1,500,000. The *State Library* at Munich also suffered extensive war losses, with some 500,000 volumes destroyed; it now contains about 2,000,000. Estimates have placed the war losses of all German libraries at between 20 and 25 million volumes.

The *Nationalbibliothek* in Vienna has about 1,500,000 volumes, a large collection of papyri, and a notable theater and motion picture collection.

While not as large as some of the European state libraries, the *Biblioteca Apostolica Vaticana* in Rome has many priceless old manuscripts bequeathed to the Vatican over the centuries, including the *Codex Vaticanus* of the 4th century.

Three of the more important Italian libraries are the *Biblioteca Nazionale* in Naples, with about 1,400,000 volumes; the *Biblioteca Nazionale Centrale* in Florence, with 4,000,000 volumes; and the *Biblioteca Nazionale Centrale* in Rome, with approximately 1,970,000 volumes.

Other large European libraries are the *Bibliothèque Royale* in Brussels (2,000,000 volumes), the *Biblioteca Nacional* in Madrid (1,500,000), the *University Library* at Amsterdam (more than 1,500,000) and the *Royal Library* in Stockholm (900,000). The *Lenin State Library* in Moscow is said to contain 15,000,000 volumes (a figure that probably includes periodicals), besides many collections of valuable historical documents. In Leningrad, the *Public Library* claims 10,000,000 volumes, and the *Library of the Academy of Sciences* some 8,000,000. There are said to be 350,000 libraries in all parts of the U.S.S.R.

In the Far East, the most extensive libraries are found in Japan, although war damage in 1944-45 was severe. In Tokyo, the *National Diet Library* (formerly the *Imperial Library*) was organized in 1948 as a deposit center. With its various branches, it contains an estimated 4,100,000 volumes. The *University Library* at Kyoto has about 1,820,000.

The oldest national libraries in South America are those of Argentina and Brazil, each founded in 1810; the former has about 600,000 volumes, the latter 1,000,000.

The United States and Canada

The earliest libraries in the colonial era were privately owned, although in 1731 Benjamin Franklin projected the first subscription library in Philadelphia. Endowments helped to set up many of the large

libraries, although many of these institutions are now receiving state or municipal support.

The largest library in the United States is the *Library of Congress*, established in 1800 by Congress. In 1957, it contained more than 11,050,000 books and pamphlets, and total collections of over 36,100,000. It extends services to members of Congress and other government departments, and also offers excellent facilities for persons engaged in scholarly research.

The *New York Public Library*, with some 6,400,000 volumes in 1957, is the largest public library in the U. S.

The *American Library Directory* for 1954 listed 12,478 libraries in the U. S., including 6,925 public (with 3,106 branches), 1,374 college and university, 1,923 special and 2,256 other types.

The growth of libraries attached to colleges and universities in the United States

has been phenomenal, and some of the university libraries are among the largest in the country. Those with more than 1,000,000 volumes each in 1956 were as follows: Harvard, 6,075,000; Yale, 4,280,000; California, including branches, 3,632,000; Illinois, 3,090,000; Michigan, 2,325,000; Columbia, 2,117,000; Chicago, 1,911,000; Minnesota, 1,791,000; Cornell, 1,746,000; Princeton, 1,500,000; Pennsylvania, 1,475,000; Stanford, 1,309,000; Texas, 1,273,000; Duke, 1,198,000; Northwestern, 1,185,000; Ohio State, 1,150,000; Johns Hopkins, 1,068,000; New York University, 1,041,000; Indiana, 1,000,000.

In Canada, the most important public library is that of Toronto, which has more than 875,000 volumes. Large Canadian university libraries include those at Queens (280,000), Toronto (609,000), McGill (720,000), and Laval (339,000). The *American Library Directory* for 1954 listed a total of 719 libraries in Canada, including 683 public.

Museums of the World

(For U. S. Museums, see page 382.)

The modern museum originated during the Renaissance, when the revival of interest in the arts and classical antiquity led princes, nobles and humanists to amass specimens of historical value and to house their collections in special buildings or galleries.

Art Museums

The *British Museum*, London, contains some of the most famous historical objects of the world, including the Elgin Marbles and the Rosetta Stone.

Victoria and Albert Museum, London, whose primary object is to furnish examples to illustrate the history of art, emphasizes architecture and sculpture, ceramics, engraving, book production, paintings, textiles, etc. The library is devoted principally to fine and applied arts of all countries.

National Gallery, London, contains a great number of old Masters, including paintings by Da Vinci, Michelangelo, Tintoretto, Mantegna, Titian, Bellini, Jan van Eyck, Rubens, Rembrandt, Holbein, Constable and Turner.

Tate Gallery, London, established as part of the National Gallery, was badly damaged during air raids of World War II, but was completely restored by 1949.

Wallace Collection, London, has many *objets d'art* and curios of French origin, and first-rank canvases and etchings of Italian, Spanish, Flemish, Dutch and English artists.

In France, the most famous gallery is the *Louvre* in Paris, noted for the magnificence of its architecture as well as for

its art collection, which is the largest in the world. Other Parisian museums of importance are *Cluny*, *Rodin*, *Guimet*, and *Carnavalet*.

Among the magnificent Italian museums, the *National Museum* at Naples contains one of the best arranged and classified collections. The *Uffizi Gallery* in Florence, founded by the Medics, has one of the world's largest and best collections of Italian art. Other galleries in Florence are the *Gallery of Modern Art* (*Pitti Palace*) and the *National Museum* (*Bargello*). Rome has numerous museums, including several in the Vatican.

In Berlin, the *National Gallery* was damaged during World War II.

The *Royal Museum of Fine Arts* in Brussels has a fine collection of French, Flemish and Dutch masters and houses many canvases by Rubens, Van Dyck, Jordans, Rembrandt, Frans Hals and Jan Steen.

The *State Museum* in Amsterdam contains superb works by Rembrandt, Vermeer and others.

Among the notable art museums in other countries are the world-famous *Museo del Prado* in Madrid; the *Tretyakov Gallery* and the *Pushkin State Museum of Fine Arts* in Moscow; the *Hermitage State Museum* in Leningrad; and the *National Museum* in Tokyo, famed for its many Oriental paintings and objects of art.

Science Museums

The *Ashmolean Museum*, oldest in Great Britain, was founded in 1683 by Oxford

University and houses a collection of archeological and classical rarities.

Science Museum of London has exhibits of scientific instruments and appliances which review the progress of science and the history of invention. Other London museums of science are the *Natural History (British Museum)*, the *Imperial War Museum* (exhibits of both World Wars) and the *Geological Museum*.

The *Liverpool Museums* contain valuable collections of natural history and antiquities and are divided into departments of zoology, botany, geology, archeology and ethnology. The buildings were almost completely destroyed during World War II, although most of the exhibits were saved.

The *Manchester Museum* serves as both a municipal and a university museum. The *Bristol Museum* contains departments of geology, zoology, botany, archeology and Bristol antiquities. The *National Museum of Wales* at Cardiff has departments of art, archeology, botany, geology and zoology.

In Edinburgh, Scotland, are the famed *Royal Scottish Museum*, which has collections in art, ethnography, natural history, technology and archeology; and the *National Museum of Antiquities of Scotland*, noted for its coin and manuscript collections.

The *National Museum* in Dublin and the *Municipal Museum* in Belfast have important science collections.

Notable institutions of continental Europe include the *Natural History Museum* in Paris, the *Museum of Oceanography* in Monaco, the *Natural History Museum* in Lisbon, the *State Museum of Geology and Mineralogy* in Leyden (Netherlands), the *Museum of Natural History* in Stock-

holm, the *Natural History Museum* in Vienna, the *Hungarian National Museum* in Budapest, the *National Museum* in Prague, and the various science museums in Berne, Geneva, Zurich and Neuchâtel, Switzerland. Most larger cities of the U.S.S.R. have science museums of varying sizes, some specializing in local exhibits of natural history.

Famous science museums in Germany prior to World War II included the various sections of the *Staatliche Museen* in Berlin (re-established after the war) and the museum of ethnography in Hamburg.

In Calcutta is the *Indian Museum*, outstanding for its marine fauna and vertebrate fossils, and in Bombay the *Victoria and Albert Museum*.

In Australia are the *Queensland Museum* and the *Botanic Museum* in Brisbane, the *South Australian Museum* in Adelaide, and the *Australian Museum* in Sydney.

New Zealand contains the *Canterbury Museum*, Christchurch, rich in local fauna, flora and geological items, and a Maori and Polynesian ethnological collection.

In Africa, the *South African Museum*, Capetown, holds general and local history collections and others illustrating anthropology, ethnology and archeology. The *Durban Museum* contains much anthropological material. In Cairo are the notable collections of the *Egyptian Museum*.

Other museums of note include the *Archeological Museums* at Istanbul, the *Tokyo Science Museum*, the *National Museum of Natural History* in Santiago (Chile), the *National Museum* at Rio de Janeiro, and the *Argentine National Museum of Natural Sciences* at Buenos Aires.

Zoological Gardens

North America has more than 30 major zoos, in the United States, Canada and Mexico. The *Quebec Zoological Society's* collection is made up of Canadian species; Toronto has many exotic species.

The first zoological garden in the United States was established in Philadelphia in 1874. Since that time nearly every large city in the country has acquired a zoo. Among the largest are the celebrated *Bronx Zoo* and the *Central Park Zoo* in New York, the *Lincoln Park Zoo* and the *Brookfield Zoo* in Chicago, and those in St. Louis, Cincinnati, Detroit, Kansas City and San Diego. The *National Zoological Park* in Washington, D. C., in a beautiful setting of hills, woods and streams, was established in 1890 by an act of Congress. Some of the U. S. zoos exhibit their collections in open-air, barless pits; the Brookfield Zoo is an example.

In Europe, zoological gardens have long been popular public institutions. The *Jardin d'Acclimatation*, in the Bois de Boulogne, Paris, was established in 1858, and a model zoo at Vincennes was added in 1937 for the Paris Exposition.

Germany had about 20 zoological gardens, many of which were developed in the peacetime years between World Wars I and II. Large zoos were located in Berlin and Frankfurt am Main. In Munich, the animals were grouped according to the continent of their origin. Others were established at Dresden, Leipzig and Cologne. At Stellingen, the *Hagenbeck Garden* became an outstanding show place and distributing center for animals. Smaller collections were established at Düsseldorf, Elberfeld and Hanover. Several German zoos, notably that at Berlin, were destroyed during World War II.

The *Schönbrunn* at Vienna is one of the oldest zoos in Europe. The Budapest zoological gardens house a fine collection of European birds. At Antwerp, the *Royal Zoological Society* founded a large menagerie in 1843. It was seriously damaged by German bombs during World War II.

In the British Isles, the outstanding collection is in the garden of the *London Zoological Society* in Regent's Park. Although this zoo received a number of direct bomb hits in 1940-41 and again in 1944, it remained open throughout World War II; visitors during this period numbered 6,500,000. Manchester and Clifton have smaller gardens, and the one at Edinburgh is famous for its collection of pen-

guins. The *Dublin Zoo* is noted for its lions, many of which were born there.

The Amsterdam zoo, with its East Indian collection and its aquarium, and the Rotterdam gardens are the two best known in the Netherlands. Built on a high elevation, the *Skansen Zoo* in Stockholm exhibits its north European specimens. The most important gardens in the U.S.S.R. are found in Moscow, where northern as well as exotic species are collected. The zoo at Rome has part of its collection confined in barless pits. At Lisbon there is a small zoological garden, and in Madrid a part of the original royal menagerie. A new zoo notable for its landscaping was opened at Naples, Italy, in 1952.

Famous Structures

(See also Seven Wonders of the World on page 729.)

Ancient

The Great Sphinx of Egypt, one of the wonders of ancient Egyptian architecture, adjoins the pyramids of Giza and has a length of 189 ft. It was built in the 4th dynasty and was used as a temple.

Other Egyptian buildings of note include the *Temples of Karnak and Edfu* and the *Tombs at Beni Hassan*.

The Parthenon of Greece, built on the Acropolis in Athens, was the chief temple to the goddess Athena. It was believed to have been completed by 438 B.C. The present temple remained intact until the 5th century A.D. Today, though the Parthenon is in ruins, its majestic proportions are still discernible.

Other great structures of ancient Greece were the *Temples at Paestum* (about 540 and 420 B.C.); the *Temple of Poseidon* (about 460 B.C.); the *Temple of Apollo* at Corinth (about 540 B.C.); the *Temple of Apollo* at Bassae (about 450-420 B.C.); the famous *Erechtheum* atop the Acropolis (about 421-405 B.C.); the *Temple of Athena Nike* at Athens (about 426 B.C.); the *Olympieum* at Athens (174 B.C.-A.D. 131); the *Athenian Treasury* at Delphi (about 515 B.C.); the *Propylaea* of the Acropolis at Athens (437-432 B.C.); the *Theater of Dionysus* at Athens (about 350-325 B.C.); the "*House of Cleopatra*" at Delos (138 B.C.) and the *Theater* at Epidauros (about 325 B.C.).

The Colosseum (Flavian Amphitheater) of Rome, the largest and most famous of the Roman amphitheaters, was opened for use A.D. 80. Elliptical in shape, it consisted of three stories and an upper gallery, rebuilt in stone in its present form in the third century A.D. Its seats rise in tiers, which in turn are buttressed by concrete vaults and stone piers. It could seat between 40,000 and 50,000 spectators. The

Colosseum was principally used for gladiatorial combat.

The Pantheon at Rome, begun by Agrippa in 27 B.C. as a temple, was rebuilt in its present circular form by Hadrian (A.D. 110-25). Literally the Pantheon was intended as a temple of "all the gods." It is remarkable for its perfect preservation today, and it has served continuously for 20 centuries as a place of worship.

Famous Roman arches include the *Arch of Constantine* (about A.D. 315) and the *Arch of Titus* (about A.D. 80).

Later European

St. Mark's Cathedral in Venice (1063-67), one of the great examples of Byzantine architecture, was begun in the 9th century. Partly destroyed by fire in 976, it was later rebuilt as a Byzantine edifice.

Other famous Byzantine examples of architecture are *St. Sophia* in Constantinople (A.D. 532-37); *San Vitale* in Ravenna (542); *St. Paul's Outside the Walls*, Rome (5th century); the *Kremlin* baptism and marriage church, Moscow (begun in 1397); and *St. Lorenzo Outside the Walls*, Rome, begun in 588.

The Cathedral Group at Pisa (1067-1173), one of the most celebrated groups of structures built in Romanesque style, consists of the cathedral, the cathedral's baptistery, and the *Leaning Tower*. This trio forms a group by itself in the northwest corner of the city. The cathedral and baptistery are built in black and white marble. The campanile (Leaning Tower) is 179 ft. high and leans more than 16 feet out of the perpendicular. There is little reason to believe that the architects intended to have the tower lean.

Other examples of Romanesque architecture include the *Vézelay Abbey* in France (1130); the *Church of Notre-Dame-*

du-Port at Clermont-Ferrand in France (1100); the *Church of San Zeno* (begun in 1138) at Verona, and *Durham Cathedral* in England.

The *Alhambra* (1248-1354), located in Granada, Spain, is universally esteemed as one of the greatest masterpieces of Moslem architecture. Designed as a palace and fortress for the Moorish monarchs of Granada, it is surrounded by a heavily fortified wall more than a mile in perimeter. The location of the Alhambra in the Sierra Nevada provides a magnificent setting for this jewel of Moorish Spain.

The *Tower of London* is a group of buildings and towers covering 13 acres along the north bank of the Thames. The central *White Tower*, begun in 1078 during the reign of William the Conqueror, was originally a fortress and royal residence, but was later used as a prison. The *Bloody Tower* is associated with Anne Boleyn and other notables.

Westminster Abbey, in London, was begun in 1045 and completed in 1065. It was rebuilt and enlarged in 1245-50.

Notre-Dame de Paris (begun in 1163), one of the great examples of Gothic architecture, is a twin-towered church with a steeple over the crossing and immense flying buttresses supporting the masonry at the rear of the church.

Other famous Gothic structures are *Chartres Cathedral* (12th century); *Sainte Chapelle*, Paris (1246-48); *Laon Cathedral*, France (1160-1205); *Rheims Cathedral* (about 1210-50; rebuilt after its almost complete destruction in World War I); *Rouen Cathedral* (13th-16th centuries); *Amiens Cathedral* (1218-69); *Beauvais Cathedral* (begun 1247); *Salisbury Cathedral* (1220-60); *York Minster* or the *Cathedral of St. Peter* (begun in the 7th century); *Milan Cathedral* (begun 1386); and *Cologne Cathedral* (13th-19th centuries; badly damaged in World War II).

The *Duomo* (cathedral) in Florence was founded in 1298, completed by Brunelleschi and consecrated in 1436. The oval-shaped dome dominates the entire structure.

The *Vatican* is a group of buildings in Rome comprising the official residence of the Pope. The *Basilica of St. Peter*, the largest church in the Christian world, was begun in 1450. The *Sistine Chapel*, begun in 1473, is noted for the art masterpieces of Michelangelo, Botticelli and others. The *Basilica of the Savior* (known as *St. John Lateran*) is the first-ranking Catholic Church in the world, for it is the cathedral of the Pope.

Other examples of Renaissance architecture are the *Palazzo Riccardi*, the *Palazzo Pitti* and the *Palazzo Strozzi* in Florence; the *Farnese Palace* in Rome; *Palazzo Grimani* (completed about 1550) in Venice;

the *Escorial* (1563-93) near Madrid; the *Town Hall* of Seville (1527-32); the *Louvre*, Paris; the *Château* at Blois, France; *St. Paul's Cathedral*, London (1675-1710; badly damaged in World War II); the *Ecole Militaire*, Paris (1752); the *Pazzi Chapel*, Florence, designed by Brunelleschi (1429); the *Palace of Fontainebleau* and the *Château de Chambord* in France.

The *Palace of Versailles*, containing the famous Hall of Mirrors, was built during the reign of Louis XIV and served as the royal palace until 1793.

Outstanding European buildings of the 18th and 19th centuries are the *Superga* at Turin, the *Hôtel-Dieu* in Lyon, the *Belvedere Palace* at Vienna, the *Royal Palace* of Stockholm, the *Opera House* of Paris (1863-75); the *Bank of England*, the *British Museum*, the *University of London* and the *Houses of Parliament*, all in London; the *Panthéon*, the *Church of the Madeleine*, the *Bourse* and the *Palais de Justice* in Paris.

The *Eiffel Tower*, in Paris, was built for the Exposition of 1889 by Alexandre Eiffel. It is 984 ft. high.

Asiatic and African

The *Taj Mahal* (1632-50), at Agra, India, built by Shah Jahan as a tomb for his wife, is considered by some as the most perfect example of the Mogul style and by others as the most beautiful building in the world. Four slim white minarets flank the building, which is topped by a white dome; the entire structure is of marble.

Other examples of Indian architecture are the temples at Benares and Tanjore.

Among famed Moslem edifices are the *Dome of the Rock* or *Mosque of Omar*, Jerusalem (A.D. 691); the *Citadel* (1166), and the *Tombs of the Mamelukes* (15th century), in Cairo; the *Tomb of Humayun* in Delhi; the *Blue Mosque* (1468) at Tabriz and the *Tamerlane Mausoleum* at Samarkand.

Angkor Vat, outside the city of Angkor Thom, Cambodia, is one of the most beautiful examples of Cambodian or Khmer architecture. The sanctuary was built during the 12th century.

Great Wall of China (228 B.C.?), designed specifically as a defense against nomadic tribes, has numerous large watch towers which could be called buildings. It was erected by Emperor Ch'in Shih Huang Ti and is 1,400 miles long. Built mainly of earth and stone, it varies in height between 18 and 30 feet.

Typical of Chinese architecture are the pagodas or temple towers. Among some of the better known pagodas are the *Great Pagoda of the Wild Geese* at Sian (founded in 652); *Nan t'a* (11th century) at Fang Shan; the *Pagoda of Sung Yueh Ssu* (A.D. 523) at Sung Shan, Honan.

Other well-known Chinese buildings are the *Drum Tower* (1273), the *Three Great Halls* in the Purple Forbidden City (1627), *Buddha's Perfume Tower* (19th century), the *Porcelain Pagoda* and the *Summer Palace*, all at Peiping.

United States

Rockefeller Center, from 5th to 6th Aves. and from 48th to 51st Sts. in New York City, occupies 12½ acres and contains 15 buildings, the highest being the 70-story *RCA Building*.

Grant's Tomb, at Riverside Dr. near 122nd St. in New York City, contains the bodies of Ulysses S. Grant and his wife. It was completed in 1897.

The Cathedral of St. John the Divine, at Cathedral Pkwy. and Amsterdam Ave. in New York City, was begun in 1892 but

is not yet completed. When completed, it will be the largest Gothic cathedral in the world: 601 ft. long, 146 ft. wide at the nave, 320 ft. wide at the transept.

St. Patrick's Cathedral, at 5th Ave. and 50th St. in New York City, has a seating capacity of 4,500. The nave was opened in 1877; the cathedral was dedicated in 1879.

Lincoln Memorial, in Washington, D. C., was dedicated in 1922. It has 36 columns (the number of states in 1865), each 44 ft. high. The main chamber contains a statue of Lincoln.

Independence Hall, in Philadelphia, was the scene of the signing of the Declaration of Independence and the drawing up of the U. S. Constitution. It was built between 1732-41 as the State House. The Liberty Bell is on the first floor.

Great Disasters

Earthquakes and Volcanic Eruptions

- A.D. 79** Aug. 24, ITALY: eruption of Mt. Vesuvius buried cities of Pompeii and Herculaneum, killing thousands.
- 1755** Nov. 1, PORTUGAL: one of the most severe of recorded earthquakes leveled Lisbon and was felt as far away as southern France and North Africa; between 10,000 and 20,000 killed in Lisbon alone.
- 1883** Aug. 26-28, NETHERLANDS INDIES: eruption of Krakatoa; violent explosions destroyed two-thirds of island. Sea waves occurred as far away as Cape Horn, and possibly England. Estimated 36,000 dead.
- 1902** May 8, MARTINIQUE, WEST INDIES: Mt. Pelée erupted and wiped out city of St. Pierre; 40,000 dead.
- 1906** April 18, SAN FRANCISCO: earthquake accompanied by fire razed more than 4 sq. mi.; more than 500 dead or missing; property damage about 250-300 millions.
- 1908** Dec. 28, MESSINA, SICILY: about 85,000 killed and city totally destroyed by one of most disastrous of recorded earthquakes.
- 1923** Sept. 1, JAPAN: earthquake destroyed third of Tokyo and most of Yokohama; more than 90,000 persons were killed.
- 1935** May 31, INDIA: earthquake at Quetta killed an estimated 50,000.
- 1939** Jan. 24, CHILE: earthquake razed some 50,000 sq. mi.; 30,000 persons killed.
- 1939** Dec. 27, NORTHERN TURKEY: severe quakes destroyed city of Erzingan; about 100,000 casualties.
- 1949** Aug. 5, ECUADOR: earthquake killed about 6,000 and razed 50 towns.
- 1950** Aug. 15, INDIA: second heaviest earthquake on record affected 30,000 sq. mi. in Assam; 20,000-30,000 believed killed.
- 1951** Jan. 18-21, PAPUA TERRITORY, NEW GUINEA: eruption of Mt. Lamington killed more than 3,000.
- 1954** Sept. 9, ALGERIA: about 1,500 reported dead in Northern Algerian earthquake.
- 1956** June 17, AFGHANISTAN: about 2,000 persons were killed during 10-day series of earthquakes in vicinity of Kabul.
- 1957** July 2, NORTHERN IRAN: 1,564 reported dead in earthquake.
- 1957** July 28, MEXICO: about 60 dead in quakes centering in Mexico City and vicinity of Acapulco.

Floods, Avalanches and Tidal Waves

WORLD

- 1228** HOLLAND: 100,000 persons reputedly drowned by sea flood in Friesland section.
- 1642** CHINA: rebels besieging Kaifeng destroyed seawall, causing flood that drowned 300,000 inhabitants.
- 1887** CHINA: hundreds of thousands of lives were reputedly lost in Honan province in overflow of Hwang Ho River.
- 1896** JAPAN: earthquake and tidal wave at Sanriku killed 27,000.
- 1939** CHINA: floods in north; casualties estimated at 10,000,000 homeless, starved or drowned.
- 1946** ALASKA-HAWAII: series of tidal waves in Pacific originating off Alaska killed about 150 in Hawaii.
- 1947** JAPAN: floods in wake of typhoon killed about 2,000 persons on Honshu Island.
- 1948** TURKEY: hundreds of persons were drowned when two rivers in southern Turkey burst their dikes.
- 1948** CHINA: about 1,000 reported dead in floods near Foochow.
- 1950** CHINA: floods in eastern and southern China left 1,000,000 homeless and killed 500.
- 1951** ALPS: snow avalanches killed more than 200 in Alpine regions of Switzerland, Italy, France and Austria.
- 1951** MANCHURIA: floods killed 1,800; 3,000 missing.
- 1953** NORTHWEST EUROPE: storm followed by floods devastated North Sea coastal areas. Netherlands was hardest hit, with 1,794 dead.
- 1954** IRAN: flash flood reportedly killed 2,000 religious pilgrims.
- 1955** INDIA: floods in Punjab, Patiala and at Delhi reported to have killed 1,700.
- 1956** CHINA: floods in three provinces following typhoon killed more than 2,000.

UNITED STATES

- 1889** PENNSYLVANIA: more than 2,000 died in Johnstown flood.
- 1913** OHIO AND INDIANA: floods of Ohio and Indiana rivers took 730 lives.

- 1927 **MISSISSIPPI VALLEY:** floods inundated 20,000 sq. mi.; 700,000 were left homeless.
- 1937 **MISSISSIPPI AND TRIBUTARY VALLEYS:** floods in the Allegheny, Mississippi, Ohio valleys killed hundreds.

- 1954 **TEXAS-MEXICO BORDER:** flood of the Rio Grande river killed 50 or more persons.
- 1955 **NORTHERN CALIFORNIA, OREGON:** week of rains caused \$150,000,000 damage, 74 deaths.

Tornadoes, Typhoons and Hurricanes

(For tornadoes and hurricanes in the U. S., see Pages 362-64.)

WORLD

- 1864 Oct. 5, **INDIA:** most of Calcutta denuded by cyclone; 70,000 killed.
- 1876 Oct. 31, **INDIA:** cyclone, tidal wave swept 3,000 sq. mi.; 215,000 killed.
- 1882 June 6, **INDIA:** cyclone and tidal wave killed 100,000 in Bombay.
- 1906 **CHINA:** typhoon at Hong Kong killed about 10,000.
- 1930 Sept. 3, **SANTO DOMINGO** (now Ciudad Trujillo): hurricane killed about 2,000 and injured 6,000.
- 1934 Sept. 21, **JAPAN:** hurricane killed more than 4,000 on Honshu.
- 1935 Oct. 25, **HAITI:** hurricane, flood killed 2,000 in Jérémie and Jacmel.

- 1942 Oct. 16, **INDIA:** cyclone devastated Bengal; about 40,000 lives lost.
- 1949 Oct. 27, **INDIA:** cyclone along southeastern coast killed about 1,000.
- 1949 Oct. 31-Nov. 2, **PHILIPPINES:** 1,000 persons believed dead following typhoon.
- 1952 Oct. 20-22, **INDO-CHINA, PHILIPPINES:** typhoons killed more than 1,000 persons.
- 1953 Sept. 25, **VIET-NAM:** typhoon left about 1,000 dead.
- 1954 Sept. 26, **JAPAN:** typhoon off Hakodate killed 1,200-1,600.
- 1955 Sept. 19, **MEXICO:** Hurricane Hilda killed over 200 in Tampico area.

Fires and Explosions

WORLD

- 1666 Sept. 2, **ENGLAND:** "Great Fire of London" destroyed 13,200 houses, St. Paul's Church, 86 parish churches, etc. Damage 10 million pounds.
- 1812 Sept. 14, **RUSSIA:** fire started by Russians in Moscow after French occupation destroyed 30,800 houses.
- 1917 Dec. 6, **CANADA:** explosion and fire at Halifax when ammunition ship collided with a vessel; 1,500 dead.
- 1922 **ASIA MINOR:** more than three-fifths of Smyrna destroyed by fire following Turkish occupation.
- 1948 July 28, **GERMANY:** explosion in I. G. Farben Ludwigshafen works killed hundreds, injured 6,000.
- 1949 Sept. 2, **CHINA:** fire on Chungking waterfront killed 1,700 and gutted 10,000 buildings.
- 1955 June 11, **FRANCE:** crash and explosion of racing car into crowd during Grand Prix race, Le Mans, killed 82.
- 1956 Aug. 7, **COLOMBIA:** about 1,200 reported killed when 7 army ammunition trucks exploded at Cali.
- 1956 Aug. 8, **BELGIUM:** 262 died in coal mine fire at Marcinelle.

UNITED STATES

- 1835 Dec. 16, **NEW YORK CITY:** 530 buildings destroyed by fire.
- 1871 Oct. 8, **CHICAGO:** the "Chicago Fire," which started in barn, swept 2,124 acres, burned 17,450 buildings, killed 250 persons; 196 million damage.

- 1872 Nov. 9, **BOSTON:** fire destroyed 800 buildings; 75 million damage.
- 1903 Dec. 30, **CHICAGO:** Iroquois Theatre fire killed 602.
- 1904 Feb. 7, **BALTIMORE, Md.:** fire destroyed most of business section; 125 million damage.
- 1937 March 18, **NEW LONDON, TEXAS:** explosion destroyed schoolhouse; 413 children and 14 teachers killed.
- 1942 Nov. 28, **BOSTON:** Cocoanut Grove night club fire killed about 500.
- 1944 July 17, **PORT CHICAGO, CALIF.:** more than 300 killed in explosion of two ammunition ships.
- 1946 Dec. 7, **ATLANTA:** Fire in Winecoff Hotel killed 119.
- 1947 March 25, **CENTRALIA, ILL.:** explosion in coal mine killed 111 miners.
- 1947 April 16-18, **TEXAS CITY, TEXAS:** most of city destroyed, over 500 dead following explosion on ship.
- 1951 Dec. 21, near **WEST FRANKFORT, ILL.:** 119 coal miners died in explosion.
- 1953 Oct. 16, **BOSTON, MASS.:** explosion and fire aboard U. S. aircraft carrier *Leyte* killed 37.
- 1956 Nov. 25, near **SAN DIEGO, CALIF.:** forest fires destroyed about 40,000 ac.; 11 killed.
- 1957 Feb. 4, near **BISHOP, VA.:** 37 died in coal mine blast.
- 1957 Feb. 5, **RENO, NEV.:** gas explosions destroyed city block; 2 died.

Shipwrecks (not including military or naval action)

WORLD

- 1833 May 11, *LADY OF THE LAKE*: bound from England to Quebec, struck iceberg; 215 perished.
- 1853 Sept. 29, *ANNIE JANE*: emigrant vessel off coast of Scotland; 348 persons died.
- 1912 March 5, *PRINCIPE DE ASTURIAS*: Spanish steamer struck rock off Sebastien Pt.; 500 drowned.
- 1912 April 15, *TITANIC*: sank after colliding with iceberg; 1,513 died.
- 1914 May 29, *EMPRESS OF IRELAND*: sank after collision in St. Lawrence River; 1,024 perished.
- 1928 Nov. 12, *VESTRIS*: British steamer sank in gale off Virginia; 110 persons died.
- 1931 June 14, French excursion steamer overturned in gale off St. Nazaire; approximately 450 died.
- 1939 June 1, Submarine *THETIS*: sank in Liverpool Bay, Eng.; 99 persons perished.
- 1942 Oct. 2, *QUEEN MARY*: rammed and sank a British cruiser; 338 aboard the cruiser died.
- 1948 Dec. 3, *KIANGYA*: Chinese refugee ship wrecked in explosion; about 1,000 believed dead.
- 1949 Jan. 27, *TAIPING*: Chinese liner collided with collier and both sank; at least 600 died.
- 1949 Sept. 17, *NORONIC*: Canadian Great Lakes cruise ship burned at Toronto dock; about 130 died.
- 1950 Jan. 12, *TRUCULENT*: British submarine sank in Thames estuary after collision with tanker; 64 dead.
- 1951 April 16, *AFFRAT*: British submarine sank in English channel; 75 dead.
- 1953 Jan. 9, *CHANG TYONG-HO*: South Korean ferry foundered off Pusan; 249 reported dead.
- 1953 Jan. 31, *PRINCESS VICTORIA*: British ferry sank in Irish Sea; 133 reported lost.
- 1953 Aug. 1, *MONIQUE*: French motor ship with 120 aboard disappeared in South Pacific.
- 1956 June 3, Steamship sank during monsoon in Bay of Bengal; about 200 drowned.
- 1956 July 25, *ANDREA DORIA*: Italian liner collided with Swedish liner *Stockholm* off Nantucket Island, Mass., sinking next day; 52, mostly passengers aboard Italian ship, dead or unaccounted for; more than 1,600 rescued.
- 1957 July 14, *ESHGHABAD*: Soviet ship ran aground in Caspian Sea; about 270 perished.

U. S. AND U. S. LINES

- 1865 April 27, *SULTANA*: boiler explosion on Mississippi River steamboat near Memphis; 1,450 killed.
- 1898 Nov. 26, *CITY OF PORTLAND*: Loss of 157 off Cape Cod.
- 1904 June 15, *GENERAL SLOCUM*: excursion steamer burned in New York Harbor; 1,021 perished.
- 1915 July 24, *EASTLAND*: Great Lakes excursion steamer overturned in Chicago River; 812 died.
- 1934 Sept. 8, *MORRO CASTLE*: about 130 killed in fire occurring off Asbury Park, N. J.
- 1939 May 23, Submarine *SQUALUS*: sank with 59 men off Hampton Beach, N. H.; 33 members of the crew were rescued.
- 1945 April 9, U. S. ship, loaded with aerial bombs, exploded at Bari, Italy; at least 360 killed.
- 1952 Jan. 10, *FLYING ENTERPRISE*: freighter sank about 35 miles off southwest England after valiant 12-day effort by captain, Henrik K. Carlsen, to save ship.
- 1952 April 26, *HOBSON*: minesweeper collided with aircraft carrier *Wasp* and sank during night maneuvers in mid-Atlantic; 176 persons were reported lost.
- 1954 Oct. 7, *MORMACKITE*: freighter capsized off Cape Henry, Va.; 37 lost.
- 1956 Sept. 15, *PELAGIA*: freighter sank in storm off Norway; 32 lost.

Aircraft Accidents (not including military or naval action)

WORLD

- 1921 Aug. 24, ENGLAND: *ZR-2*, British dirigible, broke in two on trial trip near Hull; 62 died.
- 1930 Oct. 5, FRANCE: British dirigible, *R-101*, crashed at Beauvais; 47 died.
- 1935 May 18, U.S.S.R.: stunt flier crashed into giant plane, the *Maxim Gorkey*; 49 killed.
- 1938 July 24, COLOMBIA: military plane crashed into grandstand during air review at Bogotá, killing 53.
- 1947 Feb. 15, COLOMBIA: Avianca airliner crashed near Bogotá; 53 persons were killed.
- 1948 Aug. 1, ATLANTIC OCEAN: French flying boat with 52 persons aboard disappeared.

- 1950 March 12, near CARDIFF, WALES: crash of chartered airliner killed 80.
- 1950 Nov. 13, near GRENOBLE, FRANCE: Canadian plane carrying Holy Year pilgrims crashed; 58 dead.
- 1956 Feb. 18, near VALLETTA, MALTA: Scottish airliner crash killed 50.
- 1956 Feb. 20, near CAIRO, EGYPT: desert crash of French airliner; 52 died.
- 1956 June 20, off ASBURY PARK, N. J.: Venezuelan airliner exploded and fell into Atlantic, killing all 74 aboard.
- 1956 Dec. 9, near CHILLIWACK, B. C., CANADA: Canadian airliner crashed; all 62 aboard killed.
- 1957 March 17, near CEBU CITY, PHILIPPINES: Pres. Ramón Magsaysay and 24 others killed in crash.
- 1957 July 16, near BIAK ISLAND, NEW GUINEA: Crash of Dutch airliner killed 57.
- 1957 Aug. 11, near QUEBEC, CANADA: 79 died in crash of chartered transatlantic airliner; worst Canadian air accident to date.
- U. S. AND U. S. LINES**
- 1925 Sept. 3, CALDWELL, OHIO: U. S. dirigible *Shenandoah* broke apart, killing 14.
- 1933 April 4, NEW JERSEY COAST: U. S. dirigible *Akron* crashed into sea; 73 died.
- 1937 May 6, LAKEHURST, N. J.: German zeppelin *Hindenburg* destroyed by fire at tower mooring; 36 persons were killed.
- 1947 June 13, near LEESBURG, VA.: Fifty killed in crash of airliner.
- 1947 Oct. 24, BRYCE CANYON, UTAH: airliner crashed into hillside after catching fire in midair; 52 persons were killed.
- 1949 June 7, near SAN JUAN, PUERTO RICO: crash of converted army transport into ocean killed 53; 28 rescued.
- 1949 Nov. 1, WASH., D. C.: fighter plane rammed airliner, killing 55.
- 1950 Aug. 31, near CAIRO, EGYPT: crash of U. S. airliner killed 55, including 23 Americans.
- 1951 March 23, ATLANTIC OCEAN: U. S. Air Force transport with 53 aboard disappeared.
- 1951 April 25, near KEY WEST, FLA.: Cuban airliner and U. S. Navy plane collided; 43 killed.
- 1951 June 30, ROCKY MOUNTAIN NATIONAL PARK, COLO.: airliner crash killed 50.
- 1951 Dec. 16, ELIZABETH, N. J.: nonscheduled airliner crash killed 56.
- 1952 Jan. 22, ELIZABETH, N. J.: 29 killed, including former Sec. of War Robert P. Patterson, when airliner hit apartments; 7 were on ground.
- 1952 Feb. 11, ELIZABETH, N. J.: third major air disaster in Elizabeth within 2 months fatally injured 33.
- 1952 April 11, near SAN JUAN, PUERTO RICO: airliner crashed into sea; 52 killed, 17 rescued.
- 1952 April 29, NORTH CENTRAL BRAZIL: airliner bound for New York crashed in jungle; 50 died.
- 1952 Nov. 23, near ANCHORAGE, ALASKA: Air Force transport crash; 52 killed.
- 1952 Dec. 20, MOSES LAKE, WASHINGTON: crash of Air Force "Globemaster" killed 87 servicemen, injured 28.
- 1953 Feb. 14, GULF OF MEXICO: airliner crash during storm killed 46.
- 1953 June 18, near TOKYO, JAPAN: crash of U. S. Air Force "Globemaster" killed 129 servicemen in world's worst air disaster to date.
- 1953 July 11, PACIFIC OCEAN: airliner crashed about 325 mi. east of Wake Island; 58 persons were killed.
- 1954 Oct. 31, ATLANTIC OCEAN: U. S. navy plane with 42 aboard lost.
- 1955 March 22, near HONOLULU, HAWAII: crash of U. S. navy transport plane killed 66.
- 1955 Aug. 11, near EDELWEILER, GERMANY: two U. S. troop carriers collided; 66 air force personnel killed.
- 1955 Oct. 6, near LARAMIE, WYO.: airliner hit mountain; 66 died.
- 1955 Nov. 1, near LONGMONT, COLO.: criminally-placed time-bomb destroyed airliner in flight, killing 44.
- 1956 June 30, GRAND CANYON, ARIZ.: 128 died in collision of two airliners; worst commercial air disaster to date.
- 1956 July 13, near FORT DIX, N. J.: 45 of 66 aboard killed in crash of U. S. air force transport.
- 1956 Oct. 11, ATLANTIC OCEAN: U. S. Air Force plane with 59 aboard disappeared.
- 1957 Feb. 1, NEW YORK, N. Y.: airliner crash on Rikers island killed 20 of 101 aboard.
- 1957 March 21, PACIFIC OCEAN: U. S. Air Force plane disappeared; 67 lost.

Railroad Accidents WORLD

- 1857 March 17, DES JARDINES CANAL, CANADA: train derailed on bridge; about 60 killed.
- 1864 June 29, near BELOEIL, CANADA: about 90 killed when train ran through open switch.

- 1879 Dec. 28, DUNDEE, SCOTLAND: train blown off Tay bridge; 73 drowned.
- 1881 June 24, near CUARTLA, MEXICO: about 200 died when train fell into river.
- 1882 July 13, near TCHERNY, RUSSIA: more than 150 killed in derailment.
- 1889 June 12, near ARMAGH, IRELAND: about 80 killed in collision.
- 1891 June 14, near BASEL, SWITZERLAND: about 100 killed in collision.
- 1915 May 22, GRETNA, SCOTLAND: two passenger trains and troop train collided; 227 killed.
- 1917 Dec. 12, MODANE, FRANCE: almost 550 reported killed in derailment of troop train near mouth of Mt. Cenis tunnel.
- 1938 Dec. 25, near KISHINEV, RUMANIA: about 100 killed in collision.
- 1939 Dec. 22, near MAGDEBURG, GERMANY: more than 125 killed in collision; 99 killed in another wreck near Friedrichshafen.
- 1940 Jan. 29, OSAKA, JAPAN: 200 killed in collision.
- 1944 March 2, near SALERNO, ITALY: 521 suffocated when Italian train stalled in tunnel.
- 1949 Oct. 22, near NOWY DWOR, POLAND: more than 200 reported killed in derailment of Danzig-Warsaw express.
- 1950 April 6, near RIO DE JANEIRO, BRAZIL: train wrecked when bridge collapsed; 108 killed or missing.
- 1952 March 4, near RIO DE JANEIRO, BRAZIL: about 120 reported killed in collision of 2 trains.
- 1952 Oct. 8, HARROW-WEALDSTONE, ENGLAND: two express trains crashed into commuter train; 112 dead.
- 1953 Dec. 24, near WAIOURI, NEW ZEALAND: train plunged through bridge; 155 dead and others missing.
- 1953 Dec. 24, near SAKVICE, CZECHOSLOVAKIA: crash of two trains reported to have killed 103.
- 1954 Sept. 28, near HYDERABAD, INDIA: 137 dead when train plunged into river.
- 1956 Sept. 2, near MAHBUBNAGAR, INDIA: at least 120 killed when bridge collapsed under train.
- 1957 Sept. 1, near KENDAL, JAMAICA: about 175 killed when train plunged into ravine.

UNITED STATES

- 1856 July 17, near PHILADELPHIA, PA.: train carrying Sunday-school children wrecked; 66 killed.
- 1876 Dec. 29, ASHTABULA, O.: 80 killed when train broke through bridge.
- 1887 Aug. 10, near CHATSWORTH, ILL.: about 80 killed in wreck.
- 1904 Aug. 7, near EDEN, COLO.: about 100 killed in wreck.
- 1910 March 1, WELLINGTON, WASH.: more than 90 killed.
- 1918 July 9, near NASHVILLE, TENN.: more than 100 killed.
- 1938 June 19, MILES CITY, MONT.: train ran through bridge; 47 killed.
- 1943 Sept. 6, PHILADELPHIA, PA.: train derailed; 79 killed.
- 1943 Dec. 16, near RENNERT, N. C.: 72 killed in derailment and collision.
- 1944 Dec. 31, near OGDEN, UTAH: 48 killed in collision.
- 1946 April 25, NAPERVILLE, ILL.: at least 47 killed in collision.
- 1950 Feb. 17, ROCKVILLE CENTRE, N. Y.: head-on crash of two commuter trains killed 30.
- 1950 Nov. 22, RICHMOND HILL, N. Y.: 79 died when one commuter train crashed into rear of another.
- 1951 Feb. 6, WOODBRIDGE, N. J.: 85 died when commuter train plunged through temporary overpass.

HISTORICAL AND NEWS EVENTS

FROM ANCIENT TO MODERN TIMES

Compiled by

ENCYCLOPEDIA BRITANNICA

(See also our section entitled *Headline History of Our Times*)

- Actium, Battle of** (31 B.C.). Octavius defeats Mark Anthony.
- Alexander the Great conquers Greece, Persia, Egypt and part of India** (334-323 B.C.). Major battles: Granicus (334 B.C.), Issus (333), Arbela (331).
- American Revolution** (1775-83). Outstanding events: 1775—Battle of Lexington-Concord (Apr. 19). Battle of Bunker Hill (June 17). 1776—Battle of Long Island (Aug. 27). 1777—Burgoyne surrenders at Saratoga (Oct. 17). 1781—Battle of Cowpens (Jan. 17). Battle of Yorktown (Sept. 28-Oct. 19), and British surrender by Cornwallis. 1783—Treaty signed by U. S. and Britain (Sept. 3).
- "Babylonian Captivity" of Papacy** with seat at Avignon (1309-77).
- Bacon's Rebellion** (May 10-Oct. 18, 1676). Nathaniel Bacon leads unsuccessful insurrection in Virginia because of abuses in government administration and taxation.
- Balfour Declaration** (Nov. 2, 1917) promises Jewish homeland in Palestine.
- Balkan Wars** (1912-13). Bulgaria, Serbia, Greece and Montenegro defeat Turkey; later, Bulgaria attacks Serbia and Greece and is defeated.
- Bastille destroyed** (July 14, 1789).
- Benedictine Order** founded at Monte Cassino (c. A.D. 529).
- Bible** translated by Wycliffe into English (1382-84); Douay Version published (1582 & 1609-10); King James Version published (1611).
- Black Death** (beginning c. 1347) wipes out at least one-quarter of population of Europe.
- Black Friday** (Sept. 24, 1869). Financial panic results from gold corner in U. S.
- Boer War** (1899-1902). Boers defeated by British; sign peace treaty at Pretoria (May 31, 1902).
- Boston Massacre** (Mar. 5, 1770). British soldiers fire on Boston mob, killing 3.
- Boston Tea Party** (Dec. 16, 1773). Colonials dump tea in Boston Harbor because of tea tax.
- Boxer Rebellion** (1900). Uprising by secret society in northern China against foreigners.
- Brown, John, and 18 followers raid Harpers Ferry** (Oct. 16, 1859) and seize arsenal; taken prisoners by U. S. Marines (Oct. 18); Brown hanged (Dec. 2).
- Burr-Hamilton duel.** See Hamilton.
- Cape-to-Cairo Railroad** completed (1918).
- Carthage** founded by Phoenicians (c. 900 B.C.); destroyed by Romans (146 B.C.).
- Châlons, Battle of** (A.D. 451). Attila the Hun defeated by Romans.
- Charlemagne** crowned Emperor of the West (A.D. 800).
- Charles I** beheaded (Jan. 30, 1649). See also Great Rebellion.
- Children's Crusade** (1212). About 50,000 unarmed children set out to recover Holy Sepulchre; all lost or die on the way.
- Chinese-Japanese War** (1894-95). Japan wins Formosa, Pescadores and part of southern Manchuria; Korea becomes independent (annexed by Japan 1910).
- Christianity** made official religion of Roman Empire (A.D. 330).
- Civil War, American** (1861-65). Outstanding events: 1861—First Battle of Bull Run (July 21). 1862—Monitor defeats Merrimac (Mar. 9). Battle of Antietam (Sept. 15-17). 1863—Lincoln's Emancipation Proclamation (Jan. 1). Battle of Gettysburg (July 1-3). Grant captures Vicksburg (July 4). Battle of Lookout Mountain (Nov. 23-25). 1864—Battle of the Wilderness (May 5-6). Sherman's March through Georgia (Nov. 14-Dec. 22). 1865—Lee surrenders at Appomattox (Apr. 9).
- Code Napoléon**, unified codification of French law, adopted (1804).
- Code of Hammurabi** (c. 2300 B.C.). Oldest existing written code of laws.
- Communist Manifesto** issued by Karl Marx and Friedrich Engels (1848).
- Compromise of 1850** admits California as free state; organizes Utah and New Mexico as territories without mention

- of slavery; prohibits slave trade in D. C.; returns fugitive slaves to masters; pays Texas \$10 million for her claim to New Mexico.
- Confederacy** proclaimed by seceding states (Feb. 9, 1861); Jefferson Davis named President.
- Congress of Vienna (1814-15).** European powers, under leadership of Metternich, meet to settle problems of territory and government resulting from Napoleonic Wars.
- Constantinople** founded (as Byzantium) by Greeks (c. 660 B.C.); made capital of Eastern Roman Empire by Constantine the Great (A.D. 330); captured by Turks (1453); renamed Istanbul (1930).
- Council of Nicaea (A.D. 325).** Called by Constantine the Great; establishes official creed of Christianity (Nicene Creed).
- Council of Trent (1545-64).** Called by Pope Paul III, at suggestion of Emperor Charles V, to establish Catholic Counter Reformation.
- "Coxey's Army" (March. 25-May 1, 1894).** Jacob S. Coxey leads 20,000 unemployed on Washington, D. C.
- Crimean War (1853-56).** Russia loses claim to Greek Christians under Turkish flag.
- Crucifixion of Christ (c. A.D. 29).** According to New Testament, Christ rose from the dead 2 days later.
- Crusades (1096-1291).** European Christians, in 7 periods of conflict, attempt to recover Holy Land from Moslems. *See also* Children's Crusade.
- Custer massacre (June 25, 1876).** Gen. George A. Custer and his forces killed at Battle of Little Big Horn by Sioux.
- Divine Comedy** begun by Dante (1307); probably finished in last year of his life (1321).
- Dominican Order** founded (1215).
- Dorr Rebellion (1841-42).** Thomas W. Dorr leads unsuccessful attempt to extend franchise in Rhode Island; franchise extended 1843.
- Dred Scott case (1846).** Dred Scott, Negro slave, sues for freedom on claim he has lived for a time on free soil; U. S. Supreme Court rules (Mar. 6, 1857) that Scott is not a citizen and has no standing in court.
- Dreyfus case (1894).** Capt. Alfred Dreyfus found guilty of treason in France and sentenced to Devil's Island. Finally acquitted (1906).
- Easter Rebellion (April. 24, 1916).** Irish nationalists unsuccessfully attempt to throw off British rule.
- Edict of Nantes (1598).** Extends toleration to Huguenots (French Protestants); its revocation (1685) causes widespread persecution of Huguenots.
- Evolution trial.** *See* Scopes.
- Fawkes, Guy.** *See* Gunpowder Plot.
- Feudalism,** lord-vassal social system, established throughout Europe (9th century); begins to break up (14th-15th centuries).
- Franciscan Order** founded (1210).
- Franco-Prussian War (1870-71).** France defeated by German states; loses Alsace-Lorraine.
- Freedom of press** established in America as John Peter Zenger, New York editor, is acquitted in libel case against Gov. Cosby (1735).
- French and Indian War.** *See* Seven Years' War.
- French Revolution (1789-99).** Outstanding events: 1789—Bastille destroyed (July 14). Feudal rights abolished (Aug. 4). 1792—September Massacres (Sept. 2-6). France becomes republic (Sept. 21). 1793—Louis XVI beheaded (Jan. 21); Marie Antoinette beheaded (Oct. 16). Reign of Terror (spring 1793-summer 1794). 1795—Napoleon heads army. Directory established (Oct. 27). (Revolution merges into Napoleonic Wars.)
- Gold rush** develops as gold is discovered at Sutter's Mill, near Sacramento, Calif. (Jan. 2, 1848).
- Great Rebellion (1642-49).** Civil wars in England. Charles I beheaded (Jan. 30, 1649); Cromwell establishes Commonwealth (1649).
- Great Wall of China** begun (255 B.C.).
- Gregorian Calendar** replaces Julian Calendar in Catholic countries (1582), in Britain and her Colonies (1752), in Russia (1918).
- Gunpowder Plot (1605).** Guy Fawkes, agent of conspirators against King and Parliament, seized as he is about to blow up House of Lords (Nov. 5).
- Hamilton-Burr duel (July 11, 1804)** results in Hamilton's death next day.
- Hastings, Battle of (1066).** Normans led by William the Conqueror invade England.
- Hegira (A.D. 622).** Mohammed flees from Mecca to Medina. Year I of Mohammedan calendar.
- Holy Alliance** formed by Russia, Austria and Prussia (Sept. 26, 1815); intended to regulate government according to Christianity but actually used for repressing political liberty.
- Holy Roman Empire** founded by Otto the Great (962); dissolved by Napoleon (1805).
- Huguenots.** *See* Edict of Nantes; St. Bartholomew Massacre.

- Hundred Years' War** (1338-1453). England loses lands in France. Major battles: Crécy (1346), Poitiers (1356), Agincourt (1415).
- Industrial Revolution** begins in England (c. 1780). Machines gradually replace hand tools, bringing about vast industrial and social changes.
- Inquisition** established (c. 1233) to combat heresy; put under state control in Spain (1480); abolished in France (1772), in Spain (1834).
- International, First** (1864). Founded in London to further world socialism; dissolved in Philadelphia (1876).
- International, Second** (1889). Founded in Paris to celebrate 100th anniversary of French Revolution.
- International, Third** (1919). Founded in Moscow as protest against inactivity of Second International; dissolved (1943). Also called *Communist International* or *Comintern*.

Savonarola, Florentine priest and dictator, tried for sedition and heresy (1498); hanged and burned (May 23).

Scopes Evolution Trial held at Dayton, Tenn. (July 10-21, 1925). John T. Scopes prosecuted by William Jennings Bryan for teaching evolution in Tennessee school; defended by Clarence Darrow.

Scopes convicted but decision later set aside.

Seven Years' War (1756-63). France, Austria, Sweden, Russia vs. England and Prussia. Clive defeats French at Battle of Plassey (1757), giving British supremacy in India; England wins Canada; Prussia retains Silesia. (American phases of war known as French and Indian War, 1754-63.)

Shays' Rebellion (1786). Capt. Daniel Shays leads unsuccessful insurrection against Massachusetts government because of economic crisis.

Slavery in British Empire abolished by Parliament (1833).

Slavery introduced into American Colonies at Jamestown, Va. (1619); abolished in U. S. by 13th Amendment (1865).

Snyder-Gray case (1927). Ruth Snyder and Judd Gray murder her husband, Albert Snyder (Mar. 20); both executed at Sing Sing (Jan. 12, 1928).

Spanish-American War (1898). Outstanding events: U. S. battleship *Maine* blown up in Havana harbor (Feb. 15). Dewey destroys Spanish fleet at Manila (May 1). Charge of San Juan Hill (July 1). Cervera's fleet destroyed off Santiago, Cuba, by U. S. ships (July 3). Treaty of Paris (Dec. 10).

Spanish Armada destroyed by British (1588).

Spartacus, Roman slave and gladiator, leads unsuccessful slave insurrection (73-71 B.C.).

Stamp Act (effective Nov. 1, 1765). First direct tax placed on America by Britain; protested by Stamp Act Congress in New York (Oct. 7-25); repealed by Britain (Mar. 18, 1766).

Sutter's Mill. See Gold.

Texan war of independence from Mexico (1836). Major battles: Alamo (Mar. 6), San Jacinto (Apr. 21).

Thaw-White case (1906). Harry K. Thaw, millionaire, murders Stanford White, noted architect, in Madison Square Garden (June 25).

Thirty Years' War (1618-1648). England, Holland, France, Sweden and German Protestants against Spain, Italy and German Catholics; Peace of Westphalia ends conflict, Alsace going to France, Swiss independence being recognized, and German secularized states being given religious freedom.

Tours, Battle of (A.D. 732). Charles Martel defeats Moslems, checking their advance in western Europe. Also called Battle of Poitiers.

Trojan War (c. 1200 B.C.). Greeks defeat Trojans; destroy city of Troy.

Tutankhamen's tomb discovered near Luxor by Lord Carnarvon and Howard Carter (1922).

Tweed Ring, corrupt New York political group headed by Wm. Marcy Tweed, Tammany Boss, broken up (1872); Tweed convicted (Nov. 5).

War of 1812 (1812-1815). Outstanding events: 1813—Battle of Lake Erie (Sept. 10). 1814—British burn White House at Washington (Aug. 24-25). Battle of Lake Champlain (Sept. 11). U. S. signs treaty with Britain at Ghent (Dec. 24). 1815—Battle of New Orleans (Jan. 8). (Slowness of communications was responsible for continuation of hostilities after treaty.)

Wars of the Roses (1455-85). House of York (white rose) against House of Lancaster (red rose). Richard III slain at Battle of Bosworth Field (1485); Tudor line started by Henry VII.

Whisky Insurrection (July-Nov. 1794). Farmers in western Pennsylvania revolt unsuccessfully against excise tax of 1791.

Witch trials in Salem, Mass., result in death sentences for 19 women by Judge Samuel Sewall (1692).

Woman suffrage first granted in U. S. by Wyoming Territory (1869).

World War I (1914-18). Central Powers (Austria-Hungary, Germany, Bulgaria, Turkey) vs. Allies (U. S., Britain, France, Russia, Belgium, Serbia, Greece, Rumania, Montenegro, Portugal, Italy, Japan). Outstanding events: 1914—Austria declares war on Serbia (July 28). Germany declares war on Russia (Aug. 1) and on France (Aug. 3). Germany invades Belgium (Aug. 4). Britain declares war on Germany (Aug. 4). Germans defeat Russians at Tannenberg, East Prussia (Aug. 31). First Battle of the Marne (Sept. 5-12). 1915 Dardanelles campaign against Turkey fails. 1916—Battle of Jutland (May 31). Battles of the Somme (July-Nov.). Germans turned back at Verdun (Sept. 3). Rumania overrun by Central Powers; fall of Bucharest (Dec. 6). 1917—Germany begins unrestricted submarine warfare. U. S. declares war (Apr. 6). Battle of Caporetto (Oct. 24-Dec. 26). 1918—Second Battle of the Somme (Aug. 21-Sept. 3). Third Battle of the Aisne (May 27-June 6). Second Battle of the Marne (July 15-Aug. 7). U. S. troops take St. Mihiel (Sept. 13). Battle of the Meuse-Argonne (Sept. 20-Nov. 11). Allies break Hindenburg line (Oct. 5). Armistice signed (Nov. 11).

Zenger case. See Freedom of press.

Firsts in America

Occasionally other sources may differ with this list. Our selection is based on our editorial judgment.

Admiral in U. S. Navy: David Glasgow Farragut, 1866.

Air-mail route, first transcontinental: Between New York City and San Francisco, 1920.

Assembly, representative: House of Burgesses, founded in Virginia, 1619.

Bank established: Bank of North America, Philadelphia, 1781.

Birth in America of English parents: Virginia Dare, born Roanoke Island, N. C., 1587.

Botanic garden: Established by John Bartram in Philadelphia, 1728. (Oldest existing one was established in Cambridge, Mass., in 1807.)

Cartoon, colored: "The Yellow Kid," by Richard Outcault, in *New York World*, 1895.

College to confer degrees on women: Oberlin (Ohio) College, 1841.

College to establish coeducation: Oberlin (Ohio) College, 1833.

Electrocution of a criminal: William Kemmler in Auburn Prison, Auburn, N. Y., Aug. 6, 1890.

Five and Ten Cents Store: Founded by Frank Woolworth, Utica, N. Y., 1879 (moved to Lancaster, Pa., same year).

Fraternity: Phi Beta Kappa; founded Dec. 5, 1776, at College of William and Mary.

Law to be declared unconstitutional by U. S. Supreme Court: Judiciary Act of 1789. Case: Marbury vs. Madison, 1803.

Library, circulating: Philadelphia, 1731.

Newspaper published for a continuous period: *The Boston News-Letter*, April, 1704.

Newspaper, illustrated daily: *New York Daily Graphic*, 1873.

Newspaper published daily: *Pennsylvania Packet and General Advertiser*, Philadelphia, Sept., 1784.

Newsreel: Pathé Frères of Paris, in 1910, circulated a weekly issue of their *Pathé Journal*.

Oil well, commercial: Titusville, Pa., 1859.

Panel quiz show on radio: *Information Please*, May 17, 1938.

Postage stamps issued: 1847.

President pro tempore of the U. S. Senate: John Langdon, of New Hampshire, 1789.

Railroad, transcontinental: Central Pacific and Union Pacific railroads joined near Ogden, Utah, May 10, 1869.

Savings bank: The Provident Institute for Savings, Boston, 1816.

Science museum: Founded by Charleston (S. C.) Library Society, 1773.

Skyscraper: Home Insurance Co., Chicago, 1885 (10 floors, 2 added later).

Slaves brought into America: At Jamestown, Va., 1619, from a Dutch ship.

Sorority: Kappa Alpha Theta, at De Pauw University, 1870.

State to abolish capital punishment: Michigan, 1847.

State to enter Union after original 13: Vermont, 1791.

State to ratify U. S. Constitution: Delaware, Dec. 7, 1787.

Steam-heated building: Eastern Hotel, Boston, 1845.

Steam railroad (carried passengers and freight): Baltimore & Ohio, 1830.

Strike on record by union: Journeymen Printers, New York, 1776.

Subway: Opened in Boston, 1897.

"Tabloid" picture newspaper: *The Illustrated Daily News* (now *The Daily News*), New York City, 1919.

Vaudeville theater: Gaiety Museum, Boston, 1883.

Woman cabinet member: Frances Perkins, Secretary of Labor, 1933.

Woman candidate for President: Belva Ann Bennett Lockwood, National Equal Rights party, 1884.

Woman doctor of medicine: Elizabeth Blackwell; received M.D. from Geneva Medical College of Western New York, 1849.

Woman elected governor of a state: Mrs. Nellie Tayloe Ross, Wyoming, 1925.

Woman elected to U. S. Senate: Mrs. Hattie Caraway, Arkansas; elected Nov. 1932.

Woman graduate of law school: Mrs. Ada H. Kepley, Union College of Law, Chicago, 1870.

Woman member of U. S. House of Representatives: Jeannette Rankin; elected Nov. 1916.

Woman member of U. S. Senate: Mrs. Rebecca Latimer Felton of Georgia; appointed Oct. 3, 1922.

Woman suffrage granted: Wyoming Territory, 1869.

Written constitution: *Fundamental Orders of Connecticut*, 1639.

Zoo: Philadelphia, 1874.

Societies and Foundations

Source: Questionnaires to Societies and Foundations.

AMERICAN BIBLE SOCIETY: Founded 1816 to translate, publish and encourage wider distribution of Holy Scriptures.

BOY SCOUTS OF AMERICA: Founded 1910. Purpose is to promote character development, citizenship training and physical fitness for boys.

CAMP FIRE GIRLS, INC.: Founded 1910, to perpetuate spiritual ideals of the home and to stimulate and aid habits making for health and character. Educational-recreational program available to all girls from 7 to 18.

CARNEGIE CORPORATION OF NEW YORK: Founded 1911 by Andrew Carnegie to advance knowledge and understanding in U. S. and British Commonwealth. Grants awarded to colleges and organizations engaged in research. Assets (1956): \$184,000,000 (cost basis).

CARNEGIE ENDOWMENT FOR INTERNATIONAL PEACE: Founded 1910 by Andrew Carnegie. To work toward international peace. Assets (June 30, 1956): \$17,328,987.

AMERICAN ECONOMY

ALTHOUGH WE account for only 6.3% of the world's population, we own almost 50% of its wealth. We make, grow, build, sell, buy and use more goods and services than any other country in the world. Of our population of over 170 million people, about 66 million are employed, and over 43 million are enrolled in our schools and colleges (1957). Each year we spend more than \$266 billion on personal goods and services, of which \$81 billion go for food, tobacco and alcohol alone. According to the American Automobile Association we spend \$12 billion on vacations every year. Our personal savings amount to over \$21 billion annually, in addition to

which 4 out of every 5 families are covered by life insurance. Of our 50 million dwelling units, 55% are occupied by their owners. The millions of acres of fertile farmland produce more food than we can eat. Our productive capacity is the largest in the world: we own 29% of the world's railroad mileage, 71% of its automobiles, 51% of its trucks, 52% of its radios, 41% of its electric power output, 40% of its steel. Our natural resources are tremendous: each year we produce 53% of the world's output of petroleum and about 30% of its coal. Our merchant fleets have outstripped Britain's, and we have the greatest volume of foreign trade.

URANINUM

No production data are generally available. The AEC in Dec. 1956, however, announced U. S. figures for the first time,

estimating total U. S. reserves at 60,000,000 tons and total U. S. production at 3,000,000 tons of raw ore in 1956; this amounted to only 6,000 tons of usable uranium concentrate. Canada's reserves were estimated at 225,000,000 tons of ore. The most important deposits of uranium are probably in the Belgian Congo; also the Northwest Territories and elsewhere in Canada; and the Colorado plateau area of Colorado, New Mexico, Arizona and Utah in the United States. Deposits have also been found or reported in Alaska, Australia, Bolivia, Brazil, Bulgaria, Burma, Ceylon, Chile, China (Manchuria), Czechoslovakia, England, Ethiopia, Finland, France, Germany, Greenland,

Hungary, India, Indonesia, Iran, Japan, Madagascar, Mexico, Mozambique, Nigeria, Norway, Panama, Philippines, Portugal, Rumania, Sardinia, South Africa, Spain, Sweden and the U.S.S.R.

ZINC (thousands of metric tons, smelter, 1956)

1. United States	987.1 ¹

FEDERAL INCOME TAX

If you are a citizen or a resident of the United States, and if your gross income for the year amounts to \$600 or more, you are required to file a return. This requirement applies to minors, as well as adults, and must be met even if you do not pay a tax.

If you are more than 65 years old, you are required to file only if your gross income is \$1,200 or more.

You must pay part of your tax in installments in the year in which you earned the income. This is the "pay-as-you-go" system. You are generally required to pay the rest of your tax when you file your return. It may turn out that you don't owe any additional tax when you file your

return, or you may even be entitled to a refund, in which case the refund will be paid to you automatically after your return is filed.

The "pay-as-you-go" system works in two ways, through withholding and declaration of estimated tax. You may be subject to either or both of these requirements.

If you are married, you and your wife are allowed to report your combined income and your combined deductions on a single return. This is called a joint return. Your combined income is then taxed as though half were yours and half hers. This will usually result in a lower tax.

Withholding Table for Employees Paid Weekly

If the wages are—		And the number of withholding exemptions claimed is—

Over \$400,000	\$313,640, plus 91% of excess over \$400,000*

* The tax cannot in any event be more than 87% of combined taxable income.

SOCIAL SECURITY

The Social Security Act was passed in 1935 and subsequently amended in 1939, 1950, 1952 and 1954.

The act is administered by the Department of Health, Education and Welfare, of which the Social Security Administration is a part.

Old-Age, Survivors, and Disability Insurance

WHO IS COVERED?

Almost everyone who works fairly regularly. Self-employed doctors are the only large group not covered by this social security program.

To qualify for benefits or make payments possible for your survivors you must be in work covered by the law for a certain number of "quarters of coverage" after 1936 (for self-employment, after 1950). The number of quarters needed differs for different persons and depends on the date of your birth; in general, it is related to the length of time from 1936, from 1950, or from your twenty-first birthday and the time you reach retirement age. No one needs more than 40 quarters, and no one can qualify with less than 6. Your local social security office can tell you how long you need to work in covered employment under the present law.

WHO PAYS FOR THE INSURANCE?

Both workers and employers pay for the workers' insurance. Self-employed persons pay their own tax annually along with their income tax. Tax rates are scheduled to go up gradually until 1975:

Years	Workers and Employers Each to Pay	Self-employed' to Pay
1957-59.....	2¼%	3¾%
1960-64.....	2¾%	4¼%
1965-69.....	3¼%	4¾%
1970-74.....	3¾%	5¼%
1975 and after.....	4¾%	6¼%

HOW TO APPLY FOR BENEFITS

You apply for benefits by filing a claim either in person or by mail at your nearest social security office. You can get the address either from the post office or from the phone book under the listing, United States Government—Department of Health, Education and Welfare—Social Security Administration. You will need certain kinds of proof, depending upon the type of benefit you are claiming. If it is an old-age benefit, you should have proof of age. A wife claiming old-age benefits based on her husband's earnings should have both proof of age and a copy of the marriage certificate. In the case of survivors' benefits, you will need a copy of the death certificate of the deceased worker. If formal proof is not available, the social security office will tell you what kinds of information will be acceptable.

WHAT DOES SOCIAL SECURITY OFFER?

The social security tax you pay gives you three different kinds of protection: (1) retirement benefits, (2) survivors' benefits, and (3) disability benefits.

Retirement benefits. A man becomes eligible for an old-age benefit at age 65, if he has retired under the definition in the law. A woman worker also is eligible for a full old-age benefit at 65, but she may retire at 62 and get 80% of her full benefit for the rest of her life. The closer she is to age 65 when she starts collecting her benefit, the larger the fraction of her full benefit she will get.

The amount of the old-age benefit you are entitled to is the key to all other benefits under the program. The old-age benefit is based on average monthly earnings, generally those after 1950. (Amounts over \$4,200 a year are not counted.) The table on page 796 gives examples of benefits.

Using the table as a guide, you will see that average monthly earnings of \$300

would give you a benefit of \$98.50 a month when you retire at 65.

If your wife is also 65, then she will get a wife's benefit that is equal to half your benefit. So if your benefit is \$98.50 your wife gets \$49.30 (cents are rounded to the nearest dime).

If your wife is younger than you, but not under 62, she can draw a reduced benefit that depends on the number of months before she will be 65. If she draws her benefit when she is 62, she will get about ¾ of your basic benefit, or \$37. (She will get this amount for the rest of her life, unless you should die first; then she can start getting the full widow's benefit, described below.)

If your wife is entitled to a worker's old-age benefit on her own earnings she can draw whichever—the worker's or the wife's—is larger. No one can draw two benefits at the same time.

If you have children under 18 when you retire, they will get a benefit equal to half your benefit, and so will your wife, in that case, even if she is under 62. However, total benefits based on your earnings cannot be more than \$200 a month or 80% of your average monthly wage. When your children reach age 18, their benefits will stop, except a benefit that is going to a child who is permanently and totally disabled. Such a child can continue to get his benefit as long as his disability meets the definition in the law.

If you are a woman worker entitled to an old-age benefit and you have a dependent husband aged 65 or over, he may draw a benefit similar to a wife's benefit at 65.

Survivor benefits. This feature of the social security program gives you valuable life insurance protection—in some cases over \$30,000 worth. The amount of protection is again geared to what the worker would be entitled to at 65. If you can estimate from the table what your basic monthly benefit would be at 65, this is what your survivors would get:

1. A cash payment to cover your burial expenses. This comes to 3 times the basic monthly benefit but no more than \$255.

2. A benefit for each child until he reaches 18. If there is only one child eligible, he gets 75% of the basic benefit. If there are two or more children, each one gets 50% of the basic benefit and an additional 25% is split among them. (A disabled child can continue to collect benefits after age 18.)

3. A mother's benefit for your widow, if she has children under 18 in her care. Her benefit is 75% of the basic benefit. She can collect this until the youngest child reaches 18. Payments stop then (they

What Benefits You Get Under Social Security

Based on an average monthly wage of	Retirement benefits			Survivors' benefits		
	Worker's monthly benefit ¹	Worker with 62-year-old wife	Worker with 65-year-old wife	Widow and 1 child	Widow and 2 children	Widow age 62 ²
\$100.....	\$ 55.00	\$ 75.70	\$ 82.50	\$ 82.60	\$ 82.60	\$41.30
150.....	68.50	94.30	102.80	102.80	120.00	51.40
200.....	78.50	108.00	117.80	117.80	157.10	58.90
250.....	88.50	121.80	132.80	132.80	177.20	66.40
300.....	98.50	135.50	147.80	147.80	197.10	73.90
350.....	108.50	149.30	162.80	162.80	200.00	81.40

¹ Also indicates amount worker aged 50-64 would get if disabled. ² Also indicates amount that would be paid to only child or parent.

will start again when she is 62). If she has a disabled child in her care who is getting a benefit after 18, then her benefit continues, too.

Total family benefits cannot go over \$200 a month or 80% of your average monthly wage.

4. If there are no children under 18, your wife can get a widow's benefit starting at age 62. This would come to 75% of the basic benefit.

5. Dependent parents can sometimes collect survivors' benefits, if the deceased worker leaves no wife or child. They are usually eligible if: (a) they were getting at least half their support from the deceased worker when he died, (b) they have reached retirement age (65 for the father, 62 for the mother), and (c) they are not eligible for an old-age benefit based on their own earnings. Each parent would then get 75% of the basic benefit.

A woman worker can provide survivors' benefits for any of these dependents, if she has been contributing at least half their support: (1) her children under age 18, (2) her disabled child after 18, if the child is unmarried and was disabled before 18, and (3) her dependent widowed husband at age 65, if he hasn't remarried. Or, if she had no other dependents, her parents could collect benefits if they met the tests in paragraph (5) above.

Here is an example of survivors' benefits in one family situation: John Jones dies, leaving a wife and two children aged one and three. His average monthly wage was \$300. This would have given him an old-age benefit of \$98.50, if he had lived to 65. This is what his family gets: (1) a cash burial payment of \$255; (2) a total monthly benefit of \$123.20 for the two children; and (3) a \$73.90 monthly benefit for Mrs. Jones. Total benefits for the family come to \$197.10 a month while the two children are under 18. When the older child reaches 18 his benefits stop, but the younger child's benefit is raised

to \$73.90 a month. Mrs. Jones and the younger child then collect a total of \$147.80 a month for two years until the child reaches 18. Then all payments stop. When Mrs. Jones becomes 62 (assuming she hasn't remarried), she will again be paid \$73.90 a month.

Disability benefits. These are a new feature of the social security insurance system. Disability benefits are paid to two groups of people:

1. An insured worker with a total disability can collect his full old-age benefit at age 50, instead of waiting until 65. However, no benefits will be paid to his dependents until he reaches 65. To be eligible for disability benefits, a person must: (a) have worked in employment (or self-employment) covered by social security for about 5 out of the 10 years before he became disabled; (b) be suffering from a physical or mental disability of indefinite duration; and (c) be so disabled that he can't work, or at least "engage in any substantial gainful activity." If he meets those tests, his benefits will start after a 6-month waiting period.

The applicant is referred to the State vocational rehabilitation agency and, if rehabilitation services are proposed and the applicant refuses them without good cause, his disability benefit is suspended. If the worker gets workmen's compensation benefit or another federal benefit based on disability, his disability benefit is reduced by the amount of such benefit—except that a benefit paid by the Veterans Administration because of service-connected disability will not result in any reduction.

2. The permanently disabled child of a deceased or retired person who was covered by social security can collect benefits after age 18 (when children's benefits are ordinarily cut off). If the child is eligible, his mother can also get a benefit. The child must: (a) have been disabled before age 18 (but he need not have been drawing benefits before 18), (b) be unmarried,

and (c) have been dependent on the deceased or retired worker for at least half his support. The child's benefit would be 75% of the father's basic benefit and his mother would get the same amount. A disabled child can get a benefit based on his mother's earnings, instead of his father's, if she has contributed to at least half his support and has died or is drawing an old-age benefit.

The disabled child's benefit can actually be paid to adults, if the above tests are met. For example, an unmarried person, aged 40, who was born blind and is dependent on his father for support can collect a disabled child's benefit as soon as his father starts drawing an old-age benefit or dies.

YOU CAN EARN INCOME WITHOUT LOSING BENEFITS

If you are 72 or over, you can earn any amount. If you are under 72, you can earn \$1,200 a year without losing any benefits. (Only earned income is counted, not pensions, dividends, etc.) For each \$80 (or fraction of \$80) over \$1,200, you can lose one month's benefit. For example, \$1,290 could cancel two months' benefits, and \$2,081 could mean loss of the whole year's benefits. But you will not lose the benefit for any month in which you did not work as an employee for \$80 or more and did not perform substantial services in self-employment. For example, if you earned \$3,000 in 3 months and were idle the rest of the year, you would lose only 3 months' benefits.

When a man and wife are drawing old-age benefits based on his earnings, the wife will lose her benefit in any month that the husband loses his. But if a widow with young children loses her benefits by working, the children will continue to get theirs.

If you earn over \$1,200 a year while drawing benefits (and are under 72), you must report those earnings.

HOW TO PROTECT MY SOCIAL SECURITY ACCOUNT

1. *Always show your social security card when you start a new job.* In that way you will be sure that your earnings will be credited to your social security account and not someone else's. If you lose your social security card, apply for a new one. When a woman marries, she should apply for a new card showing her married name.

2. *Make a periodic check of earnings credited to your social security account.* You can do this by mailing postcard Form OAR-7004 to the Social Security Administration, Baltimore, Md. (You can get this

form at any social security office.) The reply will show total wages credited to your account since 1936 or when you started working. It's a good idea to check once every three years and prevent errors.

3. *If you should become permanently disabled, have your social security credits "frozen."* Social security benefits are usually based on your average earnings up to the date of death or retirement. A long period of sickness or disability could lower your average earnings and thus cut down or even eliminate the eventual benefit you or your family might get. But you can avoid this reduction in benefits by applying for a disability determination at your local social security office. Then the period of disability will not be counted.

PUBLIC ASSISTANCE

Aid to four groups of needy persons is provided under the Social Security Act through assistance programs administered by the states with grants from the Federal government. The Federal share of the individual payment, for the aged, the blind, and the disabled is 4/5 of the first \$30 of the average monthly payment plus half the balance, up to the \$60 maximum specified in the law. A blind person may earn up to \$50 a month and have such earnings disregarded when the state is determining whether he is needy. For aid to dependent children, the Federal government pays 14/17 of the first \$17 paid per person per month plus 1/2 the balance within the maximums (\$32 for one needy adult, \$32 for the first child, and \$23 for each additional child). To be eligible a child must be (1) under 18; (2) without parental support or care because of the death, absence from the home, or incapacity of a parent and (3) living with a parent or specified relative.

The law also permits federal sharing in the payments to doctors and others for medical care in behalf of needy persons—beyond what such persons get directly in their assistance payment.

Unemployment Insurance

Unemployment insurance is managed jointly by the states and the national government. Most states began paying benefits in 1938 and 1939.

UNDER WHAT CONDITIONS CAN THE WORKER COLLECT

The laws vary from state to state. In general, a waiting period of one week is required before collecting unemployment insurance; the worker must be able to work, must not have quit without good cause or have been discharged for misconduct; he must not be involved in a

* This will be increased for unemployed persons with dependents.

labor dispute; above all, he must be willing to take a job in his field at prevailing wage rates. Other restrictions on payments involve leaving for marriage, pregnancy or further education.

The unemployed worker must go to the local state employment service office to register his claim for unemployment benefits and must register for work. If a suitable opening is available in his field, he must accept it or lose his unemployment payments. If a worker moves out of his own state, he can still collect at his new residence; the state where he is now located will act as agent for the other state, which pays his benefits.

WHO PAYS FOR THE INSURANCE?

The cost is borne by the employer in all but two states and Alaska. Each State (Alaska excepted) has a sliding scale of rates. The standard rate is set at 2.7% of taxable payroll in most states. But employers with records of steady employment (that is, few layoffs) are rewarded with rates lower than the standard 2.7%. The average rate for employers in 1956 was 1.3%. Tax is payable on only the first \$3,000 of a worker's pay, except in Delaware, Nevada, Oregon, and Rhode Island, where the limit is set at \$3,600, and in Alaska where the limit is \$4,200. Employees as well as employers pay a tax in

Alabama (0.1%), New Jersey (¼ of 1%), and Alaska (½ of 1%).

Employers pay an additional unemployment tax to the Federal Government—0.3% of the \$3,000 paid to each employee. This money is returned to the states in the form of federal grants for administrative expenses of the program; any amounts over these costs, up to \$200 million, is put in a special loan fund on which the states may draw when their payment funds are low, and the rest of the excess is assigned to the states to supplement the grants for administrative costs.

WHO IS COVERED AND WHO IS NOT?

Requirements vary from state to state, but all states cover firms having at least 4 employees for 20 weeks or more a year. In some states, firms with only one employee are covered. Certain classes of workers are specifically exempt under some or all state laws: farm workers, domestic workers, members of the employer's family, insurance agents on commission, workers in nonprofit organizations, student nurses, internes and casual labor.

Railroad Workers

These are covered by the Railroad Retirement Act, passed in 1935 and amended in 1937 and 1946. The social security provisions of this act are administered by the Railroad Retirement Board.

THE UNITED NATIONS

Its Major Cases and Actions

IRAN

Iran presented the first case before the Security Council on Jan. 19, 1946, demanding an end to Russian "interference" in Azerbaijan province, which Russia had brought under its control through a puppet government. Iran also demanded that Russia keep her promise to withdraw all occupation troops by Mar. 2. The Council kept the matter on the agenda. Russia withdrew her troops May 6.

GREECE

On Dec. 3, 1946, Greece complained to the Security Council that Communist-led rebels in northern Greece were being aided by Albania, Bulgaria and Yugoslavia. The Council named an investigating committee, which reported May 23, 1947, that those 3 nations were guilty. A Russian veto of July 29 prevented the Council's acceptance of the report. In Sept. 1948, the U. N. Balkan Commission, which continued to watch developments, again condemned the 3 nations for continuing aid to the Greek rebels. However, 3 months previously, on June 28, 1948, Marshal Tito's Yugoslavia had broken with Moscow. Thereafter, the Greek Communist-led rebellion faded out.

ATOMIC ENERGY CONTROL

On Dec. 31, 1946, a U. N. commission of 11 nations recommended the "Baruch plan" sponsored by the U. S. for international control and inspection. Only Russia dissented. In June 1947, she submitted a vastly different control plan, limiting international inspection so greatly that the secret making of atomic bombs could not be discovered. On May 17, 1948, the U. N. commission voted (9-2) to suspend work on international atomic control, blaming Russia for the deadlock. A Russian veto of June 22 prevented the Security Council from approving the majority-approved control plan. The topic then went to the General Assembly, which, on Nov. 4, 1948, adopted (40-6) the U. S.-sponsored plan; but nothing could be done to put it into effect because of Soviet-bloc opposition.

PALESTINE

A General Assembly special session met Apr. 28, 1947, at the request of Great Britain to consider Palestine. An 11-nation investigating committee recommended Aug. 31 that Britain give up control and that an Arab and a Jewish state be established. This partition plan was approved by the

Assembly in Nov. 1947, but proved impossible to enforce.

Britain ceased to govern Palestine on May 14, 1948. Israel proclaimed her independence and was attacked by 5 neighboring Arab nations. The U. N. made 6 appeals to both sides to stop the war; the last brought about a truce from June 11 to July 9. Intermittent fighting took place thereafter. Count Folke Bernadotte, the U. N. mediator, was murdered Sept. 17 near Jerusalem. He was succeeded by Dr. Ralph J. Bunche.

Israel signed an armistice with Egypt on Feb. 24, 1949, and with Jordan on Apr. 3. On May 11, the U. N. voted (37-12) to admit Israel as the 59th member.

INDONESIA

On July 30, 1947, Australia called the Security Council's attention to the fighting between the Netherlands and the Indonesian Republic. The Council, on Aug. 1, ordered both sides to cease hostilities. A Good Offices Commission was sent to Indonesia, and it effected a truce Jan. 17, 1948. In Dec. 1948, the Dutch attacked Jakarta, then the Indonesian capital, and the Council again issued a cease-fire order. Dutch troops were withdrawn from around Jakarta in July 1949. Indonesia thereafter peacefully achieved independence from the Netherlands.

ITALIAN COLONIES

On Sept. 15, 1948, after 3 years of argument, the Big 4 failed to agree on the disposition of the colonies which the peace treaty required Italy to give up. So, by a clause in the treaty, the question was referred to the General Assembly for settlement. The Assembly decided Nov. 21, 1949, that Libya should become independent on Jan. 1, 1952, and that Somaliland should be a U. N. trusteeship under Italian administration for 10 years, after which it would be independent. Eritrea was later federated with Ethiopia.

INDIA-PAKISTAN

On Jan. 2, 1948, India appealed to the U. N. to stop alleged aggression by Pakistan. Fighting had broken out over which nation should control the province of Kashmir. The Security Council sent a commission, which proposed that Kashmir's future be determined by a plebiscite. The Council agreed on Apr. 21, but both sides raised objections. Early in 1949, the U. N. commission succeeded in obtaining

a truce; and, on Mar. 14, 1950, the Council substituted a mediator, who was to seek demilitarization of the areas of Kashmir held by India and Pakistan and to try for a plebiscite. Two mediators failed.

RUSSIAN BOYCOTT

Soviet Delegate Malik walked out of the Security Council on Jan. 13, 1950, because it had refused (6-3) Russia's demand that Nationalist China be replaced in the U. N. by Communist China. The boycott ended on Aug. 1. Again the Council voted (8-3) to refuse membership to Communist China.

KOREA

Russia occupied the northern half of Korea after World War II, and the U. S. occupied the southern half below the 38th parallel. The understanding was that the occupying powers would set up an independent republic to govern the entire country. Russia refused to co-operate. The U. S. then referred the problem to the U. N., and the General Assembly voted Nov. 5, 1947, to send a commission to Korea to set up a free government. Russia, however, boycotted the commission and refused to allow it to enter North Korea. The commission therefore supervised free elections in South Korea and assisted in setting up the Republic of Korea with its capital at Seoul.

HUNGARY

Sparked by student demonstrations, street riots in Hungary in Oct. 1956, took on the proportions of rebellion. The Communist government called for Soviet help, and Russian tanks rolled into Budapest on Oct. 24. The Communists sought to appease the rebellious people by putting in as Premier a man, Imre Nagy, who had been ousted from the party as a "Titoist."

Nagy promised to throw off Russian shackles, and by Nov. 1, Russian tanks and troops had withdrawn from Budapest. On Nov. 4, however, the Russian tanks returned in force, shooting freely and killing civilians. The Russians set up a new puppet government headed by János Kadar.

The General Assembly on Nov. 4, in a special session, called on Russia to get its troops out of Hungary "without delay."

In the ensuing 6 weeks, the General Assembly passed 4 more resolutions about the Soviet crushing of Hungary.

One of the resolutions (Dec. 12, 1956) was an outright condemnation of Russia for "violation of the Charter by the

U.S.S.R. in depriving Hungary of its liberty and independence." The vote was 55 to 8, which constituted a world-wide indictment.

The General Assembly decided in January 1957 to name a five-man committee to investigate from outside Hungary. On it were representatives of Denmark, Tunisia, Uruguay, Ceylon and Australia.

The committee heard testimony from 111 Hungarians, mainly refugees, in Europe and America. It reported unanimously on June 20, 1957, that the Hungarian uprising had been a spontaneous revolt of the people and that the crushing of the revolt by Soviet Russian troops had cost between 2,500 and 3,000 lives.

Meanwhile, people had begun fleeing from Communist Hungary on a mass scale almost unprecedented. By the end of April 1957, some 175,000 Hungarians had sought asylum in Austria and about 20,000 others in Yugoslavia.

Within a few months the U. N. alone collected more than \$7 million. 39 countries opened their doors to more than 120,000 of the Hungarian refugees.

SUEZ

On Oct. 29, 1956, Israeli armed forces launched a major attack into the Gaza Strip and into Egypt's Sinai Desert territory.

An emergency special session of the U. N. General Assembly adopted on the night of Nov. 1-2, by a vote of 64 in favor, 5 against, 6 abstentions, a United States resolution calling upon all parties involved in hostilities in the area to agree to an immediate cease-fire. By that time, Britain and France were involved in the fighting.

Heeding the General Assembly call, Britain and France announced on Nov. 3 that they would stop military action.

By direction of the General Assembly, a United Nations Emergency Force was established to keep the peace. The first units landed at Ismailia, midway point on the Suez Canal, on Nov. 11, 1956.

On Feb. 21, Israel agreed to pull out its last troops if the U. N. Emergency Force stationed peace-keeping troops on the Aqaba Gulf and in the Gaza Strip. The U. N. Emergency Force troops were so stationed, and they became the first uniformed peace-preserving unit in the history of the U. N.

The nations which contributed troops were Brazil, Canada, Colombia, Denmark, Finland, India, Norway, Sweden and Yugoslavia.

¹ Declaration of United Nations was originally signed by 26 nations in Washington, D. C., on Jan. 1, 1942. ² U. N. officially came into existence Oct. 24, 1945. ³ League was formally dissolved Apr. 18, 1946. Nations withdrawing before that time did so voluntarily, except U.S.S.R., which was expelled. Other members of League were: Estonia (1921-46), Germany (1926-35), Latvia (1921-46), Lithuania (1921-46), Switzerland (1920-46). ⁴ Admission as separate nation approved at San Francisco Conference. ⁵ Invited to attend San Francisco Conference June 5, 1945, after its liberation. ⁶ Not represented at San Francisco Conference, but subsequently signed Charter as original member.

United Nations Headquarters

The first regular session of the General Assembly held at Central Hall, Westminster, London, voted that Interim Headquarters of the Organization should be located in New York. In August 1946, an Interim Headquarters was set up at Lake Success on Long Island, in a part of the Sperry Gyroscope Co.'s plant. The New York City building at Flushing Meadow, site of the 1939 World's Fair, was converted for the use of the General Assembly. The search for a permanent home ended in December 1946, when the General Assembly accepted an offer from John

D. Rockefeller, Jr., of \$8,500,000 for the purchase of the present Headquarters site—an 18-acre tract alongside Manhattan's East River. The U. S. Government loaned the U. N. \$65,000,000 interest free, which is being repaid in annual installments.

Architectural plans drawn up by an international Board of Design were approved by the Assembly, and construction began in September 1948. By mid-1950, the 39-story Secretariat Building was ready for occupancy, and in the spring of 1951 "United Nations, New York" became the Organization's permanent address.

Principal Organs of the United Nations

(For functions, see Charter, pp. 307-19. For officers of Secretariat and member nations of councils, see pp. 804-05.)

SECRETARIAT

Secretary-General

Dag Hammarskjöld, of Sweden, Apr. 10, 1953, to the present.

Former Secretary-General

Trygve Lie, of Norway, Feb. 1, 1946, to Apr. 10, 1953.

GENERAL ASSEMBLY

The General Assembly is composed of all member states. It does most of its work in committees, of which there are 4 types: main, procedural, standing and ad hoc.

Main Committees

First Committee (Political and Security, including the regulation of armaments).
Special Political Committee.

Second Committee (Economic and Financial).

Third Committee (Social, Humanitarian and Cultural).

Fourth Committee (Trusteeship, including Non-Self-Governing Territories).

Fifth Committee (Administrative and Budgetary).

Sixth Committee (Legal).

Presidents of the General Assembly

Paul-Henri Spaak, of Belgium, 1946, First Session.

Oswaldo Aranha, of Brazil, 1947, First Special Session and Second Regular Session.

Dr. José Arce, of Argentina, 1948, Second Special Session.

Herbert V. Evatt, of Australia, 1948, Third Session.

Carlos P. Romulo, of the Philippines, 1949, Fourth Session.

Nasrollah Entezam, of Iran, 1950, Fifth Session.

Luis Padilla Nervo, of Mexico, 1951, Sixth Session.

Lester B. Pearson, of Canada, 1952, Seventh Session.

Mrs. Vijaya Lakshmi Pandit, of India, 1953, Eighth Session.

Elco N. van Kleffens, of the Netherlands, 1954, Ninth Session.

José Maza, of Chile, 1955, Tenth Session.

Prince Wan Waihayakon, of Thailand, 1956-57, Eleventh Session.

Sir Leslie Munro, of New Zealand, 1957-58, Twelfth Session.

SECURITY COUNCIL

The Security Council is composed of 5 permanent members—China, France, the U.S.S.R., the United Kingdom and the U. S. There are 6 nonpermanent members serving 2-year terms.

The Military Staff Committee is composed of the Chiefs of Staff of the 5 permanent members or their representatives; the Disarmament Commission, established by the General Assembly under the Security Council, has the same membership as the Council, plus Canada when not a member of the Council.

ECONOMIC AND SOCIAL COUNCIL

The Economic and Social Council is composed of 18 nonpermanent members serving 3-year terms.

Functional Commissions

Transport and Communications Commission.

Statistical Commission.

Population Commission.

Social Commission.

Commission on Human Rights.

Commission on the Status of Women.

Commission on Narcotic Drugs.

Commission on International Commodity Trade.

Regional Economic Commissions

Economic Commission for Europe.

Economic Commission for Asia and the Far East.

Economic Commission for Latin America.

TRUSTEESHIP COUNCIL

The Trusteeship Council is composed of 14 members—seven members—Australia, Belgium, France, Italy, New Zealand, the United Kingdom and the U. S., which administer trust territories; China and the U.S.S.R., other permanent members of the Security Council which do not administer trust territories, and 5 other members elected by the General Assembly serving 3-year terms. This arrangement ensures that the total number of Council members is equally divided between those U. N. members which administer trust territories and those which do not.

The Trusteeship Agreements concern the following territories (the Administering Authority in each case is in *italics*):

Nauru—*Australia* (on behalf of *Australia*, *New Zealand* and the *United Kingdom*).

New Guinea—*Australia*.

Ruanda-Urundi—*Belgium*.

Cameroons } *France*.

Togoland } *France*.

Somaland—*Italy*.

Western Samoa—*New Zealand*.

Cameroons } *United Kingdom*.

Tanganyika } *United Kingdom*.

The Territory of the Pacific Islands—composed of the former Japanese-mandated islands of the Marshalls, Marianas (with the exception of Guam) and Carolines—is a strategic Trust Territory administered by the U. S.

The General Assembly decided at its Fourth Session in 1949 that former Italian Somaliland was to be placed under the Trusteeship System for 10 years, at the end of which time (that is, in 1960) it would become independent. Italy became the Administering Authority on Apr. 1, 1950.

Specialized Agencies

International Labour Organisation (ILO)

Established: Apr. 11, 1919, when constitution was adopted as Part XIII of Treaty of Versailles.

Purposes: To contribute to establishment of lasting peace by promoting social justice; to improve, through international action, labor conditions and living standards; to promote economic and social stability.

Headquarters: Geneva, Switzerland.

Food and Agriculture Organization of the United Nations (FAO)

Established: Oct. 16, 1945, when constitution became effective.

Purposes: To raise nutrition levels and living standards; to secure improvements in production and distribution of food and agricultural products.

Headquarters: Viale delle Terme Di Caracalla, Rome, Italy.

United Nations Educational, Scientific and Cultural Organization (UNESCO)

Established: Nov. 4, 1946, when 20th signatory to constitution deposited instrument of acceptance with government of United Kingdom.

Purposes: To promote collaboration among nations through education, science and culture in order to further justice, rule of law and human rights and freedoms without distinction of race, sex, language or religion.

Headquarters: 19 Ave. Kléber, Paris 16, France.

World Health Organization (WHO)

Established: Apr. 7, 1948, when 26 members of the United Nations had accepted its constitution adopted July 22, 1946, by International Health Conference in New York City.

Purposes: To aid attainment by all peoples of the world of highest possible level of health.

Headquarters: Palais des Nations, Geneva, Switzerland.

International Bank for Reconstruction and Development (Bank)

Established: Dec. 27, 1945, when Articles of Agreement drawn up at Bretton Woods Conference in July, 1944, came into force. Began operations June 25, 1946.

Purposes: To assist in reconstruction and development of economies of members by making loans directly and promoting private foreign investment; to promote balanced growth of international trade.

Headquarters: 1818 H St., NW, Washington 25, D. C.

International Finance Corporation (IFC)

(Affiliate of International Bank)

Established: Charter of IFC came into force on July 20, 1956. Although IFC is affiliated with the International Bank, it is a separate legal entity and its funds are entirely separate from those of the Bank. However, membership in the Corporation is open only to Bank members.

Purposes: Its objective is to further economic development by encouraging the growth of productive private enterprise in its member countries, particularly in the less developed areas. It is empowered to invest in productive private enterprises in association with private investors, and without government guarantee of repayment in cases where sufficient private capital is not available on reasonable terms; and to serve as a clearing house to bring together investment opportunities, private capital, both foreign and domestic, and experienced management.

Headquarters: 1818 H St., NW, Washington, D. C.

International Monetary Fund (Fund)

Established: Dec. 27, 1945, when Articles of Agreement drawn up at Bretton Woods Conference in July 1944 came into force. Fund began operations on March 1, 1947.

Purposes: To promote international monetary co-operation and expansion of international trade; to promote exchange stability; to assist in establishment of multilateral system of payments in respect of current transactions between members.

Headquarters: 1818 H St., NW, Washington 25, D. C.

International Trade Organization (ITO) (General Agreement on Tariffs and Trade (GATT))

Established: Although establishment of ITO and the bringing into operation of the Havana Charter, on which it was to be based, have not taken place, one of the main objectives of that Charter has

been embodied in an international commercial treaty, known as the General Agreement on Tariffs and Trade (GATT). Provision has been made for a permanent Organization for Trade Cooperation (OTC) to administer GATT and to come into being when it has been accepted by countries which account for a high proportion of world trade.

Inter-Governmental Maritime Consultative Organization (IMCO)

Established: Will come into existence when 21 nations, of which 7 must each have a total tonnage of at least one million gross tons of shipping, have become parties to convention drawn up by U. N. Maritime Conference at Geneva, Feb. 19 to Mar. 6, 1948. (Preparatory Committee established by Conference will cease to exist after IMCO comes into being.)

Purposes: To promote co-operation among governments in technical problems of international shipping and to encourage removal of discriminatory action by governments and of unfair restrictive practices by shipping concerns.

Headquarters: To be in London.

International Atomic Energy Agency (IAEA)

Established: Statute for IAEA, approved on October 26, 1956 at a conference held at U. N. Headquarters, New York, came into force on July 29, 1957. The Agency's working relationship with the United Nations, however, is to be determined at the first General Conference of IAEA, scheduled for October 1, 1957 at Vienna.

Purposes: To promote the peaceful uses of atomic energy, and to ensure that assistance provided by it or at its request or under its supervision or control is not used in such a way as to further any military purpose.

Headquarters: To be in Vienna, Austria.

Other Agencies are: Int'l Civil Aviation Org., Universal Postal Union, Int'l Telecommunication Union and World Meteorological Org.

United Nations Costs

U. N. budget appropriations for 1957 were \$50,815,700. Member states contribute on a scale determined by the General Assembly. In 1957, the U. S. paid $\frac{1}{3}$ of the cost, the U.S.S.R.* paid 13.96% and the U. K. paid 7.81%.

Judges of the International Court of Justice

(Judges serve for a 9-year term and may be re-elected. Expiration dates of terms are shown in parentheses. All terms expire February 5 of the year designated. The seat of the Court is The Hague, Netherlands.)

President: Green H. Hackworth, U. S. (1961)

Vice President: Abdel Hamid Badawi, Egypt (1967)

E. C. Armand-Ugon, Uruguay (1961)

Jules Basdevant, France (1964)

Roberto Córdova, Mexico (1964)

José Gustavo Guerrero, El Salvador (1964)

Mohammad Zafrulla Khan, Pakistan (1961)

Helge Klaestad, Norway (1961)

F. I. Kojevnikov, U.S.S.R. (1961)

Hersch Lauterpacht, U. K. (1964)

L. M. Moreno Quintana, Argentina (1964)

Sir Percy Spender, Australia (1967)

Bohdan Winiarski, Poland (1967)

Jean Spiropoulos, Greece (1967)

V. K. Wellington Koo, China (1967)

Officers of the Secretariat

Andrew W. Cordier, Executive Assistant to the Secretary-General.

Constantin Stavropoulos, Legal Counsel.

Bruce R. Turner, Controller.

J. A. C. Robertson, Director of Personnel.

Ralph J. Bunche, Undersecretary.*

A. Dobrynin, Undersecretary.*

Dragoslav Protitch, Undersecretary, Dept.

of Political and Security Council Affairs.

Philippe de Seynes, Undersecretary, Dept.

of Economic and Social Affairs.

Martin Hill, Deputy Undersecretary, Dept.

of Economic and Social Affairs.

Benjamin Cohen, Undersecretary, Dept. of

Trusteeship and Information from Non-

Self-Governing Territories.

* Duties not confined to a single department.

Ahmed S. Bokhari, Undersecretary, Dept. of Public Information.

Alfred G. Katzin, Deputy Undersecretary, Dept. of Public Information.

Victor Hoo, Undersecretary, Dept. of Conference Services.

David V. Vaughan, Director, Office of General Services.

Hugh L. Keenleyside, Director General, Technical Assistance Administration.

Gustavo Martínez Cabañas, Deputy Director General, Technical Assistance Administration.

Maurice Pate, Executive Director, U. N. Children's Fund (UNICEF).

David Owen, Executive Chairman, Technical Assistance Board.

Security Council

Representatives (as of Sept. 1957)*

Australia: E. Ronald Walker.
 China: Tingfu F. Tsiang.
 Colombia: Alfonso Araujo.
 Cuba: Emilio Nuñez-Portuondo.
 France: Guillaume Georges-Picot.
 Iraq: Moussa Al-Shabandar.
 Philippines: General Carlos P. Romulo.
 Sweden: Gunnar V. Jarring.
 U.S.S.R.: Arkady A. Sobolev.
 United Kingdom: Sir Pierson Dixon.
 United States: Henry Cabot Lodge, Jr.

* In Oct. 1957, Japan, Panamá and Canada were elected for terms beginning Jan. 1, 1958. They replace Philippines, Cuba and Australia.

Economic and Social Council

Representatives (24th session, July-August 1957)*

Argentina: Mariano José Drago.
 Brazil: Henrique de Souza Gomes.
 Canada: R. A. Mackay.
 China: Cheng Paonan.
 Dominican Republic: Salvador Ortiz.
 Egypt: El Attafi Sinbel.
 Finland: Mrs. Tyyne Leivo-Larsson.
 France: Pierre Abelin.
 Greece: Georges Bensis.

Elected Member States Serving Terms on U. N. Councils

Security Council

Jan. 1946-Dec. 1946: Egypt; Mexico; Netherlands.
 Jan. 1946-Dec. 1947: Australia; Brazil; Poland.

* Permanent representatives to U. N. as of Sept. 1957. Not all nations maintain permanent missions.

U. S. Permanent Mission to U. N.

Henry Cabot Lodge, Jr.; Ambassador Extraordinary and Plenipotentiary, Permanent Representative to U. N.
 James J. Wadsworth; Ambassador Extraordinary and Plenipotentiary, Deputy Representative to U. N.
 James F. Barco; Minister, Deputy Representative on Security Council, Counsellor of Mission.
 Mason Sears; Representative on Trusteeship Council.
 Nell H. Jacoby; Representative on Economic and Social Council.
 Albert S. Watson; Executive Director.
 Albert F. Bender, Jr.; Adviser, Legal and International Organization Affairs.

U. S. Delegation to the 12th Session of the General Assembly (starting September 17, 1957)

Representatives

Henry Cabot Lodge, Jr. George Meany
 Walter H. Judd Herman Wells
 A. S. J. Carnahan

Alternate Representatives

James J. Wadsworth Genoa S. Washington
 Mrs. Oswald B. Lord Miss Irene Dunne
 Philip M. Klutznick

The Secretary of State, John Foster Dulles, will serve as Chairman of the U. S. Delegation, *ex officio*, during his presence at the session.

The U. N. Flag

The United Nations has its own flag, which is light blue. In the center is the U. N. symbol, a polar map of the world

embraced by olive branches, in white. The General Assembly adopted the flag on October 20, 1947.

CHARTER OF THE UNITED NATIONS

WHE the peoples of the United Nations determined to save succeeding generations from the scourge of war, which twice in our lifetime has brought untold sorrow to mankind, and

To reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men and women and of nations large and small, and

To establish conditions under which justice and respect for the obligations arising from treaties and other sources of international law can be maintained, and

To promote social progress and better standards of life in larger freedom, and for these ends

To practice tolerance and live together in peace with one another as good neighbors, and

To unite our strength to maintain international peace and security, and

To insure, by the acceptance of principles and the institution of methods, that armed force shall not be used, save in the common interest, and

To employ international machinery for the promotion of the economic and social advancement of all peoples, have resolved to combine our efforts to accomplish these aims.

Accordingly, our respective Governments, through representatives assembled in the city of San Francisco, who have exhibited their full powers found to be in good and due form, have agreed to the present Charter of the United Nations and do hereby establish an international organization to be known as the United Nations.

CHAPTER I

Purposes and Principles

Article 1

The purposes of the United Nations are:

1. To maintain international peace and security, and to that end: to take effective collective measures for the prevention and removal of threats to the peace, and for the suppression of acts of aggression or other breaches of the peace, and to bring about by peaceful means, and in conformity with the principles of justice and international law, adjustment or settlement of international disputes or situations which might lead to a breach of the peace;

2. To develop friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples, and to take other appropriate measures to strengthen universal peace;

3. To achieve international cooperation in solving international problems of an economic, social, cultural, or humanitarian

character, and in promoting and encouraging respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion; and

4. To be a center for harmonizing the actions of nations in the attainment of these common ends.

Article 2

The Organization and its Members, in pursuit of the Purposes stated in Article 1, shall act in accordance with the following Principles:

1. The Organization is based on the principle of the sovereign equality of all its Members.

2. All Members, in order to ensure to all of them the rights and benefits resulting from membership, shall fulfill in good faith the obligations assumed by them in accordance with the present Charter.

3. All Members shall settle their international disputes by peaceful means in such a manner that international peace and security, and justice, are not endangered.

4. All Members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any state, or in any other manner inconsistent with the Purposes of the United Nations.

5. All Members shall give the United Nations every assistance in any action it takes in accordance with the present Charter, and shall refrain from giving assistance to any state against which the United Nations is taking preventive or enforcement action.

6. The Organization shall ensure that states which are not Members of the United Nations act in accordance with these Principles so far as may be necessary for the maintenance of international peace and security.

7. Nothing contained in the present Charter shall authorize the United Nations to intervene in matters which are essentially within the domestic jurisdiction of any state or shall require the Members to submit such matters to settlement under the present Charter; but this principle shall not prejudice the application of enforcement measures under Chapter VII.

CHAPTER II

Membership

Article 3

The original Members of the United Nations shall be the states which, having participated in the United Nations Conference on International Organization at San Francisco, or having previously signed

the Declaration by United Nations of January 1, 1942, sign the present Charter and ratify it in accordance with Article 110.

Article 4

1. Membership in the United Nations is open to all other peace-loving states which accept the obligations contained in the present Charter and, in the judgment of the Organization, are able and willing to carry out these obligations.

2. The admission of any such state to membership in the United Nations will be effected by a decision of the General Assembly upon the recommendation of the Security Council.

Article 5

A Member of the United Nations against which preventive or enforcement action has been taken by the Security Council may be suspended from the exercise of the rights and privileges of membership by the General Assembly upon the recommendation of the Security Council. The exercise of these rights and privileges may be restored by the Security Council.

Article 6

A Member of the United Nations which has persistently violated the Principles contained in the present Charter may be expelled from the Organization by the General Assembly upon the recommendation of the Security Council.

CHAPTER III

Organs

Article 7

1. There are established as the principal organs of the United Nations; a General Assembly, a Security Council, an Economic and Social Council, a Trusteeship Council, an International Court of Justice, and a Secretariat.

2. Such subsidiary organs as may be found necessary may be established in accordance with the present Charter.

Article 8

The United Nations shall place no restrictions on the eligibility of men and women to participate in any capacity and under conditions of equality in its principal and subsidiary organs.

CHAPTER IV

The General Assembly Composition

Article 9

1. The General Assembly shall consist of all the members of the United Nations.

2. Each Member shall have not more than five representatives in the General Assembly.

Functions and Powers

Article 10

The General Assembly may discuss any questions or any matters within the scope of the present Charter or relating to the powers and functions of any organs provided for in the present Charter, and, except as provided in Article 12, may make recommendations to the Members of the United Nations or to the Security Council or to both on any such questions or matters.

Article 11

1. The General Assembly may consider the general principles of cooperation in the maintenance of international peace and security, including the principles governing disarmament and the regulation of armaments, and may make recommendations with regard to such principles to the Members or to the Security Council or to both.

2. The General Assembly may discuss any questions relating to the maintenance of international peace and security brought before it by any Member of the United Nations, or by the Security Council, or by a state which is not a Member of the United Nations, in accordance with Article 35, paragraph 2, and, except as provided in Article 12, may make recommendations with regard to any such question to the state or states concerned or to the Security Council or to both. Any such question on which action is necessary shall be referred to the Security Council by the General Assembly either before or after discussion.

3. The General Assembly may call the attention of the Security Council to situations which are likely to endanger international peace and security.

4. The powers of the General Assembly set forth in this Article shall not limit the general scope of Article 10.

Article 12

1. While the Security Council is exercising in respect of any dispute or situation the functions assigned to it in the present Charter, the General Assembly shall not make any recommendations with regard to that dispute or situation unless the Security Council so requests.

2. The Secretary-General, with the consent of the Security Council, shall notify the General Assembly at each session of any matters relative to the maintenance of international peace and security which are being dealt with by the Security Council and shall similarly notify the General Assembly, or the Members of the United Na-

tions if the General Assembly is not in session, immediately the Security Council ceases to deal with such matters.

Article 13

1. The General Assembly shall initiate studies and make recommendations for the purpose of:

(a) promoting international cooperation in the political field and encouraging the progressive development of international law and its codification;

(b) promoting international cooperation in the economic, social, cultural, educational, and health fields, and assisting in the realization of human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion.

2. The further responsibilities, functions and powers of the General Assembly with respect to matters mentioned in paragraph 1 (b) above are set forth in Chapters IX and X.

Article 14

Subject to the provisions of Article 12, the General Assembly may recommend measures for the peaceful adjustment of any situation, regardless of origin, which it deems likely to impair the general welfare or friendly relations among nations, including situations resulting from a violation of the provisions of the present Charter setting forth the Purposes and Principles of the United Nations.

Article 15

1. The General Assembly shall receive and consider annual and special reports from the Security Council; these reports shall include an account of the measures that the Security Council has decided upon or taken to maintain international peace and security.

2. The General Assembly shall receive and consider reports from the other organs of the United Nations.

Article 16

The General Assembly shall perform such functions with respect to the international trusteeship system as are assigned to it under Chapters XII and XIII, including the approval of the trusteeship agreements for areas not designated as strategic.

Article 17

1. The General Assembly shall consider and approve the budget of the Organization.

2. The expenses of the Organization shall be borne by the Members as apportioned by the General Assembly.

3. The General Assembly shall consider and approve any financial and budgetary arrangements with specialized agencies re-

ferred to in Article 57 and shall examine the administrative budgets of such specialized agencies with a view to making recommendations to the agencies concerned.

Voting

Article 18

1. Each member of the General Assembly shall have one vote.

2. Decisions of the General Assembly on important questions shall be made by a two-thirds majority of the members present and voting. These questions shall include: recommendations with respect to the maintenance of international peace and security, the election of the non-permanent members of the Security Council, the election of the members of the Economic and Social Council, the election of members of the Trusteeship Council in accordance with paragraph 1 (c) of Article 86, the admission of new Members to the United Nations, the suspension of the rights and privileges of membership, the expulsion of Members, questions relating to the operation of the trusteeship system, and budgetary questions.

3. Decisions on other questions, including the determination of additional categories of questions to be decided by a two-thirds majority, shall be made by a majority of the members present and voting.

Article 19

A Member of the United Nations which is in arrears in the payment of its financial contributions to the Organization shall have no vote in the General Assembly if the amount of its arrears equals or exceeds the amount of the contributions due from it for the preceding two full years. The General Assembly may, nevertheless, permit such a Member to vote if it is satisfied that the failure to pay is due to conditions beyond the control of the Member.

Procedure

Article 20

The General Assembly shall meet in regular annual sessions and in such special sessions as occasion may require. Special sessions shall be convoked by the Secretary-General at the request of the Security Council or of a majority of the Members of the United Nations.

Article 21

The General Assembly shall adopt its own rules of procedure. It shall elect its President for each session.

Article 22

The General Assembly may establish such subsidiary organs as it deems necessary for the performance of its functions.

CHAPTER V

The Security Council
Composition

Article 23

1. The Security Council shall consist of eleven Members of the United Nations. The Republic of China, France, the Union of Soviet Socialist Republics, the United Kingdom of Great Britain and Northern Ireland, and the United States of America shall be permanent members of the Security Council. The General Assembly shall elect six other Members of the United Nations to be non-permanent members of the Security Council, due regard being specially paid, in the first instance to the contribution of members of the United Nations to the maintenance of international peace and security and to the other purposes of the Organization, and also to equitable geographical distribution.

2. The non-permanent members of the Security Council shall be elected for a term of two years. In the first election of the non-permanent members, however, three shall be chosen for a term of one year. A retiring member shall not be eligible for immediate re-election.

3. Each member of the Security Council shall have one representative.

Functions and Powers

Article 24

1. In order to insure prompt and effective action by the United Nations, its Members confer on the Security Council primary responsibility for the maintenance of international peace and security, and agree that in carrying out its duties under this responsibility the Security Council acts on their behalf.

2. In discharging these duties the Security Council shall act in accordance with the Purposes and Principles of the United Nations. The specific powers granted to the Security Council for the discharge of these duties are laid down in Chapters VI, VII, VIII, and XII.

3. The Security Council shall submit annual and, when necessary, special reports to the General Assembly for its consideration.

Article 25

The Members of the United Nations agree to accept and carry out the decisions of the Security Council in accordance with the present Charter.

Article 26

In order to promote the establishment and maintenance of international peace and security with the least diversion for armaments of the world's human and eco-

nomic resources, the Security Council shall be responsible for formulating, with the assistance of the Military Staff Committee referred to in Article 47, plans to be submitted to the Members of the United Nations for the establishment of a system for the regulation of armaments.

Voting

Article 27

1. Each member of the Security Council shall have one vote.

2. Decisions of the Security Council on procedural matters shall be made by an affirmative vote of seven members.

3. Decisions of the Security Council on all other matters shall be made by an affirmative vote of seven members including the concurring votes of the permanent members; provided that, in decisions under Chapter VI, and under paragraph 3 of Article 52, a party to a dispute shall abstain from voting.

Procedure

Article 28

1. The Security Council shall be so organized as to be able to function continuously. Each member of the Security Council shall for this purpose be represented at all times at the seat of the Organization.

2. The Security Council shall hold periodic meetings at which each of its members may, if it so desires, be represented by a member of the government or by some other specially designated representative.

3. The Security Council may hold meetings at such places other than the seat of the Organization as in its judgment will best facilitate its work.

Article 29

The Security Council may establish such subsidiary organs as it deems necessary for the performance of its functions.

Article 30

The Security Council shall adopt its own rules of procedure, including the method of selecting its President.

Article 31

Any Member of the United Nations which is not a member of the Security Council may participate, without vote, in the discussion of any question brought before the Security Council whenever the latter considers that the interests of that Member are specially affected.

Article 32

Any Member of the United Nations which is not a member of the Security

Council or any state which is not a Member of the United Nations, if it is a party to a dispute under consideration by the Security Council, shall be invited to participate, without vote, in the discussion relating to the dispute. The Security Council shall lay down such conditions as it deems just for the participation of a state which is not a Member of the United Nations.

CHAPTER VI

Pacific Settlement of Disputes

Article 33

1. The parties to any dispute, the continuance of which is likely to endanger the maintenance of international peace and security, shall, first of all, seek a solution by negotiation, enquiry, mediation, conciliation, arbitration, judicial settlement, resort to regional agencies or arrangements, or other peaceful means of their own choice.

2. The Security Council shall, when it deems necessary, call upon the parties to settle their dispute by such means.

Article 34

The Security Council may investigate any dispute, or any situation which might lead to international friction or give rise to a dispute, in order to determine whether the continuance of the dispute or situation is likely to endanger the maintenance of international peace and security.

Article 35

1. Any Member of the United Nations may bring any dispute, or any situation of the nature referred to in Article 34 to the attention of the Security Council or of the General Assembly.

2. A state which is not a Member of the United Nations may bring to the attention of the Security Council or of the General Assembly any dispute to which it is a party if it accepts in advance, for the purposes of the dispute, the obligations of pacific settlement provided in the present Charter.

3. The proceedings of the General Assembly in respect of matters brought to its attention under this Article will be subject to the provisions of Articles 11 and 12.

Article 36

1. The Security Council may, at any stage of a dispute of the nature referred to in Article 33 or of a situation of like nature, recommend appropriate procedures or methods of adjustment.

2. The Security Council should take into consideration any procedures for the settlement of the dispute which have already been adopted by the parties.

3. In making recommendations under this Article the Security Council should also take into consideration that legal disputes should as a general rule be referred by the parties to the International Court of Justice in accordance with the provisions of the Statute of the Court.

Article 37

1. Should the parties to a dispute of the nature referred to in Article 33 fail to settle it by the means indicated in that Article, they shall refer it to the Security Council.

2. If the Security Council deems that the continuance of the dispute is in fact likely to endanger the maintenance of international peace and security, it shall decide whether to take action under Article 36 or to recommend such terms of settlement as it may consider appropriate.

Article 38

Without prejudice to the provisions of Articles 33 to 37, the Security Council may, if all the parties to any dispute so request, make recommendations to the parties with a view to a pacific settlement of the dispute.

CHAPTER VII

Action with Respect to Threats to the Peace, Breaches of the Peace, and Acts of Aggression

Article 39

The Security Council shall determine the existence of any threat to the peace, breach of the peace, or act of aggression and shall make recommendations, or decide what measures shall be taken in accordance with Articles 41 and 42, to maintain or restore international peace and security.

Article 40

In order to prevent an aggravation of the situation, the Security Council may, before making the recommendations or deciding upon the measures provided for in Article 39, call upon the parties concerned to comply with such provisional measures as it deems necessary or desirable. Such provisional measures shall be without prejudice to the rights, claims, or position of the parties concerned. The Security Council shall duly take account of failure to comply with such provisional measures.

Article 41

The Security Council may decide what measures not involving the use of armed force are to be employed to give effect.

to its decisions, and it may call upon the Members of the United Nations to apply such measures. These may include complete or partial interruption of economic relations and of rail, sea, air, postal, telegraphic, radio, and other means of communication, and the severance of diplomatic relations.

Article 42

Should the Security Council consider that measures provided for in Article 41 would be inadequate or have proved to be inadequate, it may take such action by air, sea, or land forces as may be necessary to maintain or restore international peace and security. Such action may include demonstrations, blockade, and other operations by air, sea, or land forces of Members of the United Nations.

Article 43

1. All Members of the United Nations, in order to contribute to the maintenance of international peace and security, undertake to make available to the Security Council, on its call and in accordance with a special agreement or agreements, armed forces, assistance, and facilities, including rights of passage, necessary for the purpose of maintaining international peace and security.

2. Such agreement or agreements shall govern the numbers and types of forces, their degree of readiness and general location, and the nature of the facilities and assistance to be provided.

3. The agreement or agreements shall be negotiated as soon as possible on the initiative of the Security Council. They shall be concluded between the Security Council and Members or between the Security Council and groups of Members and shall be subject to ratification by the signatory states in accordance with their respective constitutional processes.

Article 44

When the Security Council has decided to use force it shall, before calling upon a Member not represented on it to provide armed forces in fulfillment of the obligations assumed under Article 43, invite that Member, if the Member so desires, to participate in the decisions of the Security Council concerning the employment of contingents of that Member's armed forces.

Article 45

In order to enable the United Nations to take urgent military measures, Members shall hold immediately available national air-force contingents for combined international enforcement action. The strength and degree of readiness of these contingents and plans for their combined action shall be determined, within the limits laid

down in the special agreement or agreements referred to in Article 43, by the Security Council with the assistance of the Military Staff Committee.

Article 46

Plans for the application of armed force shall be made by the Security Council with the assistance of the Military Staff Committee.

Article 47

1. There shall be established a Military Staff Committee to advise and assist the Security Council on all questions relating to the Security Council's military requirements for the maintenance of international peace and security, the employment and command of forces placed at its disposal, the regulation of armaments, and possible disarmament.

2. The Military Staff Committee shall consist of the Chiefs of Staff of the permanent members of the Security Council or their representatives. Any Member of the United Nations not permanently represented on the Committee shall be invited by the Committee to be associated with it when the efficient discharge of the Committee's responsibilities requires the participation of that Member in its work.

3. The Military Staff Committee shall be responsible under the Security Council for the strategic direction of any armed forces placed at the disposal of the Security Council. Questions relating to the command of such forces shall be worked out subsequently.

4. The Military Staff Committee, with the authorization of the Security Council and after consultation with appropriate regional agencies, may establish regional subcommittees.

Article 48

1. The action required to carry out the decisions of the Security Council for the maintenance of international peace and security shall be taken by all the Members of the United Nations or by some of them, as the Security Council may determine.

2. Such decisions shall be carried out by the Members of the United Nations directly and through their action in the appropriate international agencies of which they are members.

Article 49

The Members of the United Nations shall join in affording mutual assistance in carrying out the measures decided upon by the Security Council.

Article 50

If preventive or enforcement measures against any state are taken by the Security Council, any other state, whether a

Member of the United Nations or not, which finds itself confronted with special economic problems arising from the carrying out of those measures shall have the right to consult the Security Council with regard to a solution of those problems.

Article 51

Nothing in the present Charter shall impair the inherent right of individual or collective self-defense if an armed attack occurs against a Member of the United Nations, until the Security Council has taken measures necessary to maintain international peace and security. Measures taken by Members in the exercise of this right of self-defense shall be immediately reported to the Security Council and shall not in any way affect the authority and responsibility of the Security Council under the present Charter to take at any time such action as it deems necessary in order to maintain or restore international peace and security.

CHAPTER VIII

Regional Arrangements

Article 52

1. Nothing in the present Charter precludes the existence of regional arrangements or agencies for dealing with such matters relating to the maintenance of international peace and security as are appropriate for regional action, provided that such arrangements or agencies and their activities are consistent with the Purposes and Principles of the United Nations.

2. The Members of the United Nations entering into such arrangements or constituting such agencies shall make every effort to achieve pacific settlement of local disputes through such regional arrangements or by such regional agencies before referring them to the Security Council.

3. The Security Council shall encourage the development of pacific settlement of local disputes through such regional arrangements or by such regional agencies either on the initiative of the states concerned or by reference from the Security Council.

4. This Article in no way impairs the application of Articles 34 and 35.

Article 53

1. The Security Council shall, where appropriate, utilize such regional arrangements or agencies for enforcement action under its authority. But no enforcement action shall be taken under regional arrangements or by regional agencies without the authorization of the Security Council, with the exception of measures against any enemy state, as defined in para-

graph 2 of this Article, provided for pursuant to Article 107 or in regional arrangements directed against renewal of aggressive policy on the part of any such state, until such time as the Organization may, on request of the Governments concerned, be charged with the responsibility for preventing further aggression by such a state.

2. The term enemy state as used in paragraph 1 of this Article applies to any state which during the Second World War has been an enemy of any signatory of the present Charter.

Article 54

The Security Council shall at all times be kept fully informed of activities undertaken or in contemplation under regional arrangements or by regional agencies for the maintenance of international peace and security.

CHAPTER IX

International Economic and Social Cooperation

Article 55

With a view to the creation of conditions of stability and well-being which are necessary for peaceful and friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples, the United Nations shall promote:

(a) higher standards of living, full employment, and conditions of economic and social progress and development;

(b) solutions of international economic, social, health, and related problems; and international cultural and educational cooperation; and

(c) universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion.

Article 56

All Members pledge themselves to take joint and separate action in cooperation with the Organization for the achievement of the purposes set forth in Article 55.

Article 57

1. The various specialized agencies, established by intergovernmental agreement and having wide international responsibilities, as defined in their basic instruments, in economic, social, cultural, educational, health, and related fields, shall be brought into relationship with the United Nations in accordance with the provisions of Article 63.

2. Such agencies thus brought into relationship with the United Nations are

hereinafter referred to as specialized agencies.

Article 58

The Organization shall make recommendations for the coordination of the policies and activities of the specialized agencies.

Article 59

The Organization shall, where appropriate, initiate negotiations among the states concerned for the creation of any new specialized agencies required for the accomplishment of the purposes set forth in Article 55.

Article 60

Responsibility for the discharge of the functions of the Organization set forth in this Chapter shall be vested in the General Assembly and, under the authority of the General Assembly, in the Economic and Social Council, which shall have for this purpose the powers set forth in Chapter X.

CHAPTER X

Economic and Social Council

Composition

Article 61

1. The Economic and Social Council shall consist of eighteen Members of the United Nations elected by the General Assembly.

2. Subject to the provisions of paragraph 3, six members of the Economic and Social Council shall be elected each year for a term of three years. A retiring member shall be eligible for immediate re-election.

3. At the first election, eighteen members of the Economic and Social Council shall be chosen. The term of office of six members so chosen shall expire at the end of one year, and of six other members at the end of two years, in accordance with arrangements made by the General Assembly.

4. Each member of the Economic and Social Council shall have one representative.

Functions and Powers

Article 62

1. The Economic and Social Council may make or initiate studies and reports with respect to international economic, social, cultural, educational, health, and related matters and may make recommendations with respect to any such matters to the General Assembly, to the Members of the United Nations, and to the specialized agencies concerned.

2. It may make recommendations for the purpose of promoting respect for, and observance of, human rights and fundamental freedoms for all.

3. It may prepare draft conventions for submission to the General Assembly, with respect to matters falling within its competence.

4. It may call, in accordance with the rules prescribed by the United Nations international conferences on matters falling within its competence.

Article 63

1. The Economic and Social Council may enter into agreements with any of the agencies referred to in Article 57, defining the terms on which the agency concerned shall be brought into relationship with the United Nations. Such agreements shall be subject to approval by the General Assembly.

2. It may coordinate the activities of the specialized agencies through consultation with and recommendations to such agencies and through recommendations to the General Assembly and to the Members of the United Nations.

Article 64

1. The Economic and Social Council may take appropriate steps to obtain regular reports from the specialized agencies. It may make arrangements with the Members of the United Nations and with the specialized agencies to obtain reports on the steps taken to give effect to its own recommendations and to recommendations on matters falling within its competence made by the General Assembly.

2. It may communicate its observations on these reports to the General Assembly.

Article 65

The Economic and Social Council may furnish information to the Security Council and shall assist the Security Council upon its request.

Article 66

1. The Economic and Social Council shall perform such functions as fall within its competence in connection with the carrying out of the recommendations of the General Assembly.

2. It may, with the approval of the General Assembly, perform services at the request of Members of the United Nations and at the request of specialized agencies.

3. It shall perform such other functions as are specified elsewhere in the present Charter or as may be assigned to it by the General Assembly.

Voting

Article 67

1. Each member of the Economic and Social Council shall have one vote.

2. Decisions of the Economic and Social Council shall be made by a majority of the members present and voting.

Procedure

Article 68

The Economic and Social Council shall set up commissions in economic and social fields and for the promotion of human rights, and such other commissions as may be required for the performance of its functions.

Article 69

The Economic and Social Council shall invite any Member of the United Nations to participate, without vote, in its deliberations on any matter of particular concern to that Member.

Article 70

The Economic and Social Council may make arrangements for representatives of the specialized agencies to participate, without vote, in its deliberations and in those of the commissions established by it, and for its representatives to participate in the deliberations of the specialized agencies.

Article 71

The Economic and Social Council may make suitable arrangements for consultation with non-governmental organizations which are concerned with matters within its competence. Such arrangements may be made with international organizations and, where appropriate, with national organizations after consultation with the Member of the United Nations concerned.

Article 72

1. The Economic and Social Council shall adopt its own rules of procedure, including the method of selecting its President.

2. The Economic and Social Council shall meet as required in accordance with its rules, which shall include provision for the convening of meetings on the request of a majority of its members.

CHAPTER XI

Declaration Regarding Non-Self-Governing Territories

Article 73

Members of the United Nations which have or assume responsibilities for the administration of territories whose peoples have not yet attained a full measure of self-government recognize the principle that the interests of the inhabitants of these territories are paramount, and ac-

cept as a sacred trust the obligation to promote to the utmost, within the system of international peace and security established by the present Charter, the well-being of the inhabitants of these territories, and, to this end:

(a) to ensure, with due respect for the culture of the peoples concerned, their political, economic, social, and educational advancement, their just treatment, and their protection against abuses;

(b) to develop self-government, to take due account of the political aspirations of the peoples, and to assist them in the progressive development of their free political institutions, according to the particular circumstances of each territory and its peoples and their varying stages of advancement;

(c) to further international peace and security;

(d) to promote constructive measures of development, to encourage research, and to cooperate with one another and, when and where appropriate, with specialized international bodies with a view to the practical achievement of the social, economic and scientific purposes set forth in this Article; and

(e) to transmit regularly to the Secretary-General for information purposes, subject to such limitation as security and constitutional considerations may require, statistical and other information of a technical nature relating to economic, social, and educational conditions in the territories for which they are respectively responsible other than those territories to which Chapters XII and XIII apply.

Article 74

Members of the United Nations also agree that their policy in respect of the territories to which this Chapter applies, no less than in respect of their metropolitan areas, must be based on the general principle of good-neighborliness, due account being taken of the interests and well-being of the rest of the world, in social, economic, and commercial matters.

CHAPTER XII

International Trusteeship System

Article 75

The United Nations shall establish under its authority an international trusteeship system for the administration and supervision of such territories as may be placed thereunder by subsequent individual agreements. These territories are hereinafter referred to as trust territories.

Article 76

The basic objectives of the trusteeship system, in accordance with the Purposes

of the United Nations laid down in Article 1 of the present Charter, shall be:

(a) to further international peace and security;

(b) to promote the political, economic, social, and educational advancement of the inhabitants of the trust territories, and their progressive development towards self-government or independence as may be appropriate to the particular circumstances of each territory and its peoples and the freely expressed wishes of the peoples concerned, and as may be provided by the terms of each trusteeship agreement;

(c) to encourage respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion, and to encourage recognition of the interdependence of the peoples of the world; and

(d) to ensure equal treatment in social, economic, and commercial matters for all Members of the United Nations and their nationals, and also equal treatment for the latter in the administration of justice, without prejudice to the attainment of the foregoing objectives and subject to the provisions of Article 80.

Article 77

1. The trusteeship system shall apply to such territories in the following categories as may be placed thereunder by means of trusteeship agreements:

(a) territories now held under mandate;

(b) territories which may be detached from enemy states as a result of the Second World War; and

(c) territories voluntarily placed under the system by states responsible for their administration.

2. It will be a matter for subsequent agreement as to which territories in the foregoing categories will be brought under the trusteeship system and upon what terms.

Article 78

The trusteeship system shall not apply to territories which have become Members of the United Nations, relationship among which shall be based on respect for the principle of sovereign equality.

Article 79

The terms of trusteeship for each territory to be placed under the trusteeship system, including any alteration or amendment, shall be agreed upon by the states directly concerned, including the mandatory power in the case of territories held under mandate by a Member of the United Nations, and shall be approved as provided for in Articles 83 and 85.

Article 80

1. Except as may be agreed upon in individual trusteeship agreements, made under Articles 77, 79, and 81, placing each territory under the trusteeship system, and until such agreements have been concluded, nothing in this Chapter shall be construed in or of itself to alter in any manner the rights whatsoever of any states or any peoples or the terms of existing international instruments to which Members of the United Nations may respectively be parties.

2. Paragraph 1 of this Article shall not be interpreted as giving grounds for delay or postponement of the negotiation and conclusion of agreements for placing mandated and other territories under the trusteeship system as provided for in Article 77.

Article 81

The trusteeship agreement shall in each case include the terms under which the trust territory will be administered and designate the authority which will exercise the administration of the trust territory. Such authority, hereinafter called the administering authority, may be one or more states or the Organization itself.

Article 82

There may be designated, in any trusteeship agreement, a strategic area or areas which may include part or all of the trust territory to which the agreement applies, without prejudice to any special agreement or agreements made under Article 43.

Article 83

1. All functions of the United Nations relating to strategic areas, including the approval of the terms of the trusteeship agreements and of their alteration or amendment, shall be exercised by the Security Council.

2. The basic objectives set forth in Article 76 shall be applicable to the people of each strategic area.

3. The Security Council shall, subject to the provisions of the trusteeship agreements and without prejudice to security considerations, avail itself of the assistance of the Trusteeship Council to perform those functions of the United Nations under the trusteeship system relating to political, economic, social, and educational matters in the strategic areas.

Article 84

It shall be the duty of the administering authority to ensure that the trust territory shall play its part in the maintenance of international peace and security. To this end the administering authority may make use of volunteer forces, facili-

ties, and assistance from the trust territory in carrying out the obligations towards the Security Council undertaken in this regard by the administering authority, as well as for local defense and the maintenance of law and order within the trust territory.

Article 85

1. The functions of the United Nations with regard to trusteeship agreements for all areas not designated as strategic, including the approval of the terms of the trusteeship agreements and of their alteration or amendment, shall be exercised by the General Assembly.

2. The Trusteeship Council, operating under the authority of the General Assembly, shall assist the General Assembly in carrying out these functions.

CHAPTER XIII

The Trusteeship Council Composition

Article 86

1. The Trusteeship Council shall consist of the following Members of the United Nations:

(a) those Members administering trust territories;

(b) such of those Members mentioned by name in Article 23 as are not administering trust territories; and

(c) as many other Members elected for three-year terms by the General Assembly as may be necessary to ensure that the total number of members of the Trusteeship Council is equally divided between those Members of the United Nations which administer trust territories and those which do not.

2. Each member of the Trusteeship Council shall designate one specially qualified person to represent it therein.

Functions and Powers

Article 87

The General Assembly and, under its authority, the Trusteeship Council, in carrying out their functions, may:

(a) consider reports submitted by the administering authority;

(b) accept petitions and examine them in consultation with the administering authority;

(c) provide for periodic visits to the respective trust territories at times agreed upon with the administering authority; and

(d) take these and other actions in conformity with the terms of the trusteeship agreements.

Article 88

The Trusteeship Council shall formulate a questionnaire on the political, economic, social, and educational advancement of the inhabitants of each trust territory, and the administering authority for each trust territory within the competence of the General Assembly shall make an annual report to the General Assembly upon the basis of such questionnaire.

Voting

Article 89

1. Each member of the Trusteeship Council shall have one vote.

2. Decisions of the Trusteeship Council shall be made by a majority of the members present and voting.

Procedure

Article 90

1. The Trusteeship Council shall adopt its own rules of procedure, including the method of selecting its President.

2. The Trusteeship Council shall meet as required in accordance with its rules, which shall include provision for the convening of meetings on the request of a majority of its members.

Article 91

The Trusteeship Council shall, when appropriate, avail itself of the assistance of the Economic and Social Council and of the specialized agencies in regard to matters with which they are respectively concerned.

CHAPTER XIV

The International Court of Justice

Article 92

The International Court of Justice shall be the principal judicial organ of the United Nations. It shall function in accordance with the annexed Statute, which is based upon the Statute of the Permanent Court of International Justice and forms an integral part of the present Charter.

Article 93

1. All Members of the United Nations are *ipso facto* parties to the Statute of the International Court of Justice.

2. A state which is not a Member of the United Nations may become a party to the Statute of the International Court of Justice on condition to be determined in each case by the General Assembly upon the recommendation of the Security Council.

Article 94

1. Each Member of the United Nations undertakes to comply with the decision of

the International Court of Justice in any case to which it is a party.

2. If any party to a case fails to perform the obligations incumbent upon it under a judgment rendered by the Court, the other party may have recourse to the Security Council, which may, if it deems necessary, make recommendations or decide upon measures to be taken to give effect to the judgment.

Article 95

Nothing in the present Charter shall prevent Members of the United Nations from entrusting the solution of their differences to other tribunals by virtue of agreements already in existence or which may be concluded in the future.

Article 96

1. The General Assembly or the Security Council may request the International Court of Justice to give an advisory opinion on any legal question.

2. Other organs of the United Nations and specialized agencies, which may at any time be so authorized by the General Assembly, may also request advisory opinions of the Court on legal questions arising within the scope of their activities.

CHAPTER XV

The Secretariat

Article 97

The Secretariat shall comprise a Secretary-General and such staff as the Organization may require. The Secretary-General shall be appointed by the General Assembly upon the recommendation of the Security Council. He shall be the chief administrative officer of the Organization.

Article 98

The Secretary-General shall act in that capacity in all meetings of the General Assembly, of the Security Council, of the Economic and Social Council, and of the Trusteeship Council, and shall perform such other functions as are entrusted to him by these organs. The Secretary-General shall make an annual report to the General Assembly on the work of the Organization.

Article 99

The Secretary-General may bring to the attention of the Security Council any matter which in his opinion may threaten the maintenance of international peace and security.

Article 100

1. In the performance of their duties the Secretary-General and the staff shall not seek or receive instructions from any government or from any other authority external to the Organization. They shall

refrain from any action which might reflect on their position as international officials responsible only to the Organization.

2. Each Member of the United Nations undertakes to respect the exclusively international character of the responsibilities of the Secretary-General and the staff and not to seek to influence them in the discharge of their responsibilities.

Article 101

1. The staff shall be appointed by the Secretary-General under regulations established by the General Assembly.

2. Appropriate staffs shall be permanently assigned to the Economic and Social Council, the Trusteeship Council, and, as required, to other organs of the United Nations. These staffs shall form a part of the Secretariat.

3. The paramount consideration in the employment of the staff and in the determination of the conditions of service shall be the necessity of securing the highest standards of efficiency, competence, and integrity. Due regard shall be paid to the importance of recruiting the staff on as wide a geographical basis as possible.

CHAPTER XVI

Miscellaneous Provisions

Article 102

1. Every treaty and every international agreement entered into by any Member of the United Nations after the present Charter comes into force shall as soon as possible be registered with the Secretariat and published by it.

2. No party to any such treaty or international agreement which has not been registered in accordance with the provisions of paragraph 1 of this Article may invoke that treaty or agreement before any organ of the United Nations.

Article 103

In the event of a conflict between the obligations of the Members of the United Nations under the present Charter and their obligations under any other international agreement, their obligations under the present Charter shall prevail.

Article 104

The Organization shall enjoy in the territory of each of its Members such legal capacity as may be necessary for the exercise of its functions and the fulfillment of its purposes.

Article 105

1. The Organization shall enjoy in the territory of each of its Members such privileges and immunities as are necessary for the fulfillment of its purposes.

2. Representatives of the Members of the United Nations and officials of the Organization shall similarly enjoy such privileges and immunities as are necessary for the independent exercise of their functions in connection with the Organization.

3. The General Assembly may make recommendations with a view to determining the details of the application of paragraphs 1 and 2 of this Article or may propose conventions to the Members of the United Nations for this purpose.

CHAPTER XVII

Transitional Security Arrangements

Article 106

Pending the coming into force of such special agreements referred to in Article 43 as in the opinion of the Security Council enable it to begin the exercise of its responsibilities under Article 42, the parties to the Four-Nation Declaration, signed at Moscow, October 30, 1943, and France, shall, in accordance with the provisions of paragraph 5 of that Declaration, consult with one another and, as occasion requires with other Members of the United Nations with a view to such joint action on behalf of the Organization as may be necessary for the purpose of maintaining international peace and security.

Article 107

Nothing in the present Charter shall invalidate or preclude action, in relation to any state which during the Second World War has been an enemy of any signatory to the present Charter, taken or authorized as a result of that war by the Governments having responsibility for such action.

CHAPTER XVIII

Amendments

Article 108

Amendments to the present Charter shall come into force for all Members of the United Nations when they have been adopted by a vote of two-thirds of the members of the General Assembly and ratified in accordance with their respective constitutional processes by two-thirds of the Members of the United Nations, including all the permanent members of the Security Council.

Article 109

1. A General Conference of the Members of the United Nations for the purpose of reviewing the present Charter may be held at a date and place to be fixed by a two-thirds vote of the members of the General Assembly and by a vote of any seven members of the Security Council. Each Member of the United Nations shall have one vote in the conference.

2. Any alteration of the present Charter recommended by a two-thirds vote of the conference shall take effect when ratified in accordance with their respective constitutional processes by two-thirds of the Members of the United Nations including all the permanent members of the Security Council.

3. If such a conference has not been held before the tenth annual session of the General Assembly following the coming into force of the present Charter, the proposal to call such a conference shall be placed on the agenda of that session of the General Assembly, and the conference shall be held if so decided by a majority vote of the members of the General Assembly and by a vote of any seven members of the Security Council.

CHAPTER XIX

Ratification and Signature

Article 110

1. The present Charter shall be ratified by the signatory states in accordance with their respective constitutional processes.

2. The ratifications shall be deposited with the Government of the United States of America, which shall notify all the signatory states of each deposit as well as the Secretary-General of the Organization when he has been appointed.

3. The present Charter shall come into force upon the deposit of ratifications by the Republic of China, France, the Union of Soviet Socialist Republics, the United Kingdom of Great Britain and Northern Ireland, and the United States of America, and by a majority of the other signatory states. A protocol of the ratifications deposited shall thereupon be drawn up by the Government of the United States of America which shall communicate copies thereof to all the signatory states.

4. The states signatory to the present Charter which ratify it after it has come into force will become original Members of the United Nations on the date of the deposit of their respective ratifications.

Article 111

The present Charter, of which the Chinese, French, Russian, English, and Spanish texts are equally authentic, shall remain deposited in the archives of the Government of the United States of America. Duly certified copies thereof shall be transmitted by that Government to the Governments of the other signatory states.

IN FAITH WHEREOF the representatives of the Governments of the United Nations have signed the present Charter.

DONE at the city of San Francisco the twenty-sixth day of June, one thousand nine hundred and forty-five.

For 1957 sports champions and records,
see special section beginning on Page 903.

BASEBALL

THE POPULAR TRADITION that baseball was invented by Abner Doubleday at Cooperstown, N. Y., in 1839, has been enshrined in the Hall of Fame and National Museum of Baseball erected in that town, but research has proved that a game called "Base Ball" was played in this country and England before 1839. However, the first team baseball as we know it was played at the Elysian Fields, Hoboken, N. J., on June 19, 1846, between the Knickerbockers and the New York Nine. There was a gradual growth of baseball and an improvement of equipment and playing skill in the next fifty years. Soldiers returning home from the Civil War spread over the country the game they had learned to play in camp.

Historians have it that the first pitcher to throw a curve was William A. (Candy) Cummings in 1867. The Cincinnati Red Stockings were the first all-professional team and in 1869 they played 64 games without a loss. The standard ball of the

same size and weight, still the rule, was adopted in 1872. The first catcher's mask was worn in 1875. The National League was organized in 1876. The first chest protector was donned in 1885. The three-strike rule was put on the books in 1887 and the four-ball ticket to first base came in 1889. The pitching distance, formerly shorter, was lengthened to 60 feet 6 inches in 1893 and the rules have been only slightly modified since that time.

The American League, under the vigorous leadership of B. B. Johnson, blossomed forth as a major league in 1901. Judge Kenesaw Mountain Landis, by action of the two major leagues, became Commissioner of Baseball in 1921 and, upon his death (1944), Albert B. Chandler, former United States Senator from Kentucky, was elected to that office (1945). Chandler failed to obtain a new contract, and he was succeeded by Ford C. Frick (1951), the National League president.

Indians-Yanks Hold Crowd Mark

An all-time regular-season baseball attendance record was set when 84,587 fans paid to see the Indians take a doubleheader from the New York Yankees, 4-1, 3-2, at Cleveland's Municipal Stadium on Sept. 12,

1954. The 1,976 non-paying spectators increased the figures to 86,563. The fifth game of the 1948 world series, also held in Cleveland, attracted a paid crowd of 86,288, the all-time high in the sport.

The First World Series No-Hitter

Don Larsen of the New York Yankees pitched the first no-run no-hit game in World Series history in 1956 and hurled a perfect game in so doing. Facing the Brooklyn Dodgers at the Yankee Stadium

in the fifth game of the series on Oct. 8, Larsen retired 27 batters in a row. The righthander made only 97 pitches. The Yankees won, 2 to 0. The attendance was 64,519. The box score:

GOLF

IT MAY BE that golf originated in Holland—historians believe it did—but certainly Scotland fostered the game and is famous for it. In fact, in 1457 the Scottish Parliament, disturbed because football and golf had lured young Scots from the more soldierly exercise of archery, passed an ordinance that “futeball and golf be utterly cryit down and nocht usit”. James I and Charles I of the royal line of Stuarts were golf enthusiasts, whereby the game came to be known as “the royal and ancient game of golf”.

The golf balls used in the early games were leather covered and stuffed with feathers. Clubs of all kinds were fashioned by hand to suit individual players. The great step in spreading the game came with the change from the feather ball to the gutta-percha ball about 1850, and in 1860 formal competition began with the establishment of an annual tournament for the British open championship. There are records of “golf clubs” in the United

States as far back as colonial days but no proof of actual play before John Reid and some friends laid out six holes on the Reid lawn in Yonkers, N. Y., in 1888 and played there with the golf balls and clubs brought over from Scotland by Robert Lockhart. This group then formed the St. Andrews Golf Club of Yonkers, and golf was established in this country.

However, it remained a rather sedate and almost aristocratic pastime until a 20-year-old ex-caddy, Francis Ouimet of Boston, defeated two great British professionals, Harry Vardon and Ted Ray, in the United States Open championship at Brookline, Mass., in 1913. This feat put the game and Francis Ouimet on the front pages of the newspapers and stirred a wave of enthusiasm for the sport. The greatest feat so far in golf history was that of Robert Tyre Jones, Jr. of Atlanta, Ga., in winning the British Open, the British Amateur, the U. S. Open and the U. S. Amateur titles in one year, 1930.

LAWN TENNIS

LAWN TENNIS is a comparatively modern modification of the ancient game of court tennis. Major Walter Clopton Wingfield thought that something like court tennis might be played outdoors on lawns and in December, 1873, at Nantclwyd, Wales, he introduced his new game under the name of *Sphairistike* at a lawn party. The game was a success and spread rapidly, but the name was a total failure and almost immediately disappeared when all the players and spectators began to refer to the new game as "lawn tennis." In the early part of 1874 a young lady named Mary Ewing Outerbridge returned from Bermuda to New York, bringing with her the implements and necessary equipment of the new game that she had obtained from a British Army supply store in Bermuda. Miss Outerbridge and friends played the first game of lawn tennis in the United States on the grounds of the Staten Island

Cricket and Baseball Club in the spring of 1874.

For a few years the new game went along in haphazard fashion under varying rules. Tennis balls were of no standard size or texture. The nets were set at different heights up to 5 feet on the side and 4 feet in the middle. Some courts were marked out in hour-glass shape, narrow in the middle and wide at both ends. But about 1880 standard measurements for the court and standard equipment within definite limits became the rule. In 1881 the United States Lawn Tennis Association was formed and conducted the first national championship at Newport, R. I. The international matches for the Davis Cup began with a series between the British and United States players on the courts of the Longwood Cricket Club, Chestnut Hill, Mass., in 1900, with the home players winning.

 1955—Angela Mortimer-Ann Shilcock
 1956—Althea Gibson-Angela Buxton

FOOTBALL

THE PASTIME of kicking a ball around goes back beyond the limits of recorded history. Ancient savage tribes played football of a primitive kind. There was a ball-kicking game played by Athenians and Spartans and Corinthians 2500 years ago and the Greeks had a name for it: *Episkuros*. The Romans had a somewhat similar game called *Harpastum* and are supposed to have carried the game with them when they invaded the British Isles in the First Century, B.C.

Undoubtedly the game known in the United States as Football traces directly to the English game of Rugby, though the modifications have been many and rather sweeping in some directions. There was informal football on our college lawns well over a century ago and an annual Freshman-Sophomore series of "scrimmages" began at Yale in 1840. But the first formal intercollegiate football game in this country was the Princeton-Rutgers contest played at New Brunswick, N. J., on Nov. 6, 1869, with Rutgers winning by 6 goals to 4. Columbia took to the intercollegiate football field in 1870 and Yale in 1872. Soon many colleges were playing football in the autumn.

In those old days games were played with twenty-five, twenty, fifteen or eleven

men on a side by mutual agreement. In 1880 there was a football convention at which Walter Camp of Yale persuaded the delegates to agree to a rule calling for eleven players on a side. In 1882 there was adopted the rule requiring the offensive team to make 5 yards in three downs or surrender the ball to its opponents. The game grew so rough that it was attacked as brutal by many critics and some colleges abandoned the sport. Conditions were so bad in 1906 that President Theodore Roosevelt, an enthusiast for all sports, called a meeting of Yale, Harvard and Princeton representatives at the White House in the hope of reforming and improving the game. The outcome was that the game, with the forward pass introduced and some other modifications of the rules inserted, became faster and cleaner and gradually grew to the tremendous popularity it enjoys today.

Professional football, now firmly established, is an outgrowth of intercollegiate football. The first professional game was played in 1895 at Latrobe, Pa. The National Football League was founded in 1921. The All-America Conference went into action in 1946. At the end of the 1949 season the two major play-for-pay circuits merged, retaining the name of the older league.

Giants Win All-Star Game

The New York Giants, 1956 pro champions, defeated the collegians, 22-13, in the 1957 renewal of the annual All-Star game in Chicago. While a crowd of 75,000 looked on in rain, Charley Conerly passed to Ken McAfee for two Giant touchdowns, while their teammate, Ben Agajanian kicked two field goals and two extra points. It was the 15th defeat of the series for the College All-Stars. They have won seven, while two other games ended in ties.

THE first Olympic Games of which there is record occurred in 776 B.C. and consisted of one event, a great foot race of about 200 yards held on a plain by the River Alpheus (now the Ruphia) just outside the little town of Olympia in Greece. It was from that date that the Greeks began to keep their calendar by "Olympiads," the four-year spans between the celebrations of the famous games. There was a religious as well as an athletic significance to the ancient games and the shrines, temples and sacred fires within the Olympic enclosure were the scenes of worship all through the year whereas the Olympic Games, at the height of their popularity, never lasted more than five days and were held only once every four years.

The competition was entirely amateur at the start and the only prizes were laurel wreaths. Only free Greek citizens were allowed to compete and they had to undergo a strict training course that lasted ten months. But civic rivalry led to trickery and professionalism and the

games became degraded after some centuries. When Rome conquered Greece, the Roman emperors turned the Olympic Games from patriotic, religious and athletic festivals into carnivals and circuses. They dragged on malodorously until they were finally halted by decree of Emperor Theodosius I of Rome in A.D. 394.

The modern Olympic Games, which started in Athens in 1896, are the result of the devotion of a French educator, Baron Pierre de Coubertin, to the idea that, since boys and athletics have gone together down the ages, education and athletics might well go hand-in-hand toward a better international understanding. He planned a revival of the ancient Olympic Games on a world-wide basis and succeeded in getting nine nations to send athletes to the first of the modern games in 1896. Since then more than 35,000 athletes representing about 60 nations have competed in the games.

Interrupted for the second time by war, the modern Olympic Games were resumed at London in 1948.

OLYMPIC GAMES CHAMPIONS, 1896-1956

TRACK AND FIELD—MEN

60-Meter Run

1900	A. E. Kraenzlein, United States.....	7s.
1904	Archie Hahn, United States.....	7s.

100-Meter Run

1896	T. E. Burke, United States.....	12s.
1900	F. W. Jarvis, United States.....	10.8s.
1904	Archie Hahn, United States.....	11s.
1906	Archie Hahn, United States.....	11.2s.
1908	R. E. Walker, South Africa.....	10.8s.
1912	R. C. Craig, United States.....	10.8s.
1920	C. W. Paddock, United States.....	10.8s.
1924	H. M. Abrahams, Great Britain.....	10.6s.
1928	Percy Williams, Canada.....	10.8s.
1932	Eddie Tolan, United States.....	10.3s.
1936	Jesse Owens, United States.....	10.3s.*
1948	Harrison Dillard, United States.....	10.3s.
1952	Lindy Remigino, United States.....	10.4s.
1956	Bobby Morrow, United States.....	10.5s.

* With the wind.

200-Meter Run

1900	J. W. B. Tewksbury, United States.....	22.2s.
1904	Archie Hahn, United States.....	21.6s.
1908	R. Kerr, Canada.....	22.4s.

1912	R. C. Craig, United States.....	21.7s.
1920	Allan Woodring, United States.....	22s.
1924	J. V. Scholz, United States.....	21.6s.
1928	Percy Williams, Canada.....	21.8s.
1932	Eddie Tolan, United States.....	21.2s.
1936	Jesse Owens, United States.....	20.7s.
1948	Melvin E. Patton, United States.....	21.1s.
1952	Andrew Stanfield, United States.....	20.7s.
1956	Bobby Morrow, United States.....	20.6s.

400-Meter Run

1896	T. E. Burke, United States.....	54.2.
1900	M. W. Long, United States.....	49.4.
1904	H. L. Hillman, United States.....	49.2.
1906	Paul Pilgrim, United States.....	53.2.
1908	W. Halswelle, Great Britain (walkover).....	50s.
1912	C. D. Reidpath, United States.....	48.2s.
1920	B. G. D. Rudd, South Africa.....	49.6s.
1924	E. H. Liddell, Great Britain.....	47.6s.
1928	Ray Barbuti, United States.....	47.8s.
1932	William Carr, United States.....	46.2s.
1936	Archie Williams, United States.....	46.5s.
1948	Arthur Wint, Jamaica, B.W.I.....	46.2s.
1952	George Rhoden, Jamaica, B. W. I.....	45.9s.
1956	Charles Jenkins, United States.....	46.7s.

800-Meter Run

1896	E. H. Flack, Great Britain.....	2m.11s.
1900	A. E. Tysoe, Great Britain.....	2m.1.4s.
1904	J. D. Lightbody, United States.....	1m.56s.
1906	Paul Pilgrim, United States.....	2m.1.2s.
1908	M. W. Sheppard, United States.....	1m.52.8s.
1912	J. E. Meredith, United States.....	1m.51.9s.
1920	A. G. Hill, Great Britain.....	1m.53.4s.
1924	D. G. A. Lowe, Great Britain.....	1m.52.4s.
1928	D. G. A. Lowe, Great Britain.....	1m.51.8s.
1932	Thomas Hampson, Great Britain.....	1m.49.8s.
1936	John Woodruff, United States.....	1m.52.9s.
1948	Malvin Whitfield, United States.....	1m.49.2s.
1952	Malvin Whitfield, United States.....	1m.49.2s.
1956	Tom Courtney, United States.....	1m.47.7s.

1,500-Meter Run

1896	E. H. Flack, Great Britain.....	4m.33.2s.
1900	C. Bennett, Great Britain.....	4m.6s.
1904	J. D. Lightbody, United States.....	4m.5.4s.
1906	J. D. Lightbody, United States.....	4m.12s.
1908	M. W. Sheppard, United States.....	4m.3.4s.
1912	A. N. S. Jackson, Great Britain.....	3m.56.8s.
1920	A. G. Hill, Great Britain.....	4m.1.8s.
1924	Paavo Nurmi, Finland.....	3m.53.6s.
1928	H. E. Larva, Finland.....	3m.53.2s.
1932	Luigi Beccali, Italy.....	3m.51.2s.
1936	J. E. Lovelock, New Zealand.....	3m.47.8s.
1948	Henri Eriksson, Sweden.....	3m.49.8s.
1952	Joseph Barthel, Luxembourg.....	3m.45.2s.
1956	Ron Delany, Eire.....	3m.41.2s.

5,000-Meter Run

1912	H. Kolehmainen, Finland.....	14m.36.6s.
1920	J. Guillemot, France.....	14m.55.6s.
1924	Paavo Nurmi, Finland.....	14m.31.2s.
1928	Willie Ritola, Finland.....	14m.38s.
1932	Lauri Lehtinen, Finland.....	14m.30s.
1936	Gunnar Hockert, Finland.....	14m.22.2s.
1948	Gaston Reiff, Belgium.....	14m.17.6s.
1952	Emil Zatopek, Czechoslovakia.....	14m.6.6s.
1956	Vladimir Kuts, U.S.S.R.....	13m.39.6s.

5-Mile Run

1906	H. Hawtrey, Great Britain.....	26m.26.2s.
1908	E. R. Voigt, Great Britain.....	25m.11.2s.

10,000-Meter Run

1912	H. Kolehmainen, Finland.....	31m.20.8s.
1920	Paavo Nurmi, Finland.....	31m.45.8s.
1924	Willie Ritola, Finland.....	30m.23.2s.
1928	Paavo Nurmi, Finland.....	30m.18.8s.
1932	Janusz Kucoscinski, Poland.....	30m.11.4s.
1936	Ilmari Salminen, Finland.....	30m.15.4s.
1948	Emil Zatopek, Czechoslovakia.....	29m.59.6s.
1952	Emil Zatopek, Czechoslovakia.....	29m.17s.
1956	Vladimir Kuts, U.S.S.R.....	28m.45.6s.

Marathon

1896	S. Loues, Greece.....	2h.55m.20s
1900	M. Teato, France.....	2h.59m.
1904	T. J. Hicks, United States.....	3h.28m.53s.
1906	W. J. Sherring, Canada.....	2h.51m.23.6s.
1908	John J. Hayes, United States.....	2h.55m.18.4s.
1912	K. K. McArthur, South Africa.....	2h.36m.54.8s.
1920	H. Kolehmainen, Finland.....	2h.32m.35.8s.
1924	A. O. Stenros, Finland.....	2h.41m.22.6s.
1928	El Ouafi, France.....	2h.32m.57s.
1932	Juan Zabala, Argentina.....	2h.31m.36s.
1936	Kitei Son, Japan.....	2h.29m.19.2s.
1948	Delfo Cabrera, Argentina.....	2h.34m.51.6s.
1952	Emil Zatopek, Czechoslovakia.....	2h.23m.3.2s.
1956	Alain Mimoun, France.....	2h.25m.

110-Meter Hurdles

1896	Curtis, United States.....	17.6s.
1900	A. E. Kraenzlein, United States.....	15.4s.
1904	F. W. Schule, United States.....	16s.
1906	R. G. Leavitt, United States.....	16.2s.
1908	Forrest Smithson, United States.....	15s.
1912	F. W. Kelly, United States.....	15.1s.
1920	E. J. Thomson, Canada.....	14.8s.
1924	D. C. Kinsey, United States.....	15s.
1928	S. Atkinson, South Africa.....	14.8s.
1932	George Saling, United States.....	14.6s.
1936	Forrest Towns, United States.....	14.2s.
1948	William Porter, United States.....	13.9s.
1952	Harrison Dillard, United States.....	13.7s.
1956	Lee Calhoun, United States.....	13.5s.

200-Meter Hurdles

1900	A. E. Kraenzlein, United States.....	25.4s.
1904	H. L. Hillman, United States.....	24.6s.

400-Meter Hurdles

1900	J. W. B. Tewksbury, United States.....	57.6s.
1904	H. L. Hillman, United States.....	53s.
1908	C. J. Bacon, United States.....	55s.
1920	F. F. Loomis, United States.....	54s.
1924	F. M. Taylor, United States.....	52.6s.
1928	Lord David Burghley, Great Britain.....	53.4s.
1932	Robert Tisdall, Ireland.....	51.8s.*
1936	Glenn Hardin, United States.....	52.4s.
1948	Ray Cochran, United States.....	51.1s.
1952	Charles Moore, United States.....	50.8s.
1956	Glenn Davis, United States.....	50.1s.

* Record not allowed.

2,500-Meter Steeplechase

1900	G. W. Orton, United States.....	7m.34s.
1904	J. D. Lightbody, United States.....	7m.39.6s.

3,000-Meter Steeplechase

1920	P. Hodge, Great Britain.....	10m.2.4s.
1924	Willie Ritola, Finland.....	9m.33.6s.
1928	T. A. Loukola, Finland.....	9m.21.8s.
1932	Volmari Iso-Hollo, Finland.....	10m.33.4s.*
1936	Volmari Iso-Hollo, Finland.....	9m.3.8s.
1948	Thure Sjostrand, Sweden.....	9m.4.6s.
1952	Horace Ashenfelter, United States.....	8m.45.4s.
1956	Chris Brasher, Great Britain.....	8m.41.2s.

* About 3,450 meters—extra lap by error.

3,200-Meter Steeplechase

1908	A. Russell, Great Britain.....	10m.47.8s.
------	--------------------------------	------------

4,000-Meter Steeplechase

1900	C. Rimmer, Great Britain.....	12m.58.4s.
------	-------------------------------	------------

3,000-Meter Team

1912	United States.....	9 pts.
1920	United States.....	10 pts.
1924	Finland.....	8 pts.

3-Mile Team

1908	Great Britain.....	6 pts.
------	--------------------	--------

8,000-Meter X-Country

1912	H. Kolehmainen, Finland.....	45m.11.6s.

1936	Jesse Owens, United States.....	26 ft. 5 $\frac{1}{4}$ in.
1948	Willie Steele, United States.....	25 ft. 8 in.
1952	Jerome Biffle, United States.....	24 ft. 10.03 in.
1956	Gregory Bell, United States.....	25 ft. 8 $\frac{1}{4}$ in.

Standing Hop, Step, and Jump

1900	R. C. Ewry, United States.....	34 ft. 8 $\frac{1}{2}$ in.
1904	R. C. Ewry, United States.....	34 ft. 7 $\frac{1}{4}$ in.

Running Hop, Step, and Jump

1896	J. B. Connolly, United States.....	45 ft.
1900	Myer Prinstein, United States.....	47 ft. 4 $\frac{1}{4}$ in.
1904	Myer Prinstein, United States.....	47 ft.
1906	P. O'Connor, Ireland.....	46 ft. 2 in.
1908	T. J. Ahearne, Great Britain.....	48 ft. 11 $\frac{1}{4}$ in.
1912	G. Lindblom, Sweden.....	48 ft. 5 $\frac{1}{2}$ in.
1920	V. Tuulos, Finland.....	47 ft. 6 $\frac{1}{2}$ in.
1924	A. W. Winter, Australia.....	50 ft. 11 $\frac{1}{2}$ in.
1928	Mikio Oda, Japan.....	49 ft. 10 $\frac{1}{4}$ in.
1932	Chuhei Nambu, Japan.....	51 ft. 7 in.
1936	Naoto Tajima, Japan.....	52 ft. 5 $\frac{1}{2}$ in.
1948	Arne Ahman, Sweden.....	50 ft. 6 $\frac{1}{4}$ in.
1952	Adhemar da Silva, Brazil.....	53 ft. 2.59 in.
1956	Adhemar da Silva, Brazil.....	53 ft. 7 $\frac{1}{2}$ in.

16-Lb. Shot-put

1896	Robert Garrett, United States.....	36 ft. 2 in.
1900	R. Sheldon, United States.....	46 ft. 3 $\frac{1}{2}$ in.
1904	Ralph Rose, United States.....	48 ft. 7 in.
1906	M. J. Sheridan, United States.....	40 ft. 4 $\frac{1}{2}$ in.
1908	Ralph Rose, United States.....	46 ft. 7 $\frac{1}{2}$ in.
1912	P. J. McDonald, United States.....	50 ft. 4 in.
1920	V. Porhola, Finland.....	48 ft. 7 $\frac{1}{2}$ in.
1924	Clarence Houser, United States.....	49 ft. 2 $\frac{1}{2}$ in.
1928	John Kuck, United States.....	52 ft. 1 $\frac{1}{4}$ in.
1932	Leo Sexton, United States.....	52 ft. 6 $\frac{1}{4}$ in.
1936	Hans Woellke, Germany.....	53 ft. 1 $\frac{1}{2}$ in.
1948	Wilbur Thompson, United States.....	56 ft. 2 in.
1952	Parry O'Brien, United States.....	57 ft. 1.43 in.
1956	Parry O'Brien, United States.....	60 ft. 11 in.

16-Lb. Shot-put (Both Hands)

1912	Ralph Rose, United States.....	90 ft. 5½ in.
------	--------------------------------	---------------

16-Lb. Hammer Throw

1900	J. J. Flanagan, United States.....	167 ft. 4 in.
1904	J. J. Flanagan, United States.....	168 ft. 1 in.
1908	J. J. Flanagan, United States.....	170 ft. 4¼ in.
1912	M. J. McGrath, United States.....	177 ft. 7 in.
1920	P. J. Ryan, United States.....	173 ft. 5½ in.
1924	F. D. Tootell, United States.....	174 ft. 10¼ in.
1928	Patrick O'Callaghan, Ireland.....	168 ft. 7½ in.
1932	Patrick O'Callaghan, Ireland.....	176 ft. 11½ in.
1936	Karl Hein, Germany.....	185 ft. 4 in.
1948	Imre Nemeth, Hungary.....	183 ft. 11½ in.
1952	Jozsef Csermak, Hungary.....	197 ft. 11.67 in.
1956	Harold Connolly, United States.....	207 ft. 2¼ in.

56-Lb. Weight Throw

1904	E. Desmarteau, Canada.....	34 ft. 4 in.
1920	P. J. McDonald, United States.....	36 ft. 11½ in.

Discus Throw

1896	Robert Garrett, United States.....	95 ft. 7½ in.
1900	R. Bauer, Hungary.....	118 ft. 2.9 in.

BASKETBALL

BASKETBALL may be unique in sports. It is one game concerning which it is safe to state when, where and how it originated. In the winter of 1891-92, Dr. James Naismith, an instructor in the Y.M.C.A. Training College (now Springfield College) at Springfield, Mass., deliberately invented the game of basketball in order to provide indoor exercise and competition for the students between the closing of the football season and the opening of the baseball season. He affixed peach baskets overhead on the walls at opposite ends of the gymnasium and, with an association (soccer) football, organized teams to play his new game in which the purpose was to toss the ball into one basket and prevent, as far as possible, the opponents from tossing the ball into the other basket. Fun-

damentally, the game is the same today, though there have been some improvements in equipment and many changes in the rules.

Because Dr. Naismith had eighteen available players when he invented the game, the first rule was: "There shall be nine players on each side." Later the number of players became optional, depending upon the size of the available court, but the five-player standard was adopted when the game spread over the country. United States soldiers introduced the game in Europe in World War I and, being taken up by foreign nations, it soon became a world-wide sport. An odd point is that, though it is still chiefly an indoor game in the United States, in other countries it flourishes almost entirely outdoors.

National Collegiate A. A. Champions

1939—Oregon	1948—Kentucky
1940—Indiana	1949—Kentucky
1941—Wisconsin	1950—C.C.N.Y.

1938—Healey Motors, Kansas City
1939—Denver (Colo.) Nuggets
1940—Phillips Oilers, Bartlesville, Okla.
1941—20th Century-Fox, Hollywood, Calif.
1942—American Legion, Denver, Colo.
1943-48—Phillips Oilers, Bartlesville, Okla.
1949—Oakland (Calif.) Bittners
1950—Phillips Oilers, Bartlesville, Okla.
1951—Stewart Chevrolets, San Francisco
1952-54—Caterpillar Diesels, Peoria, Ill.
1955—Phillips Oilers, Bartlesville, Okla.
1956—Buchan Bakers, Seattle

BOWLING

THE GAME OF bowling that is the favorite sport of millions of "keglers" in the United States is an indoor development of the more ancient outdoor game that survives as lawn bowling. The outdoor game is prehistoric in origin and probably goes back to Primitive Man and round stones that were rolled at some target. It is believed that a game something like nine-pins was popular among the Dutch, Swiss and Germans as long ago as A.D. 1200 at which time the game was played outdoors with an alley consisting of a single plank 12 to 18 inches wide along which was rolled a ball toward three rows of three pins each placed at the far end of the alley. When the first indoor alleys were built and how the game was modified from time to time are matters of dispute. Much of the confusion arises from a lack of certainty as to which game is meant, "bowls" or "bowling", one with a "jack" and the other with "pins", in historical passages.

It is supposed that the early settlers of New Amsterdam (New York City) being Dutch, they brought their two bowling games with them. About a century ago the game of nine-pins was flourishing in the United States but so corrupted by gambling on matches that it was barred by law in New York and Connecticut. Since the law specifically barred "nine-pins", it was eventually evaded by adding another pin and thus legally making it a new game. The genius who thought up that simple method of outwitting the law and putting a popular game in motion once more remained modestly anonymous. With the increase in the number of pins, the old diamond formation of nine-pins was abandoned for the triangle set-up of ten-pins that remains the rule to this day. Various organizations were formed to make rules for bowling and supervise competition in the United States but none was successful until the American Bowling Congress, organized Sept. 9, 1895, became the ruling body.

ATHLETES OF THE YEAR

The Associated Press annually polls outstanding sportswriters and broadcasters throughout the nation to select the outstanding male and female athletes of the year. The winners since 1931:

MALE

Year	Athlete	Sport
1931	Pepper Martin	Baseball
1932	Gene Sarazen	Golf
1933	Carl Hubbell	Baseball
1934	Dizzy Dean	Baseball
1935	Joe Louis	Boxing
1936	Jesse Owens	Track and field
1937	Don Budge	Tennis
1938	Don Budge	Tennis
1939	Nile Kinnick	Football
1940	Tommy Harmon	Football
1941	Joe DiMaggio	Baseball
1942	Frank Sinkwich	Football
1943	Gunder Hagg	Track
1944	Byron Nelson	Golf
1945	Byron Nelson	Golf
1946	Glenn Davis	Football
1947	Johnny Lujack	Football
1948	Lou Boudreau	Baseball
1949	Leon Hart	Football
1950	Jim Konstanty	Baseball
1951	Dick Kazmaier	Football
1952	Bob Mathias	Track and field
1953	Ben Hogan	Golf
1954	Willie Mays	Baseball
1955	Howard (Hopalong) Cassady	Football
1956	Mickey Mantle	Baseball

FEMALE

Year	Athlete	Sport
1931	Helene Madison	Swimming
1932	Mildred (Babe) Didrikson	Track and field
1933	Helen Jacobs	Tennis
1934	Virginia Van Wie	Golf
1935	Helen Wills Moody	Tennis
1936	Helen Stephens	Track
1937	Katherine Rawls	Swimming
1938	Patty Berg	Golf
1939	Alice Marble	Tennis
1940	Alice Marble	Tennis
1941	Betty Hicks Newell	Golf
1942	Gloria Callen	Swimming
1943	Patty Berg	Golf
1944	Ann Curtis	Swimming
1945	Mildred (Babe) Didrikson Zaharias	Golf
1946	Mildred (Babe) Didrikson Zaharias	Golf
1947	Mildred (Babe) Didrikson Zaharias	Golf
1948	Fanny Blankers-Koen	Track
1949	Marlene Bauer	Golf
1950	Mildred (Babe) Didrikson Zaharias	Golf
1951	Maureen Connolly	Tennis
1952	Maureen Connolly	Tennis
1953	Maureen Connolly	Tennis
1954	Mildred (Babe) Didrikson Zaharias	Golf
1955	Patty Berg	Golf
1956	Patricia McCormick	Diving

SULLIVAN AWARD WINNERS

The James E. Sullivan Memorial Award is given annually to the amateur athlete voted by sports leaders as having done the most to advance sportsmanship.

Year	Winner	Sport
1930	Robert T. Jones, Jr.	Golf
1931	Bernard E. Berlinger	Track and field
1932	James A. Bausch	Track and field
1933	Glenn Cunningham	Running
1934	William R. Bonthron	Running
1935	W. Lawson Little, Jr.	Golf
1936	Glenn Morris	Track and field
1937	J. Donald Budge	Tennis
1938	Donald R. Lash	Running
1939	Joseph W. Burk	Rowing
1940	J. Gregory Rice	Running
1941	Leslie MacMitchell	Running
1942	Cornelius Warmerdam	Pole vaulting
1943	Gilbert L. Dodds	Running
1944	Ann Curtis	Swimming
1945	Felix (Doc) Blanchard	Football
1946	Y. Arnold Tucker	Football
1947	John B. Kelly, Jr.	Rowing
1948	Robert B. Mathias	Track and field
1949	Richard T. Button	Figure skating
1950	Fred Wilt	Running
1951	Robert E. Richards	Track and field
1952	Horace Ashenfelter	Running
1953	Major Sammy Lee	Diving
1954	Malvin Whitfield	Track
1955	Harrison Dillard	Track
1956	Patricia McCormick	Diving

HICKOK AWARD WINNERS

The richest award in sports is the \$10,000 S. Rae Hickok Belt, which annually goes to the professional athlete of the year, as selected in a poll of sportswriters and sportscasters throughout the country. The winners:

- 1950—Phil Rizzuto (baseball)
- 1951—Allie Reynolds (baseball)
- 1952—Rocky Marciano (boxing)
- 1953—Ben Hogan (golf)
- 1954—Willie Mays (baseball)
- 1955—Otto Graham (football)
- 1956—Mickey Mantle (baseball)

TOP ATHLETES OF A HALF-CENTURY

In 1950 The Associated Press polled the nation's sports experts on the "greats" in various fields during the past half-century. The list of winners:

- Male athlete—Jim Thorpe.
- Female athlete—Mildred D. Zaharias.
- Baseball player—Babe Ruth.
- Football player—Jim Thorpe.
- Fighter—Jack Dempsey.
- Basketball player—George Mikan.
- Track performer—Jesse Owens.
- Golfer—Bobby Jones.
- Tennis player—Bill Tilden.
- Swimmer—Johnny Weissmuller.
- Race horse—Man o' War.
- Greatest upset—The Boston Braves' four-straight world series victory over the Philadelphia Athletics in 1914.

ROWING

ROWING goes back so far in history that there is no possibility of tracing it to any particular aboriginal source. The oldest rowing race still on the calendar is the "Doggett's Coat and Badge" contest among professional watermen of the Thames (England) that began in 1715. The first Oxford-Cambridge race was held at Henley in 1829. Competitive rowing in the United States began with matches between boats rowed by professional oarsmen of the New York water front. They were oarsmen who rowed the small boats that plied as ferries from Manhattan Island to Brooklyn and return, or who rowed salesmen down the harbor to meet ships arriving from Europe. Since the first salesman to meet an incoming ship had some advantage over his rivals, there was keen competition in the bidding for fast boats and the best oarsmen. This gave rise to match races for a purse or a side bet on many occasions. The first of such races was held in June, 1811, in four-oared gigs.

Amateur boat clubs sprang up in the United States between 1820 and 1830 and

seven students of Yale joined together to purchase a four-oared lap-streak gig in 1843. The first Harvard-Yale race was held Aug. 3, 1852, on Lake Winnepesaukee, N. H. The first time an American college crew went abroad was in 1869 when Harvard challenged Oxford and was defeated on the Thames. There were early college rowing races on Lake Quinsigamond, near Worcester, Mass., and on Saratoga Lake, N. Y., but the Intercollegiate Rowing Association, in 1895, settled on the Hudson, at Poughkeepsie, as the setting for the annual "Poughkeepsie Regatta." In 1950 the I.R.A. shifted its classic to Marietta, Ohio, and in 1952 it was moved to Syracuse, N. Y. The National Association of Amateur Oarsmen, organized in 1872, has conducted annual championship regattas since that time. The first rowing races were held with lap-streak gigs but shells came into general favor about a century ago. The outrigger was invented in 1830 by Clasper, an Englishman. Yale used the sliding seat in 1870.

Rowing Statistics

ICE HOCKEY

ICE HOCKEY, by birth and upbringing a Canadian game, is an offshoot of field hockey. Some historians state that the first ice hockey game was played in Montreal in December, 1879, between two teams composed almost exclusively of McGill University students, but others assert that Kingston, Ont., or Halifax, N. S., were scenes of earlier hockey games. In the Montreal game of 1879 there were fifteen players on a side and they used an assortment of crude sticks to keep the puck in motion. Early rules allowed nine men on a side but the number was reduced to seven in 1886 and finally reduced to six, the standard of today.

The first governing body of the sport was the Amateur Hockey Association of Canada, organized in 1887. In the winter of 1894-95 a group of college students from the United States visited Canada, saw hockey played, became enthused over the game and introduced it as a winter sport when they returned home. This was the

start of hockey in the United States. The first professional league was the International Hockey League that operated, strangely enough, not in Canada but in northern Michigan in 1904-06 and included as players such famous stars as Cyclone Taylor and Hod Stuart, later included in the Hockey Hall of Fame.

Until 1910, professionals and amateurs were allowed to play together on "mixed teams," but this arrangement ended with the formation of the first "big league," the National Hockey Association, in eastern Canada in 1910. The Pacific Coast League, to provide professional hockey in the West, was organized in 1911 with Seattle (and later other American cities) included in the circuit. The National Hockey League replaced the National Hockey Association in 1917. Boston, in 1924, was the first American city to join that circuit. The Stanley Cup, top trophy of hockey, was competed for by "mixed teams" from 1894 to 1910, thereafter by professionals.

* March.

† The Montreal Canadiens and Seattle, P.C.H.L. champions, had played five games at Seattle, Wash., when an influenza epidemic (which took the life of Joe Hall of the Canadiens) caused the Department of Health to stop the series. Each team won two games, with one contest ending in a tie.

MOST VALUABLE PLAYER

The Hart Trophy

Awarded annually to the player considered most valuable to his team in the regular N. H. L. season.

BOXING

WHETHER it be called pugilism, prize fighting or boxing, there is no tracing "the Sweet Science" to any definite source. Tales of rivals exchanging blows for fun, fame or money go back to earliest recorded history and classical legend. There was a mixture of boxing and wrestling called the "pancratium" in the ancient Olympic Games and in such contests the rivals belabored one another with hands fortified with heavy leather wrappings that were sometimes studded with metal. More than one Olympic competitor lost his life at this brutal exercise.

There was little law or order in pugilism until Jack Broughton, one of the early champions of England, drew up a set of rules for the game in 1743. Broughton, called "the father of English boxing," also is credited with having invented boxing gloves. However, these gloves—or "mufflers" as they were called—were used only in teaching "the manly art of self-defense" or in training bouts. All professional

championship fights were contested with "bare knuckles" until 1892 when John L. Sullivan lost the heavyweight championship of the world to James J. Corbett in New Orleans in a bout in which both contestants wore regulation gloves.

The Broughton rules were superseded by the London Prize Ring Rules of 1838. The 8th Marquess of Queensberry, with the help of John G. Chambers, put forward the "Queensberry Rules" in 1866, a code that called for gloved contests. Amateurs took quickly to the Queensberry Rules, the professionals slowly.

There is no official international set of rules for boxing even today. Amateur organizations set rules for amateurs in different countries and professional rules set by boxing commissions vary even in different sections of the United States, but the variations are for the most part minor. A prize fighter doesn't have to change his style greatly to ply his trade anywhere in the world.

Sept. 23, 1952	Philadelphia.	(c)Rocky Marciano, 184 (28)	Joe Walcott, 196 (38)	KO 13	Charley Daggert
Nov. 30, 1956	Chicago.	Floyd Patterson, 182¾ (21)	Archie Moore, 187¾ (39)	KO 5	Frank Sikora

* Lack of opposition caused Jeffries to retire in March 1905. He named Marvin Hart and Jack Root as the leading contenders and agreed to referee their fight at Reno, Nev., on July 3, 1905, with the stipulation that he would designate the winner the world champion. Hart, 190 (28), knocked out Root, 171 (29), in the twelfth round. † Burns claimed the title after defeating Hart. Philadelphia Jack O'Brien became another claimant after fighting a 20-round draw with Burns at Los Angeles on Nov. 28, 1906, with Jeffries as the referee. Burns, 180 (25), eliminated O'Brien, 167 (29), by defeating him in 20 rounds at Los Angeles, May 8, 1907. Charles Eytton was the referee. ‡ Tunney retired after his bout with Tom Heeney in New York on July 26, 1928. Tunney, 192 (30), knocked out Heeney, 203 (30½), in the eleventh round. Ed Forbes was the referee.

(a) Recognized by the National Boxing Association because Louis had announced his retirement on March 1, 1949. (b) Charles gained undisputed possession of the title by beating Louis, who came out of retirement in an effort to regain the crown. (c) Marciano retired April 27, 1956.

BARE-KNUCKLE HEAVYWEIGHT CHAMPIONS, 1719-1892

- 1719—Jim Figg
 1734—George Taylor
 1740—Jack Broughton
 1750—Jack Slack
 1760—Bill Stevens
 1761—George Meggs
 1765—Bill Darts
 1777—Harry Sellers
 1780—Jack Harris
 1785—Tom (Jackling) Johnson
 1790—Big Ben Brain
 1792—Daniel Mendoza
 1795—John Jackson (retired)
 1802—Jem Belcher
 1805—Henry Pearce (Game Chicken)
 1808—John Gully (declined title)
 1809—Tom Cribb received belt, not transferable, and cup
 1824—Tom Spring received four cups; resigned title.
 1825—Jem Ward received belt, not transferable.
 1838—James (Deaf) Burke claimed title.
 1839—William Thompson (Bendigo) beat Burke; claimed championship; received belt from Jem Ward.
 1841—Nick Ward (Jem's brother) beat Ben Caunt, Feb. 2. In return match Caunt beat Nick Ward and received belt by subscription. It was transferable.
 1845—Thompson beat Caunt and got belt.
 1850—Bill Perry (The Tipton Slasher), after fight with Paddock, claimed title.
 1851—Harry Broome won title from Perry.
 1853—Perry claimed title when Broome forfeited £200 to him in a match; retired from ring on Aug. 13.
 1857—Tom Sayers beat Perry for £200 a side and new belt.
 1860—Sayers retired after 42-round draw with John C. Heenan (The Benicia Boy), leaving old belt open for competition.
 1860—Sam Hurst (The Stalybridge Infant) beat Paddock and received belt.
 1861—Jem Mace beat Hurst.
 1862—Mace beat Tom King for £200 a side and the belt.
 1862—King beat Mace and claimed belt. Subsequently gave it up. Declined to meet Mace again. Mace claimed belt.
 1863—King beat Heenan for £1,000 a side.
 1865—Joe Wormald beat Andrew Marsden for £200 a side and belt, which had been claimed by both. Belt was given to Wormald, who forfeited £120 to Mace.
 1866—Mace and Joe Goss fought draw with £200 a side and belt at stake.
 1867—Wormald received £200 forfeit from Ned O'Baldwin and claimed belt when O'Baldwin failed to appear at starting place.
 1867—Mace and O'Baldwin drew; £200 a side; title and belt in abeyance.
 1868—Wormald and O'Baldwin drew; £200 a side and title in America.
 1869—Mike McCool beat Tom Allen in America for world championship.
 1870—Mace beat Allen in America for world championship.
 1871—Mace and Joe Coburn fought draw for championship; £500 a side.
 1882—John L. Sullivan defeated Paddy Ryan for American championship only; 9 rounds, Mississippi City, Miss. (London Prize Ring rules).
 1885—Jem Smith beat Jack Davis for £100 a side and championship of England.
 1887—Jake Kilrain and Jem Smith drew; \$10,000 and Police Gazette Championship of World belt.
 1889—John L. Sullivan beat Jake Kilrain, 75 rounds, Richburg, Miss., July 8, in last bare-knuckle championship fight; \$10,000 a side and Police Gazette Belt. (Sullivan claimed world title because of draw fought by Kilrain with Smith, England's titleholder.)

Other World Boxing Titleholders

LIGHT HEAVYWEIGHT CHAMPIONS

1903 —Jack Root, George Gardner
 1903-05—Bob Fitzsimmons
 1905-12—Philadelphia Jack O'Brien
 1912-16—Jack Dillon
 1916-20—Battling Levinsky
 1920-22—Georges Carpentier
 1923 —Battling Siki
 1923-25—Mike McTigue
 1925-26—Paul Berlenbach
 1926-27—Jack Delaney (a)
 1927 —Mike McTigue
 1927-29—Tommy Loughran (a)
 1930-34—Maxie Rosenbloom
 1934-35—Bob Olin
 1935-39—John Henry Lewis (a)
 1939 —Melio Bettina
 1939-41—Billy Conn (a)
 1941-48—Gus Lesnewich
 1948-50—Freddie Mills
 1950-53—Joey Maxim
 1953 —Archie Moore
 (a) Abandoned title.

MIDDLEWEIGHT CHAMPIONS

1867-72—Tom Chandler (bare knuckles).
 1872-81—Geo. Rourke (bare knuckles and gloves)
 1881-82—Mike Donovan (r)
 1884-91—Jack (Nonpareil) Dempsey
 1891-97—Bob Fitzsimmons
 1897-1907—Tommy Ryan, Kid McCoy, Philadelphia Jack O'Brien (t)
 1907-08—Stanley Ketchel
 1908 —Billy Papke
 1908-10—Stanley Ketchel
 1910-13—Billy Papke
 1913 —Frank Klaus
 1913-14—George Chip
 1914-17—Al McCoy
 1917-20—Mike O'Dowd
 1920-23—Johnny Wilson
 1923-26—Harry Greb
 1926 —Tiger Flowers
 1926-31—Mickey Walker (a)
 1931-32—Gorilla Jones (NBA); Ben Jeby (N. Y. Comm.)
 1932-37—Marcel Thil*
 1938 —Al Hostak and Solly Krieger (NBA)
 1939 —Solly Krieger, Al Hostak (NBA); Ceferino Garcia (N. Y. Comm.)
 1940 —Tony Zale (NBA); Ken Overlin (N. Y. Comm.)
 1941 —Tony Zale (NBA); Billy Soose (N. Y. Comm.)
 1941-47—Tony Zale
 1947-48—Rocky Graziano
 1948 —Tony Zale
 1948-49—Marcel Cerdan
 1949-51—Jake La Motta
 1951 —Ray Robinson, Randy Turpin
 1951-52—Ray Robinson (r)
 1953-55—Carl Olson
 1955-57—Ray Robinson
 1957 —Gene Fullmer
 1957 —Ray Robinson
 1957 —Carmen Basilio

(r) Retired. (t) Title claimants. (a) Abandoned title. Thil's victory on a foul over Jones gave him a clear title claim, but the New York Commission withheld recognition. At various times during the 1932-37 period, championship recognition by the different bodies was given to the following: Ben Jeby, Lou Brouillard, Vince Dundee, Teddy Yarosz, Babe Risko, and Freddy Steele. Fred Apostoli knocked out Thil in 10 rounds at the Polo Grounds, Sept. 23, 1937, but did not claim the title because of an agreement made with Thil. This was Thil's last fight.

WELTERWEIGHT CHAMPIONS

1892-94—Mysterious Billy Smith
 1894-96—Tommy Ryan
 1896 —Kid McCoy (o)
 1900 —Rube Ferns, Matty Matthews
 1901 —Rube Ferns
 1901-06—Joe Walcott*
 1906-07—Honey Mellody
 1907 —Mike (Twin) Sullivan†
 1915 —Ted Lewis†
 1919-22—Jack Britton
 1922-26—Mickey Walker
 1926-27—Pete Latzo
 1927-29—Joe Dundee
 1929-30—Jackie Fields
 1930 —Young Jack Thompson
 1930-31—Tommy Freeman
 1931 —Young Jack Thompson
 1931-32—Lou Brouillard
 1932-33—Jackie Fields
 1933 —Young Corbett 3d
 1933-34—Jimmy McLarnin
 1934 —Barney Ross
 1934-35—Jimmy McLarnin
 1935-38—Barney Ross
 1938-40—Henry Armstrong
 1940-41—Fritzie Zivic
 1941-46—Freddie Cochrane
 1946-47—Marty Servo (r)
 1947-51—Ray Robinson (a)
 1951 —Johnny Bratton (NBA)
 1951-54—Kid Gavilan
 1954-55—Johnny Saxton
 1955 —Tony DeMarco
 1955-56—Carmen Basilio
 1956 —Johnny Saxton
 1956-57—Carmen Basilio (a)

(o) Outgrew class. * Walcott lost on foul to Dixie Kid in 1904, but decision was disputed. Dixie Kid went abroad, outgrew class, and Walcott was again recognized as the champion. † Sullivan outgrew class. The title was claimed by Jimmy Gardner, Jimmy Clabby, Ray Bronson, Clarence (Kid) Ferns, Mike Gibbons, Kid Graves, Mike Glover, Ted Lewis, and Jack Britton but no one received recognition as titleholder until Ted Lewis established his claim in 1915. ‡ Lewis outpointed Britton to gain undisputed possession of the crown on Aug. 31, 1916, and fought Britton a number of times over a period of four years with varying results until March 17, 1919, when Britton became the undisputed titleholder by knocking out Lewis. (r) Retired. (a) Abandoned title.

Famous Firsts in Boxing

First set of boxing rules and first set of boxing gloves: Made by Jack Broughton, 1743.

First glove fight: Between two English boxers, at Aix-la-Chapelle, France, October 8, 1818.

First million-dollar gate: Jack Dempsey vs. Georges Carpentier at Boyle's Thirty Acres, Jersey City, N. J., July 2, 1921 (\$1,789,238).

First round-by-round fight broadcast: Dempsey vs. Carpentier, 1921, J. Andrew White announcer.

First fight on television (publicly screened): Eric Boon vs. Arthur Danahar, Harringay Arena, London, England, February 23, 1939.

LIGHTWEIGHT CHAMPIONS

- 1885-96—Jack McAuliffe*
 1896-99—Kid Lavigne
 1899-02—Frank Erne
 1902-08—Joe Gans
 1908-10—Battling Nelson
 1910-12—Ad Wolgast
 1912-14—Willie Ritchie
 1914-17—Freddy Welsh
 1917-25—Benny Leonard (r)
 1925 —Jimmy Goodrich
 1925-26—Rocky Kansas
 1926-30—Sammy Mandell
 1930 —Al Singer
 1930-33—Tony Canzoneri
 1933-35—Barney Ross
 1935-36—Tony Canzoneri
 1936-38—Lou Ambers
 1938-39—Henry Armstrong
 1939-40—Lou Ambers
 1940-41—Lew Jenkins
 1941-42—Sammy Angott (a)
 1943 —Beau Jack, Bob Montgomery (N. Y. Comm.), Sammy Angott (NBA).
 1944 —Beau Jack, Bob Montgomery (N. Y. Comm.), Sammy Angott, Juan Zurita (NBA).
 1945 —Bob Montgomery (N. Y. Comm.), Juan Zurita, Ike Williams (NBA).
 1946-47—Bob Montgomery (N. Y. Comm.), Ike Williams (NBA).
 1947-51—Ike Williams
 1951-52—James Carter
 1952 —Lauro Salas
 1952-54—James Carter
 1954 —Paddy DeMareo
 1954-55—James Carter
 1955-56—Wallace Smith
 1956 —Joe Brown

* McAuliffe was champion of America, but never held the world crown, his battle for the world title with Jem Carney of England in 1887 resulting in a 74-round draw. (r) Retired. (a) Abandoned title.

FEATHERWEIGHT CHAMPIONS

- 1889 —Freddy Bogan
 1890 —Billy Murphy
 1892-1900—George Dixon
 1900-01—Terry McGovern
 1901 —Young Corbett (o)
 1904-08—Brooklyn Tommy Sullivan
 1908-12—Abe Attell
 1912-23—Johnny Kilbane
 1923 —Eugene Crique
 1923-25—Johnny Dundee (o)
 1925-27—Louis (Kid) Kaplan (o)
 1927-28—Benny Bass
 1928 —Tony Canzoneri
 1928-29—Andre Routis
 1929-32—Battling Battalino (o)
 1932 —Tommy Paul (NBA); Kid Chocolate (N. Y. Comm.).
 1933-36—Freddie Miller
 1936-37—Petey Sarron
 1937-38—Henry Armstrong (a)
 1938-40—Joey Archibald
 1940-41—Harry Jeffra, Joey Archibald
 1941-42—Chalky Wright
 1942-48—Willie Pep
 1948-49—Sandy Saddler
 1949-50—Willie Pep
 1950-57—Sandy Saddler(a)
 1957 —Kid Bassey

(o) Outgrew class. (a) Abandoned title.

BANTAMWEIGHT CHAMPIONS

- 1890-92—George Dixon (o)
 1894-99—Jimmy Barry (r)
 1899-1900—Terry McGovern (o)
 1901 —Harry Harris (o)
 1902-03—Harry Forbes
 1903-04—Frankie Neil
 1904 —Joe Bowker (o)
 1905-07—Jimmy Walsh (o)
 1910-14—Johnny Coulon
 1914-17—Kid Williams
 1917-20—Pete Herman
 1920-21—Joe Lynch
 1921 —Pete Herman
 1921-22—Johnny Buff
 1922-24—Joe Lynch
 1924 —Abe Goldstein
 1924-25—Eddie (Cannonball) Martin
 1925 —Charlie (Phil) Rosenberg (d)
 1929-35—Al Brown
 1935-36—Baltazar Sangchili
 1936 —Tony Marino
 1936-37—Sixto Escobar
 1937-38—Harry Jeffra
 1938-40—Sixto Escobar (r)
 1940-42—Lou Salica
 1942-47—Manuel Ortiz
 1947 —Harold Dade
 1947-50—Manuel Ortiz
 1950-52—Vic Towel
 1952-54—Jimmy Carruthers (r)
 1954-56—Robert Cohen
 1956-57—Mario D'Agata
 1956 —Raul Macias (NBA)
 1957 —Alphonse Halima

(o) Outgrew class. (r) Retired. (d) Deprived of title when unable to make weight for championship bout.

FLYWEIGHT CHAMPIONS

- 1916-23—Jimmy Wilde
 1923-25—Pancho Villa*
 1925 —Frankie Genaro
 1925-27—Fidel La Barba (r)
 1927 —Corporal Izzy Schwartz†
 1930 —Midget Wolgast (N. Y. Comm.); Frankie Genaro (NBA).
 1931-32—Young Perez
 1932-35—Jackie Brown
 1935-38—Benny Lynch (r)
 1939 —Peter Kane (a)
 1943-47—Jackie Paterson (d)
 1947-50—Rinty Monaghan (r)
 1950 —Terry Allen
 1950-52—Dado Marino
 1952-54—Yoshio Shirai
 1954 —Pascual Perez

* Villa died in 1925, Genaro claiming title. † Schwartz was recognized as champion by N. Y. Comm., but conditions in the class became confused and were not straightened out until an elimination tourney was held in November, 1929. (r) Retired. (a) Abandoned title. (d) Deprived of title.

Marciano Was Unbeaten as a Pro

Rocky Marciano, heavyweight boxing champion of the world and winner of each of his 49 fights as a professional, announced his retirement from the ring on April 27, 1956. He is the only heavyweight champion ever to retire without losing a professional fight or even boxing to a draw.

Marciano won the title on Sept. 23, 1952, in Philadelphia, by knocking out Joe Walcott in the 13th round. He defended his crown six times. His gross purses for his 49 bouts have been estimated at \$2,000,000.

Marciano was born in Brockton, Mass., on Sept. 1, 1924.

Of his 49 victories, the retired champion scored 43 by knockouts, more than half of them within three rounds.

These were Marciano's championship fights:

*Sept. 23, 1952—Joe Walcott, Philadelphia.....	KO 13
May 15, 1953—Joe Walcott, Chicago.....	KO 1
Sept. 24, 1954—Roland LaStarza, New York.....	KO 11
June 17, 1954—Ezzard Charles, New York.....	W 15
Sept. 17, 1954—Ezzard Charles, New York.....	KO 8
May 16, 1955—Don Cockell, San Francisco.....	KO 9
Sept. 21, 1955—Archie Moore, New York.....	KO 9

* Won title.

TRACK AND FIELD

RUNNING, jumping, hurdling and throwing weights—track and field sports, in other words—are as natural to boys and young men as eating, drinking and breathing. Unorganized competition in this form of sport goes back beyond the Cave Man era. Organized competition begins with the first recorded Olympic Games in Greece, 776 B. C., when Coroebus of Elis won the only event on the program, a race of approximately 200 yards. The Olympic Games, with an ever-widening program of events, continued until “the glory that was Greece” had faded and “the grandeur that was Rome” was tarnished, and finally were abolished by decree of Emperor Theodosius I of Rome in A. D. 394. The Tailteann Games of Ireland are supposed to have antedated the first Olympic Games by some centuries, but we have no records of the specific events and winners thereof.

Professional contests of speed and strength were popular at all times and in many lands, but the widespread competition of amateur athletes in track and field

sports is a comparatively modern development. The first organized amateur athletic meet of record was sponsored by the Royal Military Academy at Woolwich, England, in 1849. Oxford and Cambridge track and field rivalry began in 1864 and the English amateur championships were established in 1866. In the United States such organizations as the New York Athletic Club and the Olympic Club of San Francisco conducted track and field meets in the 1870's, and a few colleges joined to sponsor a meet in 1874. The success of the college meet led to the formation of the Intercollegiate Association of Amateur Athletes of America and the holding of an annual set of championship games beginning in 1876.

Many athletic clubs joined the National Association of Amateur Athletes of America, formed in 1879, but dissension broke up this organization and the Amateur Athletic Union, organized in 1888, has been the ruling body in American amateur athletics since that time.

Four-Minute Mile Becomes Commonplace

The four-minute mile became so commonplace in 1957 that a runner actually beat the once unattainable figure and finished no better than fourth. He was England's Ken Wood, who was clocked in

3:59.3 in a London meet. That day, in Stockholm, Dan Waern of Sweden ran the mile in 3:59.3. The record of miles under 4 minutes:

Time	Runner and country	Site	Date

BILLIARDS

APPARENTLY nobody knows where billiards originated. Some trace the game back to ancient Greece or early Egyptian days; others insist it originated in France or England in medieval times. Shakespeare must have believed the Egyptian tale, because in *Antony and Cleopatra* he has Cleopatra saying: "Let's to billiards; come, Charmian." There is an illustration of Louis XIV of France playing billiards in 1694 and using a shovel-shaped stick to set the "cue ball" in motion, from which it is evident that the pointed cue was a later development.

Certainly the game was popular in England and on the Continent in the 17th and 18th centuries and early settlers in North America are supposed to have introduced the game here. How to apply

"english" to a billiard ball was discovered by Jack Carr, an Englishman, in 1820. A Frenchman named Mingaud is credited with having invented the "draw" shot at about the same time and also to have devised leather tips for wooden cues. Championship competition, amateur and professional, is a modern development in billiards. The first formal professional tournament held in the United States took place in New York in 1863 with eight players competing. The first three-cushion tournament was held in St. Louis in 1878. The first intercollegiate billiard match, billed as a "Grand Trial of Skill" took place on July 25, 1860, at Worcester, Mass. The freshman class of Harvard defeated the freshman class of Yale.

SWIMMING

THERE IS THE ancient tale of Leander of Abydos swimming the Hellespont nightly to call on Helen of Sestos but nobody kept the time on his trips. However, Lord Byron swam one leg of the old Leander course, Sestos to Abydos, on May 3, 1810, in 1 hour 10 minutes. The famous British poet was a noted swimmer and once, in an endurance trial at Venice, was in the water for 4 hours 10 minutes. Distance swimming was the early type of competition. Captain Matthew Webb achieved fame by being the first to swim the English Channel—Dover to Calais—in August, 1875, in 21 hours 45 minutes. Many other swimmers, men and women, have conquered the

Channel since that time. Gertrude Ederle, of New York City, was the first woman to accomplish the feat. Miss Ederle swam the Channel Aug. 6, 1926, in 14 hours 34 minutes, breaking the existing record at that time. Since then the record has been lowered by a number of men and women.

Regular competition at short as well as long distances and indoor as well as outdoor came with the development of such organizations as the Amateur Athletic Union and the building of indoor and outdoor swimming pools. Swimming has been on the Olympic program since the start of the modern Olympic Games at Athens in 1896.

WORLD RECORDS

In a move to end confusion over world records, the International Amateur Swimming Federation (F.I.N.A.) began in 1957 to recognize only those marks which are made in 50-meter or 55-yard pools. As of May 1, 1957, all previously recognized records established in pools of other lengths were wiped out. Some of these were replaced when the F.I.N.A. certified new records at a meeting on Aug. 14-15, 1957 but others continued open.

Where no record yet has been authorized for a standard distance, the table of world records below lists the mark as "vacant." The time given in such a case is the lowest the F.I.N.A. will consider for record application for the event.

West Virginian Crowned Marbles King

Stanley Herold of Summersville, W. Va., won the boys' national championship at the annual national marbles tournament at Asbury Park, N. J., in 1957. The 12-

year-old West Virginian won the title after five days of play against 42 other state and regional champions. Lois Fusco, 13, of Yonkers, N. Y., won the girls' crown.

AUTO RACING

THE FIRST automobiles on the road were erratic in action and driving them or even riding in them was considered a trifle risky, hence it became the sporting thing to do. Experimental excursions in crude cars gave rise to rivalry in speed over the rough roads of the Gay Nineties and this eventually led to formal contests, the first of which was a road race from Paris to Rouen in 1894, with 26 cars showing up at the starting line. Formal competition in the United States started with a road race in the Chicago district on Thanksgiving Day, 1895, and the winner, J. F. Duryea, covered the road distance of 54.36 miles at the astonishing average of 7.5 miles per hour!

Around 1900 Paris became the hub of road racing in Europe and each year there were raucous, dusty and dangerous races from Paris to Berlin, to Vienna, to Madrid

and other cities on the Continent. Accidents were so numerous to drivers and spectators that, after a gory group of mishaps in the forepart of the Paris-Madrid race of 1903, the contest was halted at Bordeaux by public authorities and all road racing was brought under control. Other kinds of auto racing were exposed to view. Some contests, including 24-hour races for stock models, were held on circular or oval tracks originally built for horse racing. Finally came the special racing strips for autos, including such famous autodromes as Brooklands in England and the Indianapolis Speedway in the United States.

As a test of engine and chassis under severe conditions and great strain, auto racing rendered invaluable assistance in the development of the motor car of today.

History of the One-Mile Speed Mark

The first recorded effort for one mile was made in 1898 by Chasseloup-Laubat, driving a Jentaud, in France. His average was 39.23 m.p.h. This was increased to 65.79 in 1899 by Jenatzy, also in France. The first man to travel better than 100 m.p.h. was Rigolly, in 1904, at 103.56 m.p.h., followed by Baras, with 104.53 in the same year. The first over 200 m.p.h. was Major H. O. D. Segrave, who drove at 203.79 in 1927 at Daytona, Florida.

In 1947 John Cobb of London became the first person to travel more than 400 m.p.h. on land. The Englishman accomplished the

feat on Sept. 16 at Bonneville, Utah, while raising the world mile record to 394.196 m.p.h. and the world kilometer (.62137 of a mile) mark to 393.825 m.p.h.

Cobb's fastest mile was covered in 8.93 seconds and his average speed was 9.1325 seconds. The Briton drove at the rate of 385.645 m.p.h. for the mile and 388.019 for the kilometer on the southward run, then increased his pace to 403.135 m.p.h. and 399.808, respectively, on the northward sprint, the best times ever recorded.

Those who drove 300 m.p.h. or better follow (all at Bonneville):

Date	Driver	Car	Average
Sept. 3, 1935	Sir Malcolm Campbell	Bluebird Special	301.1292
Nov. 19, 1937	Capt. G. E. T. Eyston	Thunderbolt #1	311.42
Aug. 27, 1938	Capt. G. E. T. Eyston	Thunderbolt #1	345.5
Sept. 15, 1938	John Cobb	Railton	350.2
Sept. 16, 1938	Capt. G. E. T. Eyston	Thunderbolt #1	357.5
Aug. 23, 1939	John Cobb	Railton Red Lion	368.9
Sept. 16, 1947	John Cobb	Railton Mobil Special	394.196

Hanks Shatters "500" Speed Records

Sam Hanks, 42-year-old auto racing driver, broke all records for the Indianapolis 500-mile race when he won the 41st running of the event on Memorial Day in 1957. Traveling the 200 laps in 3 hours 41 minutes 14.25 seconds, Hanks hit an

average speed of 135.601 miles an hour, eclipsing the old record of 130.840 miles an hour set by the late Bill Vukovich in 1954. The victory was Hanks' first in the Indianapolis event. It was his 12th start. In 1956 he placed second.

MOTORBOATING

SINCE the source of power—the internal combustion engine—is the same in the motorboat as it is in the automobile, the history of motorboat racing parallels that of auto racing. There was a sporting risk in driving the early power boats. As soon as they began to show a degree of dependability, there came the informal rivalries of the rivers and lakes. These led to the formal contests of speed and endurance

over marked courses under the control of the American Power Boat Association. The races were severe tests of all parts of power boats and what was learned in the annual Gold Cup competition, which started in 1904, caused a great improvement in the designing of engines and hulls. The development of the outboard motor opened up another branch of power boat competition of wide popularity.

Motorboating Statistics

Source: Bernadette M. Harper, Executive Secretary, American Power Boat Association.

GOLD CUP WINNERS

Beginning with 1922 the race for the American Power Boat Association Gold Cup was open only to displacement boats of over 25 feet in length and powered with motors of not more than 625 inches piston displacement.

In 1945 the rules were liberalized to encourage the entry of smaller, less expensive craft. Boats now are required to be between 10 and 40 feet in length, with horsepower unlimited.

POLO

POLO originated "somewhere east of Suez" but exactly where never has been determined. There is pictorial proof that it was played many centuries ago in Persia, Japan, China and Tibet, but it reached England by way of a border tribe in India known as the Manipuri. British army officers in India, about 1860, found the Manipuri playing polo and learned the game from them. The fact that the Manipuri used small native horses—they had no others—was the reason for the early height limit (14 hands) on polo mounts, from which arose the custom of calling them "polo ponies," which was abandoned in 1919.

In 1869 some officers of the 10th Hussars, returning from India, introduced the game in England and informal games were played with as many as eight players on a side. Formal competition at Hurlingham, the great shrine of the game, began in 1876 with five players on a side, which

number was cut to four in 1882. In 1884 an outstanding English player by the name of John Watson invented the backhand stroke and much improved the tactics of the game.

James Gordon Bennett, Jr., noted American newspaper owner and editor, saw polo at Hurlingham in 1875, brought the implements to this country, had a carload of cow ponies sent up from Texas and promoted a game that was played indoors at the Dickel Riding Academy at Fifth Avenue and 39th Street, New York City, in 1876. Polo moved outdoors to the Jerome Park race course and other suitable places soon after. One field on which it was played, at Fifth Avenue and 110th Street, was taken over by the New York baseball team in the National League and that is why the field on which the "Giants" play ball, although there since have been two changes in site, still is called "the Polo Grounds."

La. Institute Wins Weight Title

Southwestern Louisiana Institute won the national collegiate weightlifting championship in 1957. The Louisiana weightmen scored 22½ points. The University of Hawaii was second with 10.

300s, Back to Back

Ned Day, former national individual match bowling champion, rolled two successive 300 games in 1957. They brought to 83 the number of perfect games he has bowled.

NATIONAL OPEN POLO CHAMPIONS

Not held from 1905 to 1909, inclusive; 1911, 1915, 1917, 1918, and from 1942 to 1945, inclusive.

1956	Ch. Roadcoach Roadster	Dalmatian	Mrs. Sydney K. Allman, Jr.

HORSE RACING

ANCIENT DRAWINGS on stone and bone prove that horse racing is at least 3000 years old, but Thoroughbred Racing is a modern development. Practically every thoroughbred in training today traces its registered ancestry back to one or more of three sires that arrived in England about 1728 from the Near East and became known, from the names of their owners, as the Byerly Turk, the Darley Arabian and the Godolphin Arabian. The Jockey Club (English) was founded at Newmarket in 1750 or 1751 and became the custodian of the Stud Book as well as the court of last resort in deciding turf affairs.

There was horse racing in this country before the Revolution, but the great lift to the breeding industry came with the importation in 1798, by Col. John Hoomes of Virginia, of Diomed, winner of the Epsom Derby of 1780. Diomed's lineal descendants included such famous stars of the American turf as American Eclipse and Lexington. From 1800 to the time of the Civil War there were race courses and breeding establishments plentifully scattered through Virginia, North Carolina, South Carolina, Tennessee, Kentucky and

Louisiana. In fact, thoroughbred racing was largely a Southern sport and that was one reason why the Confederacy had such excellent cavalry in the Civil War. A century ago crack horses were matched in four-mile races that were run in heats, best two out of three!

The oldest stake event in North America is the Queen's Plate, a Canadian fixture that was first run in the Province of Quebec in 1836. The oldest stake event in the United States is The Travers, which was first run at Saratoga in 1864. The gambling that goes with horse racing and trickery by jockeys, trainers, owners and track officials caused attacks on the sport by reformers and a demand among horse racing enthusiasts for an honest and effective control of some kind, but nothing of lasting value to racing came of this until the formation of The Jockey Club in 1894. The Jockey Club, composed of about sixty members chosen from the aristocracy of the turf, was all-powerful in racing regulation until the State Racing Commissions came into being as a result of mutual betting and the great revenues that came with the tax on the "daily handle."

Horse Racing Statistics

Nashua Shatters Money-Winning Record

By annexing the winner's purse of \$22,750 in the Camden Handicap at Garden State Park on May 19, 1956, the 4-year-old Nashua became the biggest money-winning race horse of all time. The bay colt's earnings rose to \$1,100,365. Citation previously had been the leader with earnings totaling

\$1,085,760. Nashua broke the record after racing 24 times. The colt raced six more times and concluded its career with an earnings record of \$1,288,565. In three years of racing, Nashua made 30 starts and won 22, placed second four times, third once and ran out of the money only three times.

3,000 Winners for Jockey Neves

Ralph Neves, 38-year-old jockey, rode his 3,000th winning race in 1957 to become the fifth rider in U. S. turf history to

reach that mark. The others are Johnny Longden, Eddie Arcaro, Ted Atkinson and Johnny Adams.

HARNESS RACING

OLIVER WENDELL HOLMES, the famous Autocrat of the Breakfast Table, wrote that the running horse was a gambling toy but the trotting horse was useful and, furthermore, "horse-racing is not a republican institution; horse-trotting is." Oliver Wendell Holmes was a born and bred New Englander and New England was the nursery of the harness racing sport in America. Pacers and trotters were matters of local pride and prejudice in Colonial New England and, shortly after the Revolution, the Messenger and Justin Morgan strains produced many winners in harness racing "matches" along the turnpikes of New York, Connecticut, Rhode Island, Massachusetts, Vermont and New Hampshire.

There was English thoroughbred blood in Messenger and Justin Morgan and, many years later, it was blended in Rysdyk's

Hambletonian, foaled in 1849. Hambletonian was not particularly fast under harness but his descendants have had almost a monopoly of prizes, titles and records in the harness racing game. Hambletonian was purchased as a foal with its dam for a total of \$124 by William Rysdyk of Goshen, N. Y. and made a modest fortune for the purchaser.

Trotters and pacers often were raced under saddle in the old days and, in fact, the custom still survives in some places in Europe. Dexter, the great trotter that lowered the mile record from 2:19 $\frac{3}{4}$ to 2:17 $\frac{1}{4}$ in 1867, was said to handle just as well under saddle as when pulling a sulky. But as sulkies were lightened in weight and improved in design, trotting under saddle became less common and finally faded out in this country.

Record Earnings by Harness Horse

Adios Harry, six-year-old pacer owned by J. Howard Lyons of Greenwood, Del., became the No. 1 money-winning harness horse in history on Sept. 7, 1957. A \$5,000 purse won that night at Roosevelt Race-

way, Westbury, N. Y., put Adios Harry's earnings at \$334,510. The previous high for a harness horse was \$332,363, earned by Pronto Don, a trotter who raced from 1947 through 1955.

HISTORY OF TRADITIONAL HARNESS RACING STAKES

The Hambletonian

Three-year-old trotters. One mile. Raced at Syracuse, N. Y., 1926, 1928; at Lexington, Ky., 1927, 1929; at Goshen, N. Y., 1930-42, 1944-56; at Yonkers, N. Y., 1943; at Du Quoin, Ill., 1957.

1956	Noble Adios	John Simpson	2:00 4/5	52,666.05

(a) By Royal Chief. (b) By Newport Chief. (c) By Phantom Lady. (d) By Dottie's Pick.

1957 LITTLE BROWN JUG

Raced in two divisional heats and a final; first five in each heat raced again in final. The results:

Torpid, 1-1; Meadow Lands, 1-5; Morris Eden, 2-4; Adios Express, 5-2; Maxine's Dream, 3-3; Newport Judy, 2-9; Great Adios, 3-8; Meadow Rhythm, 4-7; Duke of Wellington,

4-10; Razzle Dazzle, 5-6. Times—First division, Torpid 2:00 4/5. Second division, Meadow Lands, 2:01. Final, Torpid, 2:03 2/5.

Winner, Torpid, driven by John Simpson, owned by Max Hochberg. Winner's purse—\$27,205.41.

Standard Measurements in Sports

BASEBALL

- Home plate to pitcher's box—60 feet 6 inches.
- Plate to second base—127 feet 3 $\frac{3}{8}$ inches.
- Distance from base to base (home plate included)—90 feet.
- Size of bases—15 inches by 15 inches.
- Pitcher's plate—24 inches by 6 inches.
- Batter's box—6 feet by 4 feet.
- Home plate—17 inches by 17 inches, cut to a point at rear.
- Home plate to backstop—Not less than 60 feet.
- Weight of ball—Not less than 5 ounces nor more than 5 $\frac{1}{4}$ ounces.
- Circumference of ball—Not less than 9 inches nor more than 9 $\frac{1}{4}$ inches.
- Bat—Must be round, not over 2 $\frac{3}{4}$ inches in diameter at thickest part, nor more than 42 inches in length, and of hardwood in one piece or laminated.

FOOTBALL

- * Length of field—120 yards.
- Width of field—53 $\frac{1}{3}$ yards (160 feet).
- Height of goal posts—20 feet.
- Height of crossbar—10 feet.
- Width of goal posts—18 feet 6 inches, inside to inside, and not more than 19 feet 2 inches, outside to outside.
- Length of ball—11 to 11.25 inches (long axis).
- Circumference of ball—21.25 to 21.50 inches (middle); 28 to 28.5 inches (long axis).
- * Includes 10 yards of end zone on either side.

LAWN TENNIS

- Size of court—Rectangle 78 feet long and 27 feet wide (singles); 78 feet long and 36 feet wide (doubles).
- Height of net—3 feet in center, gradually rising to reach 3-foot 6-inch posts at each side of court.
- Ball—Shall be more than 2 $\frac{1}{2}$ inches and less than 2 $\frac{5}{8}$ inches in diameter and weigh more than 2 ounces and less than 2 $\frac{1}{16}$ ounces.
- Service line—21 feet from net.

BOWLING

- Alley dimensions—Overall length 62 feet 10 $\frac{3}{16}$ inches, measuring from foul line to pit edge (not including tail plank), with $\frac{1}{2}$ inch tolerance permitted. Foul line to No. 1 pinspot 60 feet, with $\frac{1}{2}$ inch tolerance permitted. Alley bed width, not less than 41 inches, nor more than 42. Approach, not less than 15 feet. Gutters, not less than 9 inches nor more than 9 $\frac{1}{2}$ inches wide.
- Ball—Circumference, not more than 27 inches. Weight, 10 pounds minimum, 16 pounds maximum. Balance, tolerance of 3 ounces between top finger hole,

side and bottom. One ounce tolerance between right and left sides. One ounce tolerance between front and back sides.

GOLF

- Weight of ball—Not greater than 1.620 ounces.
- Size of ball—Not less than 1.680 inches in diameter.
- Velocity of ball—Not greater than 250 feet per second.
- Hole—Shall be 4 $\frac{1}{4}$ inches in diameter and at least 4 inches deep.
- Clubs—No restrictions on the size; 14 is the maximum number permitted.

ICE HOCKEY

- Size of rink—200 feet long by 85 feet wide (desired size).
- Size of goal—6 feet wide by 4 feet in height.
- Puck—1 inch thick and 3 inches in diameter; made of vulcanized rubber; weight—6 $\frac{1}{4}$ ounces (unofficial).
- Length of stick—Not more than 53 inches from heel to end of shaft nor 14 $\frac{3}{4}$ inches from heel to end of blade. Blade should not exceed 3 inches in height, except goalkeeper's stick, which shall not exceed 3 $\frac{1}{2}$ inches in height except at the heel, where it must not exceed 4 $\frac{1}{2}$ inches.

BASKETBALL

(National Collegiate A. A. Rules)

- Playing court—94 feet long by 50 feet wide (maximum dimensions).
- Baskets—Rings 18 inches in inside diameter, with white cord nets, 15 to 18 inches in length. Each ring is made of metal and is not more than $\frac{5}{8}$ of an inch in diameter.
- Height of basket ring—10 feet.
- Weight of ball—Not less than 20 ounces nor more than 22.
- Circumference of ball—No greater than 30 inches and not less than 29 $\frac{1}{2}$.
- Free-throw line—15 feet from the face of the backboard.

BOXING

- Size of ring—The matches take place in an area, not less than 18 nor more than 20 feet square. It is enclosed by three 1-inch covered ropes. The floor has a 2-inch padding that extends at least 6 inches beyond the roped area in the case of elevated rings and 3 feet if the ring is at floor level.
- Gloves—In professional fights, 8-ounce gloves generally are used, except in title contests, where 6-ounce gloves are the custom. A.A.U., 8 ounces up to welter-weight, 10 ounces in heavier divisions. Colleges, minimum of 12 ounces.

U. S. Dog Team Victor

Dog teams from the United States placed first and second in a world championship dog derby held at The Pas, Man., in 1957. Dr. Roland Lombard of Auburndale, Mass., won first prize by driving his Siberian huskies over the 120-mile route in 9 hours 30 minutes 36 seconds. Emile Martel, driving a team for the Briar Patch Farms of Putney, Vt., was second.

East Triumphs in N.B.A.'s All-Star Game

The East defeated the West, 109 to 97, in the National Basketball Association's seventh annual All-Star game in Boston on Jan. 15, 1957. It was the East's fifth victory in the series. Bob Cousy and Neil Johnston were the stars in the triumph, Cousy winning the game's most valuable player trophy for his all-around performance. Johnston was the victor's high scorer with 19 points.

Dec. 17 to Dec. 17—60 Straight Victories

A collegiate record of sixty consecutive victories by the University of San Francisco basketball team began and ended on the same day, December 17. The Dons won the first game in the string on Dec. 17, 1954, beating San Diego State, and were toppled by Illinois on Dec. 17, 1956. Immediately prior to the Illinois defeat, San Francisco was beaten by the 1956 U. S. Olympic championship team but that game did not affect the streak since it was an exhibition against a non-collegiate opponent.

LeBel Retains Barrel Jumping Title

Leo LeBel, Hartford, Conn., retained his world barrel jumping on ice skates championship at the seventh annual competition at the Grossinger (N. Y.) Country Club in 1957. LeBel cleared 16 barrels for a distance of 26 feet 5 1/2 inches. Terry Browne, Detroit, was runnerup. He hurdled 15 barrels for 24 feet 2 1/2 inches. Paul Bonafe, Lauzon, Que., placed third with a leap over 14 barrels for a distance of 22 feet 11 1/4 inches.

Pitching (wins)—Jim Bunning, Detroit (20); Bill Pierce, Chicago (20); Tom Sturdivant, New York (16); Dick Donovan, Chicago (16); Tom Brewer, Boston (16)

Strikeouts—Early Wynn, Cleveland (184); Jim Bunning, Detroit (182); Connie Johnson, Baltimore (177); Bill Pierce, Chicago (171); Bob Turley, New York (152)

Musial Breaks NL Record

Stan Musial of the St. Louis Cardinals set a National League record in 1957 for consecutive games played. His string of 895 surpassed the old mark of 822 set by Gus Suhr of the Pittsburgh Pirates in the years 1931 to 1937. The late Lou Gehrig of the New York Yankees created the major league record of 2,130 games.

One No-Hitter in '57

Bob Keegan of the Chicago White Sox pitched the only major league no-hit game in 1957. The 36-year-old righthander turned back the Washington Senators, 6 to 0, in the second game of a twilight-night doubleheader at Chicago on Aug. 20.

All-American Amateur Assn.—Leone's Club, Baltimore

SOFTBALL

Amateur Softball Association

Men—Clearwater (Fla.) Bombers
Women—Fresno (Calif.) Hacienda Rockets
Men's slow pitch—Gatliff Auto Sales, Newport, Ky.
Women's slow pitch—Dana Gardens, Cincinnati

National Softball Congress

Men—San Pedro, Calif.

Fangio Wins Florida Grand Prix

Juan Manuel Fangio of Argentina and Jean Behra of France, driving a 4.5-liter Maserati, won the 1957 twelve-hour Grand Prix of Endurance for sports cars at Sebring, Fla.

INDEX

HOW TO USE THIS BOOK

1. For specific information, turn to the Alphabetical Index, page 931.
2. To understand the scope and organization of **INFORMATION PLEASE ALMANAC** read the Table of Contents.
3. Important. This is not *only* a reference book. In addition to the mass of facts and figures, we have included timely and significant articles, prepared by experts and described below.

OPERATION NEWS

DETAILED BACKGROUND and interpretation of major issues in domestic and foreign news. This is a guide that will give meaning to tomorrow's headlines. Keep this section handy when reading your newspaper.

MAN INVADES SPACE

THIS SECTION COVERS PLANS for the International Geophysical Year, what we expect to learn about the earth's atmosphere, the story of the United States Vanguard Rocket and all we know about Sputnik.

CIVIL RIGHTS—THE SUPREME COURT

TURN TO THIS SECTION for a discussion of the history of the Supreme Court, with special emphasis on its role as guardian of civil rights.

DISARMAMENT AND SECURITY

DISCUSSES THE SEARCH for a solution to the armaments race in the light of the struggle between East and West. Explains foreign policies of the U. S. and U.S.S.R. and how they affect the Middle East.

HOW NOT TO LOSE MONEY

SPELLS IT OUT: how much to invest—how often—in what amounts; describes common stocks, government or corporate bonds; mutual funds; explains how to read a stock table.

BREAKTHROUGHS IN SCIENCE

HERE IS AN EXPLANATION of major scientific advances in recent times: atomic energy—its peacetime uses; rockets, jets and the sonic barrier; chemistry—plastics, rubber and fibers; viruses, vitamins and the wonder drugs; automation and many other innovations of the first importance.

RELEARNING MATHEMATICS: ALGEBRA

THIS REFRESHER COURSE in elementary algebra explains the basic concepts and procedures taught today. Designed to help parents help their children.

The following exclusive features of the *Information Please Almanac* are of particular interest to many people:
